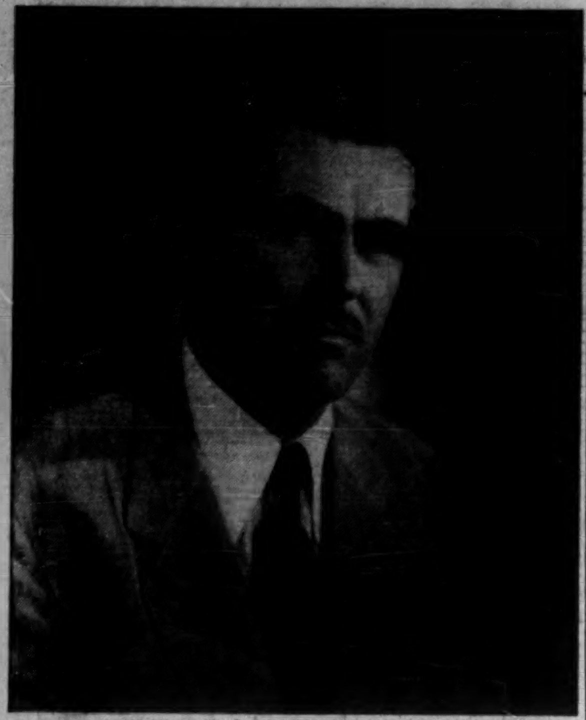
Harbors Head



Maurice Archer, 47, moves up next month to chairman from vice-chairman of the National Harbors Board. NHB manages shipping facilities in 10 ports, spends more than $25 million annually. Mr. Archer brings a wealth of engineering experience from private enterprise and federal service, which he entered in 1952.
(Personality sketch, p. 6)

NATION'S BUSINESS

In Trade Race Too USSR Leads U.S.

Newly published statistics confirm what many Canadians have suspected, that Russia, in the struggle for world influence, is making good use of a weapon that the Americans are deliberately throwing away.

That weapon is trade.

The first Russian trade statistics to be published in 20 years show that the USSR is now the sixth trading nation of the world. She is also one of the world's major exporters of raw materials, sending abroad more than nine million tons of iron ore, 2.9 million cu. yds. of lumber, ten million tons of petroleum products, 310,000 tons of cotton. As an importer, she took 141,000 tons of natural rubber, 91,000 tons of zinc (from Poland), 6.4 million tons of coal. In the field of manufactured goods, Russia has become one of the world's heaviest exporters of machinery and equipment of all kinds.

The cold-war significance of these figures is this: Russia is developing close economic ties with the countries of the communist bloc (which accounts for 76% of Soviet foreign trade) and is extending her economic relationships with other countries. The United States, by her trading policy, is alienating even her closest diplomatic and military allies. Russia is now heavily dependent on foreign trade and has departed widely from the prewar goal of an insulated, self-sufficient economy. The United States, which pays lip-service to the principle of multilateral trade and mutual economic interdependence, is behaving as if the protection of domestic industry were infinitely more important than the maintenance of good relations with its neighbors and associates.

Deliberate Foreign Policy

There is no doubt that Russia is pursuing world trade as part of her general foreign policy. Only last month, Moscow offered to West Germany a bilateral trade pact that would triple the volume of trade between the two countries in three years. Both France and Italy have signed trade pacts with Russia within the past two weeks.

All of these trade pacts are for the exchange of specific commodities at a pegged rouble rate—but in the absence of any other way to increase trade, these NATO countries can hardly afford to reject the Russian proposals. This is the challenge the United States has to meet—and it's just as real a challenge as the sputnik and the ICBM.

Washington should beware of becoming so entranced by the missile race that it loses an even more important struggle.

• • •

Capital Equipment Too

There are lessons for Canada in actions stemming from the difficulties of some of the privately controlled U. S. universities.

These are institutions which, because they wished to preserve their academic independence, have deliberately segregated themselves from the largely publicly-supported state universities. Harvard, Yale, Princeton, Brown are outstanding in this group, but there are some others. Their identifying characteristic is that about two thirds of income comes from private sources—endowments and tuition fees.

No Canadian university is so largely supported by private funds and few approach such a position. Hence, discussion and action aimed at lifting one of these components — tuition fees — has probably gone farther in the U. S. than in Canada.

At Brown University, Providence, R.I., serious consideration is being given to boosting tuition fees to $2,000 a year from the present $1,000; this would cover the cost of the education involved. For those who couldn't pay, a schedule of time-payments would be established over a period of years, to be handled as an interest-bearing loan, either from the university or from a bank or finance corporation.

Some such fee boost by the privately supported U. S. universities is necessary if they are to maintain the status quo, let alone expand to meet requirements of the next few years, says Dr. B. C. Keeney, president of Brown:

"We cannot grow because we cannot pay for what we are doing now. A college in this position cannot admit additional students without going into the red, unless we lower the quality of education or increase our financial resources. We will not lower the quality of education."

How Business Could Help

The state of Massachusetts (wherein are situated Harvard and Mass. Institute of Technology) this year went to the rescue of its colleges by establishing a "higher education assistance corporation." This is simply a guarantee fund for banks or trust companies which are thereby enabled to lend money to students, for long terms, at normal business interest rates. In seven months, the corporation has guaranteed 1,000 loans totaling $453,000; 109 banks and trust companies are lending the money. Eventual goal is $5 million in outstanding loans. And this fund has been contributed by business firms and individuals.

Why shouldn't college education be financed in the same way as houses, automobiles or other capital equipment? Education is capital equipment too.

INFLUENCE HASN'T FADED

Canada-Owned Shipping Still Aids West Indies

Maritimes-Caribbean ships carry vital inter-island trade . . .

By **ERIC RICHTER**

MONTREAL (Staff) — Canada's influence in the Caribbean shows no signs of fading, at least in inter-island shipping.

Our shipping giant—**Saguenay Shipping Ltd.**—is stepping up operations in the Caribbean to fill the void left by **Canadian National Steamships'** strikebound fleet.

The move means:

- **Further consolidation** in the Caribbean of an already strong shipping position for Saguenay Ships.
- **Staving off virtual economic isolation** due to lack of waterborne shipping for the Leeward and Windward Islands in particular; as well as some other members of the new West Indies Federation.
- **For trouble ridden CNS,** probably loss of business if and when the line resumes sailing.

Groundwork for this major extension in Caribbean service was actually laid by Sag Ships in June last year when it inaugurated a southbound liner service from Canadian ports to the Leeward and Windward Islands.

Following the strike against CNS, Sag Ships added a northbound service from the islands to Canadian ports.

This, coupled with a cross run to Jamaica, speeds export and import trade between the islands and Canadian ports; as well as inter-island shipping between the Leeward and Windward Islands themselves and such neighbors as Jamaica.

In all, Saguenay has brought an additional five ships into position to provide the service, which is fortnightly to monthly.

Three of the five have accommodation for refrigerated cargo —efforts are being made by the line to provide additional refrigerated capacity.

While inter-island traffic and shipping to Canada are not large, such trade is vital to the economy of the islands themselves.

On south-bound shipments from Canadian ports there is a far larger volume of business as the islands rely heavily on imports.

Unlike CNS, Sag Ships is not accepting deck passengers on its Caribbean runs.

These are passengers—for the most part local residents travelling from one island to another —who buy passage entitling them to "camp" on the ship's deck.

The big loser in the picture at present appears to be CNS whose Caribbean fleet is lying at anchor, strikebound, in Halifax harbor.

Sag Ships having spent considerable effort and money to organize the Caribbean services is unlikely to abandon its new routes if and when CNS resumes sailings.

Even if CNS manages to resolve its present difficulties, it appears probable a good portion of its former business in the islands will have been lost permanently.

Living Costs Leveling Out, May Start New Downturn

By **DALTON ROBERTSON**

Living costs appear to have leveled out and may even be on the downturn.

For the second successive month, Canada's official consumer price index has shown a decline.

At the beginning of December, it registered 123.1, down one-fifth of a point from a month earlier (1949=100). This followed a one-tenth of a point easing during the previous month.

These declines are not big. To some extent they reflect seasonal trends.

But they are stirring up talk that this is the turning point as far as living costs are concerned.

In the comparable period last year, prices advanced four-fifths of a point.

With only one exception, these are the first month-to-month decreases in 20 months.

Since mid-1956, living costs as measured by the index have jumped 5.6% with all consumer price categories except clothing contributing. In 1957 alone, the increase was 2.2%.

Backing the view that consumer prices will slip is the fact that wholesale prices have eased substantially over the past several months.

These decreases, it's contended, are now working through to the retail level.

After a fairly long and steady climb, the wholesale price index where 1935-39=100 reached a peak of 229.4 at the beginning of 1957. (If 1949 is taken as the base year, prices reached 115.7).

Since then, wholesale prices

(Continued on page 8, col. 3)

Big Need Still for Grads But They're Politer Now

By **LESLIE WILSON**

Canadian industry isn't putting the same steam into the winter university recruiting drive that it did last year.

- **But there'll still be** more jobs than graduates.
- **Starting salaries will be** equal to, or slightly higher, than last year's record average $385 for engineers, $350 for commerce grads.
- **Demand for mathematicians,** several types of engineer and for commerce grads seems as brisk as ever.
- **And companies are finding** students not so nonchalant as before.

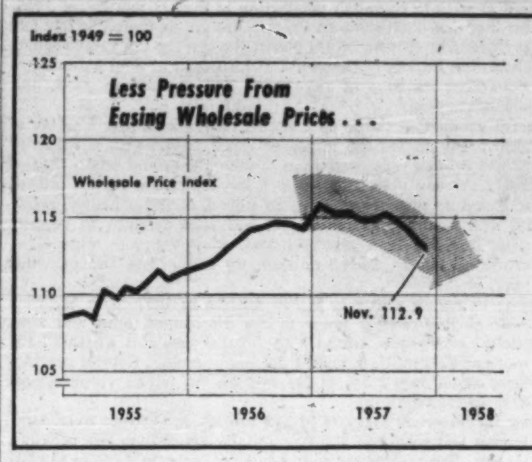
These conclusions come from an **FP** spot check of university placement officials.

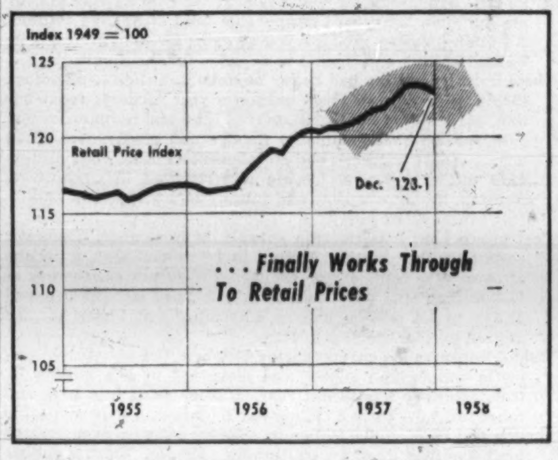
Industrial recruiting on Canadian campuses in recent years has started in October, continued until March. Thus it's now possible to gauge the slackening in demand.

Last year, 180 companies recruited at McGill. This year the number will probably be closer to 150. At Queen's, 150 recruited in 1956-57; the figure will probably be about 135 this year. McMaster figures are 75 and 70.

Many companies have abandoned recruiting plans. Twenty who appeared in former years at Toronto won't be there this year.

"The result," say the placement men, "is that where there were two or three jobs for every student last year, there will be only one or two this year. But everyone will get placed."





Thorium Sweetens Uranium Profits?

By **FRANK KAPLAN**

Canada's mushrooming uranium industry, plagued with uncertainties over markets for the atomic mineral, is branching out into new fields that could have major significance for its future health.

What could prove to be an important signpost in the growth of the uranium industry occurred this week.

It was a move by the giant **Rio Tinto** organization and **Dow Chemical** aimed at production of thorium and rare earths from Blind River area ores.

Behind the bald announcement of formation of **Rio Tinto-Dow Ltd.,** is believed to be a program shrouded in military secrecy. The full significance will become apparent only as it moves into high gear.

It will likely involve extensive construction of new plants in the Blind River-Elliot Lake area.

And the move is believed linked to production in the U. S. of a high-temperature resistant alloy that will have special application for the skins of high-speed aircraft up to 1½ times the speed of sound. It would also be used for compressor casings of jet engines.

Of key significance are these possibilities:

- **A new industry for Canada** and extraction of new minerals.
- **Higher profits for the mines** as a result of extraction of by-products.
- **A better competitive position for uranium mines.** By-product income could help carry the mines through a period of building-up of peacetime uranium markets.

Right now, much of the potential of the new organization can only be speculation. Market for thorium is still quite limited. Dow has been a pioneer in developing uses and markets.

But it is significant that **Rio**

Clip them out now for future reference.

READY FOR FIGHT

Key Labor Clash In Pulp, Paper?

Management dug in for battle against costs . . .

By **CLIVE BAXTER** and **JACK McARTHUR**

MONTREAL (Staff)—With sales slower and profits lower, the pulp and paper industry is heading toward one of the nation's vital clashes between labor and management in 1958.

▶ **Management is setting itself for a hard fight** this spring in Eastern Canada against higher labor costs.

▶ **The unions may decide upon moderation**—if leaders can persuade their members to take it easy in 1958.

This ranks in importance with the upcoming auto industry contract talks; and with the non-operating rail unions' current tiff with the railways.

Some 50,000 workers are involved in Eastern Canada. The B. C. industry erupted late last year into a 6,000-man strike which still continues.

The industry itself is a $1,500 million giant, with a billion-dollar-plus export business. Its health is essential to Canadian prosperity.

Another indication of the importance of the pulp and paper dispute: The attitude of labor in this and other major contracts this year will set the tone of Canadian labor relations.

The atmosphere surrounding the big disputes will be the clue to the national trend.

There's a slim hope that pulp and paper companies may find the unions less demanding this year than earlier indications suggested.

Feeling in labor circles now is that contract demands—due early in April—will be low on wage increases, though still possibly severe on fringe benefits.

Contracts throughout most of the industry come due May 1.

International Brotherhood of Pulp, Sulphite and Paper Mill Workers **is holding two meetings early in March to decide on demands for Central and Eastern Canada.**

First of these will be at Fort Frances, Ont.; second at Quebec City two weeks later.

Terms settled at those meetings will almost certainly be adopted by the United Paper Makers and Paper Workers. Both are Canadian Labor Congress affiliates and work closely together.

(Some observers see danger

(Continued on page 8, col. 1)

Outlook Fair For Heftier China Trade

OTTAWA (Staff)—Canadian raw materials for Communist China?

The prospects are at least fair that some firms in this country will be able to make satisfactory deals.

This is the general conclusion to emerge from reports on a visit to China by the Canadian trade commissioner to Hong Kong.

Some others:

- **The Chinese deal only** through their state trading corporations' head offices and branches.
- **They have the dollars,** prefer to pay cash.
- **And they must know all about** your product before they buy.

Experts here won't guess how much additional business can be done. But since Canada-China trade now amounts to only about $8 million a year, it is agreed the Canadian share of China's $900 million non-Communist trade can be increased.

And Ottawa puts no obstacle in the way of the export of non-strategic items in good supply. Details, p. 24.

Ottawa Plans 'Make Work' Projects for '58 and '59

OTTAWA (Staff)—The Conservative government's spending estimates for fiscal 1958-59 (its first) will include lots of money for possible "make-work" projects for early '59.

And in the present year, it is bringing forward as many projects as possible to ease the unemployment in the weeks ahead.

Some were already set for fiscal '57-'58; others not due before '58-'59.

Public Works and Transport departments' design and engineering staffs are straining to ready every possible project for tender.

Estimates to March, 1958, prepared by the former Liberal government, contained a number of votes for public buildings and other works more political than practical.

Ordinarily they would not have been pushed, and so when the Conservatives took over they found no plans drawn up for them, and six months of lead time needed before action.

The Conservatives hope this pushing ahead will mitigate the impact of this winter's unemployment, but they know that by February-March at least 500,000 persons will be without jobs and seeking work by the DBS count.

They do not plan now to extend aid to the unemployed beyond these key 1957 changes:

- **Longer seasonal** benefit periods for unemployment insurance. A month has been added before January 1 and after April 15.
- **Promise to share** with provinces all local relief costs for uninsured unemployed.

Latest count (December 19) of unplaced applicants for jobs at all National Employment Service offices: 629,000—276,000 higher than the comparable week a year ago.

But the count does not provide any useful comparison with previous years.

More persons register every time insurance benefits are extended.

And the 1957 changes, which also added fishermen and more married women, probably account for nearly half the increase.

The expected winter peak of 750,000 or more unplaced applicants will sound worse than it is.

It actually represents only a slightly higher proportion of the labor force than the peak 1955 figure.

(Details, p. 18.)

THE SIGNS AND PORTENTS

PREDICTION — from a mining engineer, making special studies of Canadian iron ore properties: "In 10 years, all iron ore sold to steelmakers will have been processed." Increasing demand for high-grade, treated ores is a major trend to watch.

* * *

NOTE THE increasing worry of municipal governments, unable to keep good staff. City of Montreal employee turnover in the latest fiscal year was a record 2,379. Solution? Higher pay (and higher taxes) probably.

* * *

BIG EXPANSION is planned in Canada by **Renault,** France's biggest auto maker (220,000 cars a year). A factory team is arriving soon to gear up the sales organization here. In the U. S. last year, Renault sold 27,000 cars. Price here is $1,845 for four-cylinder, 845cc Dauphine.

DYNAMIC obsolescence has an inevitable consequence: Anxiety of manufacturers to prove that their products have genuine quality. Hard on the heels of the adequate wiring campaign and "bonded" heating units, the clay brick manufacturers are now coming up with a seal for walls built of genuine burnt clay bricks.

* * *

IMPRESSED BY estimates that hunting and fishing may be a $750 million business in Canada, Quebec is conducting a survey of the spending habits of sportsmen. Result may be a more coherent government policy.

* * *

LOW-PRICE textile imports worry other manufacturers apart from those in Canada. In the U. K., for the first time in 200 years, cotton textile imports recently exceeded exports. But no change in the preference system is likely.

LABORERS and lower-level white-collar workers most often produce intellectually gifted children. This discovery was reported at the recent annual meeting of the American Association for the Advancement of Science (where Sir Ronald Fisher commented on cancer.)

* * *

YOU MAY NEVER have to make another speech (in public) if the methods of the Winnipeg Sales and Advertising Club catch on. Their scheme: Asking big name speakers to send them tape recordings. Club members will be sitting around the play-back machine once a week, starting Jan. 16.

* * *

FEET OF shoe salesmen are likely to be quite fashionably clad in 1958. The Shoe and Leather Council of Canada is devoting part of a $10,000 trade promotion to ensuring that retail shoe salesmen are not down-at-heel.

* * *

CANCER and smoking controversy has a new angle. Britain's "father of modern statistics," Sir Ronald A. Fisher, claims available figures are not adequate to prove a cause and effect relationship.

* * *

GRAIN ELEVATORS in Montreal and Quebec are soon to be fitted with suction unloading equipment. Four are to be installed early this year, two in each port, at a cost of about $1 million. Main advantage is faster ship turnaround.

* * *

NEXT WEEK the Federal Communications Commission in the U. S. is going to watch a closed circuit TV demonstration of subliminal advertising. It may be allowed on TV. But there's only a remote hope that all commercials in future will be invisible and inaudible.

Stock Market Highlights

Industrials

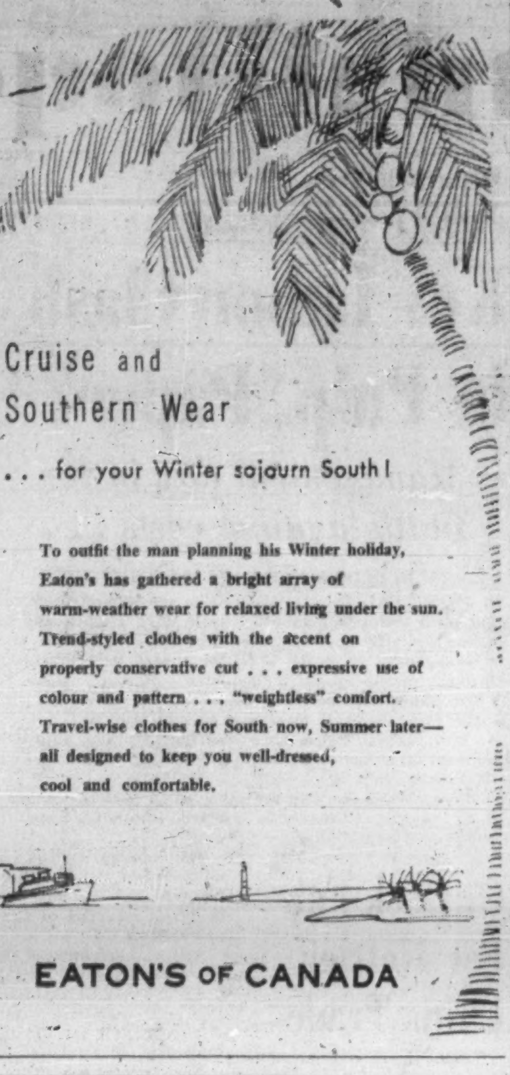
Canadian **industrial** stocks climb for broad gains, recovering a substantial amount of previous losses in steady week-long recovery period. For details see p. 5.

Mines and Oils

Mining and **oil** stocks follow the general market pattern to higher levels, with buying interest centred chiefly in the oil list. For details see p. 39.

Uranium issues are a feature, showing strongest gains among mines. **Blind River** issues lead on report of thorium plant possibility.

Western **oil** and **gas** stocks attract buying with leaders pacing the advance. Gas issues strong on speculation of an expected Ottawa announcement to permit exports.



Cruise and
Southern Wear

. . . for your Winter sojourn South!

To outfit the man planning his Winter holiday, Eaton's has gathered a bright array of warm-weather wear for relaxed living under the sun. Trend-styled clothes with the accent on properly conservative cut . . . expressive use of colour and pattern . . . "weightless" comfort. Travel-wise clothes for South now, Summer later—all designed to keep you well-dressed, cool and comfortable.

what will
SYNTHETIC
RUBBER
achieve next

High on the list of new materials and new processes which are changing the shape of the world is synthetic rubber.

For instance: Synthetic rubber has made possible the development of collapsible tanks for cargo vessels to enable both liquid and solid cargos to be carried in the same vessel. Other collapsible containers, made of synthetic rubber can be used to transport free-flowing materials by truck, train or plane.

Or again, for instance: There's a new upholstery material which contains its own feather-soft cushioning. Synthetic rubber foam sponge is permanently bonded to a colourful vinyl and cotton covering. Result—a comfortable, long-wearing and economical upholstery.

The shape of things present and of things to come is increasingly affected by the new product values which varied forms of synthetic rubber make possible. And one of the world's major factors in the development and manufacture of these rubbers is the Polymer Corporation, whose *Polysar rubbers are known and used in every country in the free world.

Trend of Business

Living costs decline for second month in a row. The consumer price index eased one fifth of a point to 123.1 at the beginning of December, largely due to a drop in food prices. Lower prices were noted for eggs, bacon, lettuce, fresh fruits, coffee, tea and sugar. Reduced food costs also caused the index to decline to 123.3 at the start of November from the previous month's record high of 123.4. At the beginning of 1957 the index stood at 120.3.

Record growth in Canada's population in first 11 months of 1957. An increase of 516,000 boosts total to an estimated 16,860,000 at December 1, from 16,344,000 at the start of the year, reports Dominion Bureau of Statistics. This compares with a January-November increase of 389,000 in 1956, 385,000 in 1955, and 402,000 in 1954.

Mineral production value up 2.5% in 1957, continuing a series of uninterrupted annual increases since 1944. Year's value of $2,134 million was more than double 1950's and triple that of 1947. Among major minerals a large increase in the output of uranium plus lesser gains in nickel, silver, asbestos, crude oil and natural gas more than balanced declines in copper, gold, iron ore, lead, zinc and coal. Most valuable mineral?—crude oil, worth $444.8 million, up 9.4% from the previous year.

Decline in metals value to $1,136 million in 1957 from $1,146 a year earlier reflects lower prices for copper, lead and zinc. Nickel production, up 5.4% to 188,000 tons and worth 17.5% more at $261 million, topped the list of metals. Copper production, down only 2.5% to 692 million lb., fell in value almost 32% to $199 million.

Labor income rises 5.4% to $1,342 million in October over same month last year, but was fractionally lower than the previous month. Ten month wages and salaries were up 8.3% to $12,751 million from last year's comparable total of $11,771 million. All main industry groups reported gains for the year-to-date, but agriculture and mining were down for the month.

These industry groups had larger payrolls in October: manufacturing, $401 million ($394 million a year earlier); construction, $116 million ($114 million); utilities and communication, $346 million ($324 million); finance and government, $335 million ($294 million); and supplementary labor, $46 million ($43 million). Lower income was reported in agriculture, forestry, fishing, trapping and mining as a group, $98 million ($104 million last year).

Coal production, imports drop sharply in November. Domestic output for the month amounted to 1.3 million tons, a decline of over 14% from a year earlier. Ten-month production of 11.8 million tons was down 11.4%. Landed imports dropped 35.5% to 1.4 million tons in November and 11.4% to 19.4 million tons for the year to date.

Rubber consumption shrinks during October. Use of natural, synthetic and reclaim rubber was down 9% to 20.5 million lb. from the same month last year. Rubber going into tires and tubes fell 9.2% to 13.8 million lb.; that used in wire and cable dropped 17.3% to 0.6 million lb. Makers of footwear accounted for 1.9 million lb., 3.5% less than a year ago. Natural rubber made up 40.4% of the total consumed in the month compared with 43.6% a year earlier.

A look next door. U. S. steel ingot production down nearly 40% from a year ago, reports Dun & Bradstreet in weekly trade review. Coal production running more than 7% ahead of same week last year; electric power output up 2%. Wholesale food prices showed an increase of 3% over the year. Bank clearings were up 2.2% and business failures 4.6% less than a year ago.

Bottoms Up!, and so are beer sales. Canadians drank 689,110 bbls. of beer in November, a 1.2% increase over the 680,826 bbl. downed in the same month last year, reports Dominion Brewers Association.

$3.1 Million Water Pipeline Project For Ont.

Work on Ontario's first major water pipeline project—involving the towns of Leamington and Essex and the townships of Mersea, Gosfield North, Gosfield South and Maidstone — will get under way shortly.

The project is expected to cost more than $3.1 million. The system will start at an intake pipe in Lake Erie near Union.

There will be an intake well and low lift pumping station near the water's edge together with a filtration plant in the immediate vicinity.

The plant will have an initial capacity of 8 million gal. daily with provision made for an ultimate capacity of up to 30 million gal. daily.

From the plant there will be a large distribution main from Union to Ruthven, with two smaller mains from Union to Leamington.

The distribution main will continue to Essex from Ruthven at reduced size, with a booster station in the vicinity of Cottam.

The project is being carried out by the Ontario Water Resources Commission.

Look For It Here

FIRST CLASS FARE —
for men going South —
and going formal

For light and bright formal wear to suit your holiday mood — see the selection at Simpson's — The Store for Men. You'll find trimly tailored dinner jackets as crisp as a new dollar bill in sparkling white, or suited to a festival occasion in red, grey, blue or gold — and as light as you like. Each, $45 and 49.50

Simpson's
The Store for Men
Second Floor, Bay Street End

Simpson's Stores are located at Toronto, Montreal, London, Regina and Halifax.

Anglo-Cdn. Tel. Increases Divd. On Class 'A'

Anglo-Canadian Telephone Co., Montreal, has announced an increase in the dividend on the company's Class A stock to 30c per share, payable March 1, 1958, to stockholders of record Feb. 10, 1958. Company owns about one-third of **British Columbia Telephone shares.**

President Thomas A. Boyd says directors want to put the Class A stock on an annual basis of $1.10 per share, and that due to certain requirements of the company's charter, 30c per share would be declared and paid in each of the first two quarters of the year, and 25c per share in each of the remaining quarters, if then existing conditions warranted such action.

The previous dividend on the Class A shares was at the rate of 60c paid quarterly.

After payment of a dividend equal to 6% on the Class A shares ($10 par) in any year, Class A and the deferred stock rank share for share as a single class, for payment of any further dividends in the year. The announcement regarding the A stocks suggests that 50c a share will be paid on the deferred shares in 1958.

There are 4,871,000 Class A, and 2,000,000 deferred shares outstanding. Company is controlled by **Automatic Electric Co.,** Chicago.

Spotlight on Politicians

Governments are people: What are Canada's new leaders like?

● How are the former Tory unknowns shaping up?

● How changed will the Liberals be when Mr. St. Laurent follows Mr. Howe into retirement?

● Is 'Mike' Pearson sure to take over?

In this concluding part of a special New Year report, Michael Barkway brings you a close-up of Ottawa's goings-on, of special interest because of the Liberal leadership convention Jan. 14-16.

By MICHAEL BARKWAY

Meet the 1958 men at the top:

Conservatives:

● **John Diefenbaker's** dominance has proved every bit as complete as was foreseen in FP's first close look at him (June 22, 1957). Observation has also provided answers to some of the questions which no one could answer in June.

His most wholehearted admirers are, perhaps, the other politicians who suffer from his uncanny skill in "putting himself across" to the public. Intellectuals may squirm; but unless the politicians on all sides are wrong, Diefenbaker has made hardly any boners in his relations with the mass of Canadian voters.

He has also proved to be **tougher in physical endurance, and more hard-boiled mentally, than some people had suspected.**

The pace he has been going ever since June has been killing. It was not surprising that he could not shake off the cold which hit him about two months ago; and the short trip to Nassau after Christmas was badly needed.

But it's not only in body that he's proved tough. His appointments have been marked by great shrewdness, and have shown almost no sign of the personal animosities and affections which had been feared.

His personal feelings — even more sensitive and sentimental than Mackenzie King's — have been subordinated to political convenience. He may yet prove to be as cold-blooded as King. There are no firings to prove it yet, but a number of smaller signs point this way.

The administrative load, for which he had no preparation in earlier experience, is also being carried in Mackenzie King's way. The administration waits upon his convenience.

Through some mysterious political antennae he makes up his own order of priorities. He deals with each problem as he's ready for it.

This inevitably means that at any given moment there are great gaps in his information. Problems which many people may consider extremely pressing get put to the bottom of the list, as he reaches a half-conscious judgment that he will not lose votes by letting them wait.

Art of "Waffle"

If he's questioned on such subjects, he is a past-master at the politician's art of "waffle." His waffles so often involve the highest principles that they have become known as "omelettes aux principes."

Just before Christmas the Prime Minister returned from the NATO meeting in Paris. Immediately he drove to the House of Commons, and gave a report without text. Then he held a press conference. Finally he gave a radio and TV talk about NATO, peace and Christmas.

The report to the House prompted Mr. St. Laurent to say: "It is not enough to state objectives . . ." And Mr. Coldwell said: "My heart sank, because I could find nothing concrete . . ."

Some people who were close to the NATO meeting realized that the PM had not grasped details of its real business. As on other occasions when he may seem not to be on top of a subject, it isn't for any lack of mental ability. On the contrary everyone expresses amazement at the quickness of his mind. **But it moves in an orbit like sputnik; and its orbit is political.**

Even amid the splendors and complexities of the Paris meeting Mr. Diefenbaker did not forget the Canadian voters of Ukrainian, Polish and other eastern European origins. His one contribution to the lengthy NATO communique was a couple of sentences about them, which went well in his TV reports to the nation.

With few exceptions, the other Cabinet ministers have given a good account of themselves in the House of Commons.

• • •

● **Howard Green** is a genial House leader, and deals with his questions competently. Both his departments—Public Works and Defense Production—have found him a good administrator. He is also responsible for CMHC, and has scored a major success in the revival of housebuilding.

• • •

● **Douglas Harkness** has got on well with the difficult Ministry of Agriculture. He has had a tough time over price supports and has had to yield a bit further than he evidently hoped in moving toward a parity system. But he has kept his end up in Parliament; and is welcomed as one of the "discoveries" in the new government.

• • •

● **George Pearkes** got into a little trouble with questions about the combined U. S.-Canada defense command, and the PM tried to rescue him. Nobody on either side has yet given a comprehensive and intelligible public account of this business. But it is very difficult for anyone to be angry with Mr. Pearkes: He is so invariably polite, conscientious and honest.

• • •

● **Donald Fleming** has got into more trouble than anyone else. It's partly because of his own truculence. Not from Fleming will you hear the soft answer that turneth away wrath. But it's partly the spots on which he has been landed through no fault of his own.

An example of this was the famous press conference with Peter Thorneycroft at Mont Tremblant, when Mr. Fleming found himself unable to say anything about the U. K.'s proposal for Anglo-Canadian free trade. He could have said plenty if Diefenbaker had not been hanging onto this baby so tightly.

Another example was the parliamentary procedure adopted for presenting tax reductions without a budget. The decision not to have a budget, because it would mean eight days' debate, was a Government decision, Mr. Fleming as Finance Minister would probably have been quite ready to present one. But he took the whole rap.

• • •

● **Gordon Churchill** at Trade and Commerce has been luckier. He has been away a lot—first looking for wheat sales, and second with the Trade Mission to U. K. He is also a smoother speaker with an air that is generally friendly rather than truculent.

Mostly you remember that he was a schoolmaster. But occasionally he sticks his chin out, and you remember he was also a colonel.

He carries his departmental estimates and his major legislation smoothly. But wheat and the U. K. mission seem to have occupied him to the exclusion of wider policy.

This is a pity because he brings to the wider policy problems a more balanced approach than some of his colleagues.

• • •

● **E. Davie Fulton,** carrying both the Ministry of Justice and the Department of Immigration, has won golden opinions both in the House and outside. Since he is not yet 42, he is by far the best long shot if you want to take a flyer on a future Prime Minister.

• • •

● **Sidney Smith** has not sailed into the position of Secretary of State for External Affairs with such immediate authority and ease as was expected. After his unfailing success at mastering every other kind of audience, it was a surprise that he has not seemed more at ease either in the House or the External Affairs Committee.

Perhaps the methods and manoeuvres of government are more strange to people from business or the universities than most of us realize. Adaptation may take a little longer than we are apt to expect.

• • •

● **George Hees,** at Transport, was the first target of the Liberal opposition at the beginning of the session when they thought they were going to have a field-day making the Tories look silly. When he had rocked Chevrier (and others) back on their heels about half a dozen times, they began to think it couldn't be mere luck. They have not made him look silly yet, and his success is perhaps the biggest surprise of the new ministry.

• • •

The Liberals:

The future policies and personalities of the Liberal party depend on the convention to be held in Ottawa next week.

The new Liberal echelon likely to come to power largely consists of men who really believe that in recent years the Liberal party had drifted away from its proper principles. Many of them readily accept some of the criticisms which opponents have made of the recent St. Laurent-Howe leadership.

Their aim is to find and define a tenable position, to the left of the Conservatives, with national appeal, and without a top-heavy Quebec influence.

One of their problems is the CCF. Can they shove it out? Or has it pre-empted some of the ground they want? (It is no accident that so much of the CCF fire has been directed at the Liberals, equally with the Conservatives, in the present Parliament.)

The Liberals need more than anything the advice of the Saturday night wrestlers.

They want to make an interesting contest although its result is already certain. If Pearson and Martin were wrestlers, it would be a grand show.

• • •

● **Lester Pearson** is almost certain to be the new leader.

• • •

● **Paul Martin** can only stake out his claim to be (a) External Affairs Minister under Pearson, (b) successor - presumptive if Pearson at any time gets fed up or accepts a call to some irresistible international job.

On parliamentary performance in the present session, several booby prizes have been won, but no real prize.

• • •

Mr. St. Laurent has been silent nearly all the time. He made a halting and unimpressive speech at the beginning of the session, and then said hardly anything till the very end. Then he scored—with his reply to Mr. Diefenbaker's report on NATO which recalled his old form.

Mr. Pearson has scored mainly by keeping quiet. He kept his speech-making for the Nobel Committee and the numerous testimonial dinners. But he has carried the honor of his Nobel Peace Prize with just that modesty and air of devotion to high causes which made him a public favorite long ago.

Everyone knew it would be difficult to step into Cabinet shoes after undiluted experience of opposition. But **no one would have guessed how hard it is to move from government into opposition,** until the former Liberal ministers provided a demonstration.

The enjoyment which they expected to get from the freedom of opposition has turned into one bitter lesson: In Government you have the advantage of all the information — without having to work for it.

In opposition you have to discover your information for yourself. (That is why so many questions in the House are based on newspaper reports.)

Former ministers who expected to make it very tough for the Government because they knew so much of the background, have found it extremely difficult to embarrass a new minister with departmental files behind him.

The prize example was immigration. The Conservatives had expected a bad time over their immigration cut-off in July.

• • •

● **Jack Pickersgill** opened the attack, and it sounded very fierce.

Until Mr. Fulton put his hand into a departmental file (now in **his** custody) and read out a small memo showing that in April Mr. Pickersgill had recommended a cut-off on July 31. (Just a prudent interim measure, Mr. P. explained).

• • •

● **James Sinclair, Jean Lesage, Lionel Chevrier** and others have walked straight into similar traps.

Sinclair can do a nice line in satire and denunciation: he has a witty and caustic tongue. But when he launched an attack on the Government for constitutional impropriety, and then said of course he won't vote against it, he sounded quite as absurd as he used to say the Conservatives were in opposition.

• • •

● **All these men,** plus **George Marler,** who gained experience in opposition in Quebec, should be among the top lieutenants after the Liberal convention.

• • •

● **Walter Harris,** who lost his seat last year, will be back among them, it's understood, as soon as he can win his seat back.

The glaring gap is a right-hand man from Quebec—and Liberals, following W. L. M. King, have come to regard this as something that no well-dressed PM is seen without.

Now Quebec provides three leading Liberal figures which does not come to the same thing.

(Lesage is young and judged to lack the necessary prestige; Marler is an Anglican from Westmount; Chevrier is from Cornwall, Ont., though transferred to a Montreal riding.)

Behind the scenes at the Liberal convention the most influential Quebec figure (apart from St. Laurent) will probably be **Maurice Lamontagne.** Some wise Liberals think it may not be long before he is out in front of the scene, standing for Parliament. This could be the first step toward being Quebec leader.

Lamontagne, who was the only civil servant to resign on the change of Government, was brought to Ottawa by Mr. St. Laurent three and a half years ago. Before that he was teaching economics under Father Georges-Henri Levesque at Laval's famous School of Social Sciences, where he incurred almost as much of Mr. Duplessis's displeasure as his superior. He became in some respects one of the closest advisers St. Laurent had in Ottawa.

Since the change of government, he has been teaching at the University of Ottawa and helping with Liberal party problems on the side.

Once the convention is over, the interaction of new personalities and views will largely determine how far the new leader can create, in a short time, the **new, dynamic, liberal Liberal party** which he believes in.

Prices, Supply Now Varied Report Purchasing Agents

Here are some of the predictions from the latest monthly bulletin of the Canadian Association of Purchasing Agents going out to members this month.

Chemicals — Industrial chemicals generally in free supply and in some cases over supply. Highly competitive markets will tend to hold prices around present levels.

Coal — Canadian buyers should find supplies plentiful, prices lower and transportation easy in 1958.

Fuel Oil, Gasoline—No change in situation since November. Mild weather has reduced fuel oil demand.

Metals-Ferrous — Because of drop in business, should not be assumed steel production has fallen so low that everything is available from stock. The 1957 tonnage produced is not too far below the record of 1955.

Metals - Non - Ferrous — Appears to be some disappointment in regard to actual sales compared to earlier forecasts. Deliveries are relatively easy and supply good.

Nickel — Canada has ample stocks and there is no relative change in Canadian consumption.

Newsprint — Present deliveries are excellent and capacity ample. Improved discount on U. S. funds should help producers. A decrease of 4% in 1958 production is anticipated. Newsprint is merely falling in line with the general readjustment in the economy.

CAPA will sponsor a products display in connection with its annual conference to be held June 8-10 at the new Queen Elizabeth Hotel in Montreal. This will be the first such exhibition it has held since the war.

Maclean-Hunter Acquires Another French Publication

Maclean-Hunter Publishing Co. has added another French-language title to its list of merchandising publications.

Purchase of Le Pharmacien, a monthly devoted to the retail pharmaceutical field, was announced this week by Merchandising Group Manager, F. G. Brander. Ownership is effective with the January, 1958, issue.

E. E. Abel, manager of Drug Merchandising and Drug Index, has been named manager of the new publication as well. The drug publications will be offered to advertisers as a national package. Editorial offices for Le Pharmacien will be in Montreal.

The addition of Le Pharmacien gives Maclean-Hunter three English-French publication teams serving important retail markets in Canada.

The others are Canadian Grocer and L'Epicier, Hardware & Metal and Le Quincaillier.

ANNOUNCEMENT

W. G. H. (Gerald) JEPHCOTT

Payne-Ross Limited is pleased to announce the election of Mr. W. G. H. (Gerald) Jephcott as a Vice President. Mr. Jephcott is well known through his many years of active participation in the fields of accounting and finance, and his reputation extends well beyond the Province of Ontario. Educated in Montreal, Mr. Jephcott joined the staff of P. S. Ross and Sons, Montreal, and in 1923 he became a Chartered Accountant of the Quebec Institute. In 1924 he was sent to the Toronto office of his firm as Resident Manager, and later was made a partner, which position he still enjoys. A man of broad interests and capabilities, Mr. Jephcott attended Osgoode Hall Law School and in 1929 was called to the Bar in Ontario.

His professional affiliation with the Institute of Chartered Accountants in Ontario is of long and active duration. In 1939 he was made a Fellow of the Institute, and in 1940 he was elected President. In September, 1957, Mr. Jephcott was an official delegate to the Seventh International Congress of Accountants in Amsterdam. From 1945 to 1951 he was a member of the Board of Governors of the Canadian Tax Foundation, and in 1949 he was Chairman of the Board.

His affiliation with Payne-Ross Limited, Management Consultants, marks still another phase in his busy career.

Payne-Ross Limited offers a full range of management services including methods, systems and procedures improvement, manufacturing cost reduction, domestic and export market expansion, improvement of field sales effectiveness, solutions to personnel and organization problems, and corporate profit improvement programs.

Aluminium's Guiana Plant Ready 1960

MONTREAL (Staff) — Construction period of **Aluminium Ltd.'s** $33 million alumina project in British Guiana (**FP**, Dec. 15, 1956) has been stretched out a year.

(See also p. 14.)

There have been no other changes in the scheme, which will be able to treat some 500,000 tons of bauxite annually.

It's now expected to be operating sometime in 1960, rather than 1959.

Stretch-out decision ties in with a similar stretch-out at the Kitimat smelter of **Aluminum Co. of Canada**, a subsidiary.

Completion of 80,000 tons of ingot capacity has been deferred at Kitimat (**FP**, Nov. 2).

This expansion slowdown reflects the hesitation in the growth of demand for aluminum, plus the appearance of some excess capacity in the industry.

The British Guiana plant will be able to produce 250,000 tons of alumina yearly. Two tons of alumina are needed for each ton of aluminum output.

Shipment of alumina, rather than bauxite, means a considerable saving in transport costs.

Aluminium's decision to complete the British Guiana project in 1960 presumably mirrors a feeling that the uptrend in demand experienced in recent years probably could resume late in 1959 or in 1960.

CANADA POST

Hon. F. E. Gumming-Bruce, succeeds Mr. James Thomson, as deputy High Commissioner for U.K. in Canada. He leaves for Canada early April.

FULL DISCLOSURE By PAUL S. DEACON

These Measures Should Help

Exchanges' New Powers Give Investors New Details

Protecting investors against fringe operators and against their own apathy and greed, is a difficult task.

However, stock exchange authorities this week took steps that should make the present protective walls more secure than before.

The Toronto Stock Exchange has established a whole new information filing procedure which will further the ideal of full disclosure, on which investors can base their investment decisions (details, p. 7).

The Montreal and Canadian exchanges are going to institute similar procedures, it's understood.

The changes will provide new protection, however, only if investors make good use of the additional information that will become available under the new filing statement procedures.

Much of the information which will now be required in statements filed with the exchanges, is already being supplied to the exchanges by listed companies proposing to issue additional shares.

What the new procedures will do, in the main, will be two things:

(1) Make sure that a basic minimum of information is supplied by companies planning "material changes" in their affairs other than share issues; and

(2) Make public immediately the information in all filing statements.

Formalization of existing procedures on share issues, and the publication of information filed, will help provide easier yardsticks for judging the merits of a situation.

Bringing in the concept of "material change" gives exchange officials added powers to enforce full disclosure under all circumstances.

Onus for adequate disclosure is placed firmly on the companies and the individuals and investment firms sponsoring them.

Quite a large number of companies will be exempted from the provisions of the new ruling governing "material changes," mainly because what would be material changes for one company would be completely minor transactions for another. For instance, under the ruling, acquisition or disposition of a mining or oil interest at a price in excess of $25,000 is listed as a material change in the affairs of a listed company.

However, the list of exempted companies does not depend on its being a mining or oil company. Some industrial companies will also be included among those covered by the ruling, and many mines and oils will be exempted.

All companies may be made subject to the ruling at the discretion of the exchange's board of governors.

Mining, Oil Stocks

There will be more mining and oil stocks involved in the change, mainly because there are more of them and because so many of them are relatively small.

In all such restrictions, there is always the danger that red tape will discourage enterprise.

If the information required takes too long to assemble, the market conditions on which the proposed financing or other change were based might change completely and wash out the whole project.

However, TSE officials expect they can handle the filing notices almost as quickly as under present procedures, and they feel that the new filing statement won't involve much difference in the time needed to assemble it.

Undoubtedly there will be objections, and probably some changes made as time goes on.

But from an investor's point of view, chances are greatly enhanced that the information available to him and to his broker will be greater in both quantity and quality from now on.

His main job now: Make good use of it.

Note

By Vincent Egan

Finance Minister Fleming's first long-term borrowing this week met the eager reception that a finance minister longs for.

Almost as soon as the $300 million government-guaranteed **Canadian National Railways** 4% 23-year bonds were offered Tuesday (at 97 to yield 4.20%), a scarcity developed. The bid crept up steadily, to 98 by Tuesday's close.

Dealers generally had been expecting an offering of about $200 million, with a 3¾% coupon priced to yield 4.05%. The more generous terms brought heavy European and U. K. buying for the first time in many years, which helped to strengthen the slipping Canadian dollar on foreign exchange markets.

An offering of $30-40 million collateral trust bonds of **Canadian Pacific Railway Co.** is expected to be made shortly by **A. E. Ames & Co.** and **Wood, Gundy & Co.** . . . Also just around the corner, it is understood, are an Ames offering of **Ontario Natural Gas Storage & Pipelines** (the **Union Gas** subsidiary), and **Dominion Securities'** issue of **Consumers' Gas Co. of Toronto.**

* * *

The $50 million **British Columbia Electric** 5⅛% 30-year issue at par (**FP**, Jan. 4) is now in distribution . . . An offering of **Loblaw Leased Properties** is expected to be made in about a month, by underwriters **McLeod, Young, Weir & Co.** . . . Montreal underwriters **H. C. Flood & Co.**, it is expected, will soon offer 130,000 npv shares of **Alaska-Yukon Pipelines Ltd.**, with warrants, at $5.75.

* * *

Municipals: **Equitable Securities** was successful bidder for the **Ottawa** $3,676,000 4½% one-to-15 year serial bonds; cost to the city was 99.60 . . . **Montreal** Metropolitan Commission has called for tenders on $6,376,000 one-to-20-year serials at a coupon of not more than 5½%.

* * *

Industrial Acceptance Corp. has again made a flat ¼% reduction in interest rates on all of its short-term notes. New rates: 3¾% for 30-89 days; 4¼% for 90-179 days; 4½% for 180-269 days; 4¾% for 270-365 days.

* * *

A syndicate headed by A. E. Ames & Co. has placed privately a $2 million issue of **Neon Products of Canada Ltd.** 6½% promissory notes due Dec. 1, 1972.

* * *

Continuing strength in bonds brought the McLeod, Young, Weir 40-bond yield average down to 4.95% at Jan. 2, from 5.32% at July 2. Yield on provincials averaged 4.60% (5.11% six months earlier); municipals 5.12% (5.61%), public utilities 5.03% (5.21%), and industrials 5.04% (5.37%).

* * *

Commodities: Resumption of the decline in the Canadian dollar premium is good news to grain traders. With the high premium off our crops, our competitive position is expected to be the best in years. The long climb in flax prices has been halted, at least temporarily, by profit taking.

* * *

One view of the market's future:

"The decline in the cost of money with the accompanying improvement in prices of fixed income securities is very much in evidence and does not appear to have by any means completed its movement. These factors should be stimulating to industry, and could logically be followed by a renewal of interest in the stock markets." — Ralph D. Baker, general manager of **James Richardson & Sons.**

114 Stocks Yield Averages 5.46%

The average yield on 114 dividend-paying stocks on the Toronto Stock Exchange, as compiled by **Moss, Lawson & Co.**, on the prices of Jan. 6, was 5.46%, off .09% from the previous week. The current yield compares with 5.46% one month ago and 4.91% in the corresponding week last year.

Here is the average yield for the individual groups:

	Jan. 6 %	Week Ago %	Month Ago %	Year Ago %
Common	5.05	5.10	4.97	4.41
Pfd. & A	5.34	5.41	5.38	5.04
Mining	6.88	7.14	7.12	6.45
Banks	3.93	3.89	3.81	3.14

Waterloo Teaching Investment

Waterloo College, Waterloo, Ont., has announced a 12-lecture evening course on "Wise Investment in Stocks and Bonds."

The course, offered in co-operation with the Investment Dealers Association of Canada, will be given Monday evenings, beginning Jan. 20.

Lecturers will be drawn from the investment industry. Following is the list of speakers and titles:

Jan. 20: Malcolm W. Payne, **Dominion Securities Corp.**, Kitchener, "Background for Investment."

Jan. 27: D. R. Dattels, **Dattels & Co.**, Kitchener, "Bonds and Debentures."

Feb. 3: Mr. Dattels, "Bonds to Buy for Security and Income."

Feb. 10: G. S. Watt, **Gairdner & Co.**, Kitchener, "Common and Preferred Shares."

Feb. 17: J. P. Henderson, **Calvin Bullock Ltd.**, Montreal, "Mutual Funds."

Feb. 24: D. B. Gill, **Nesbitt Thomson & Co.**, Toronto, "How to Understand Financial Statements, I."

March 3: Mr. Gill, same topic.

March 10: R. A. Mitchell, **A. E. Ames & Co.**, Toronto, "Preferred Shares to Buy for Security and Income."

March 17: Mr. Watt, "Common Shares to Buy for Income and Profit."

March 24: T. P. N. Jaffray, Dominion Securities, Toronto, "Investment Management."

April 7: The lecturers will answer questions and sum up the course. Course moderator will be M. L. Lahn, **Waterloo Trust & Savings Co.**, Kitchener.

INDUSTRIAL ENGINEERS

Leaders in Canadian industrial engineering are being invited to meet at **Avro Aircraft Ltd.**, Toronto, to take steps toward formation of a Canadian chapter of the American Institute of Industrial engineers. There are more than 70 chapters of the AIIE in the U. S. Invitations to major Canadian companies and universities are being sent out this month.

Dividend Changes

CANADA FOILS—Common, 15c payable Feb. 15 to holders of record Jan. 31; ex-dividend Jan. 29. Total payable to date in 1958, 15c; total paid to same date in 1957, 10c; total paid in 1957, 40c plus 20c. Recent price: $15.

ANGLO-CANADIAN TELEPHONE — Class A, 30c payable Mar. 1 to holders of record Feb. 10. Total payable to date in 1958, 30c; total paid to same date in 1957, 15c; total paid in 1957, 60c. (Co. intends annual rate to be $1.10 per share). Recent price: $27.

Alaska-Yukon Issue Awaited

MONTREAL (Staff) — An ambitious plan to establish a major petroleum refining and distribution project in the northern B. C. - Yukon - Alaska area is moving closer to reality.

Financing of **Alaska-Yukon Pipelines Ltd.**, comprising 130,000 no par common shares, with warrants, is expected to be made shortly by **H. C. Flood & Co.** (**FP**, Nov. 2.).

Price is expected to be $5.75 per share including 5/20 of a share subscription warrant. Class A. Warrants entitle holders to purchase stock at $5.75 per share to Dec. 1, 1960, $7 per share to 1962, the price increasing $1 per share every two years to $10 per share to Dec. 1, 1968.

Proceeds in part will be used to acquire from **Alaska-Yukon Refiners & Distributors Ltd.**, one 5,000-bl. and three 10,000-bl. storage tanks, pumping facilities, utility buildings, etc., at Haines Junction, and two 10,000-bl. storage tanks and transfer piping at Whitehorse.

These facilities, now operated in the development of marketing in the Yukon by the trucking of products from tidewater at Haines, Alaska, pending construction of a pipeline from Haines to Haines Junction, will be needed as pipeline facilities when the lines are in operation.

A prior offering of the Alaska-Yukon Pipeline issue will be made at $5.25 per share to preferred and common shareholders of Alaska-Yukon Refiners & Distributors Ltd. (except those residing in the U. S.).

President J. T. Sparling says: "While . . . operations have as yet not fully demonstrated the existence of sufficient demand for a refined products pipeline, it is confidently expected over the next several months that an increasingly favorable marketing record will be attained.

"With this achieved, it is believed it will be possible to justify before the Board of Transport Commissioners the issue to the company of a pipeline permit."

CNR Issue Yields 4.20%

MONTREAL (Staff) — An issue of $300 million in 4% 23-year bonds of **Canadian National Railways** was quickly oversubscribed when offered this week by the Bank of Canada.

Price was 97 to yield about 4.20% to maturity. Bonds are dated Feb. 1, 1958, and due Feb. 1, 1981. They are non-callable to maturity.

The issue is guaranteed unconditionally, as to principal and interest, by the government of Canada.

Proceeds will be used by CNR for repayment of interest-bearing capital advances from the government of Canada.

CANADA MALTING CO. had 185,734, 4½% cumulative redeemable preferred shares outstanding as at Dec. 31, 1957.

INDUSTRIAL ACCEPTANCE CORP. has issued 5,080 common shares at $21.60 a share under terms of a personnel stock purchase plan whereby employees may purchase stock at a price equivalent to 90% of the last preceding board lot sale price. As at Jan. 2, 1958, 2,701,002 common shares were outstanding.

An Attractive Convertible Preferred

The A. V. Roe Canada Limited group with its eight member companies and one associated company is among the largest industrial enterprises in Canada.

Products include aircraft and engines, buses and railway cars, and a wide range of iron and steel products.

We offer as principals:
A. V. Roe Canada Limited
5¾% Cumulative Convertible Preferred Shares, $100 Par Value
Price: At the market, to yield about 5.87%

Each Preferred Share is convertible into 5 Common Shares of the Company to September 12, 1961, or thereafter into 4 Common Shares to September 12, 1965.

New Hydro To Hit Records This Year

This year Canada will add more hydro hp. to its power generating capacity than ever before in a single year and will make substantial additions to its thermal power facilities.

In its annual review of hydroelectric progress, the Water Resources Branch of the Department of Northern Affairs and Natural Resources reports that last year 1,501,560 hp. of new hydro capacity was installed, second only to the 1,758,450 hp. added in 1954.

But new developments or additions to existing plants at present under construction are expected to bring about 2.2 million hp. of new capacity in 1958 and more than 4.3 million hp. during the succeeding few years.

Total installed capacity of water-power plants in Canada at the end of 1957 was listed at 19,871,008 hp.

PUBLIC RELATIONS

Expanding Public Relations Division of major advertising agency requires aggressive junior PR executive. Experience in PR preferred, but will consider applicants with sound background in news media. Excellent starting salary. Unique opportunity for man with ideas and energy. Address full resume to Mr. H. J. Murray, F. H. Hayhurst Co. Ltd., 7 King Street East, Toronto.

GROWTH POSITION

Rapidly expanding firm needs talent upon which to build. We want a man 30-36 years old, Canadian, with a University degree and bilinguality in English and French. Must have an office systems background with demonstrated ability to administer a large clerical force.

Effective work in bank transaction recording, magazine subscription recording, or the cashier function of insurance companies would provide qualifying experience.

Negotiations start in the $10,000 range.

BOX 516, THE FINANCIAL POST, TORONTO

Don't Hesitate to Ask

Each year now, we answer literally millions of questions for investors.

Everything from the latest price on some stock, to "What do you think of my present holdings?" or "How should I invest $500, $5,000, or $500,000?"

We do our best to answer all questions, of course, because that's an important part of our business.

We want to make that policy clear because so many people apparently feel diffident about approaching a broker for the first time — actually apologize for fear they might be a bother.

So make no mistake about it, if you have any question about stocks, bonds, or commodities, we'll do our level best to answer it whether you're a customer or not.

You can come into our office, phone, if you like, or simply write. But in any event, don't hesitate to ask.

THE RAMBLER AMERICAN

American Motors' New Car Really 'Breaks the Rules'

By RODNEY TOUCHE

Some of the firmest-rooted ideas of the North American automobile industry are being faced with change.

The rebel: **American Motors,** struggling toward more profitable operations.

At the end of this month the company and its Canadian subsidiary, **American Motors (Canada) Ltd.,** are to begin selling the new Rambler American model.

The car is smaller than any other car built in North America.

Note these points about it:

- **The car is virtually a reintroduction** of a model that was dropped two years ago.

It is a modified and re-styled version of the Nash Rambler, on the market from 1950 to 1955.

- **It goes against the concept** of "planned obsolescence." The company has announced that the style will not be changed from year to year. This is expected to increase resale values.
- **Emphasis is being put on do-it-yourself maintenance,** to save on service costs. A special repair manual goes with the car.

These ideas are not new.

Volkswagen has successfully proved the advantages of styling stability. (A recent statement by Volkswagen executives confirmed that "basic construction and outer shape will remain the same for many years to come.")

Most European car manufacturers supply detailed repair handbooks to allow the owner to do his own maintenance.

But these are new ideas for North American car makers.

The Rambler American aims to be the lowest priced U. S.-built car.

Delivered price of the cheapest model will be $1,789 in the U. S.

In Canada, where the price has yet to be announced, it is likely to be a few dollars less than $2,300.

At present, the lowest-priced North American-built car in Canada is the Scotsman ($2,275), built by **Studebaker-Packard.**

The Rambler American, with a U. S. price of $1,789, will be hard put to it to sell in Canada for less than the Scotsman.

Will American Motors reopen an assembly plant here? "Introduction of the Rambler American has intensified our interest in getting back into production here," Leo Fenn, vice-president, told **FP** this week.

To what extent does the Rambler American differ from the discontinued Nash Rambler?

It has the same engine and the same unit - construction body-frame. Here are differences:

—Engine compression ratio is 8:0 (formerly 7.3:0).

—Over-all height is 57.3 in. (61.3 in.).

—Rear window area is 700 sq. in. (550 sq. in.).

—Brake lining area is 139.4 sq. in. (104 sq. in.).

—Front tread is 1¼ in. wider, rear tread two in. wider.

Newest styling features are the new aluminum grill, a cutaway for the wheels on the side panels and a reduction in chrome stripping. In addition, the car is available with automatic transmission.

Alta. Oil Output At 346,333 b/d

From Our Own Correspondent

CALGARY—Crude oil production in Alberta for January has been set at 346,833 b/d according to the Alberta Oil and Gas Conservation Board.

The provincial January allowable is 45,224 b/d higher than the production rate during December.

The province's three biggest producing fields will handle more than 53% of the allowable with Pembina's output set at 93,930 b/d, Redwater, 46,424 and Leduc Woodbend, 45,084 b/d.

Production rates from other fields are: Fenn - Big Valley, 17,775 b/d; Bonnie Glen, 17,497; Joffre, 12,337; Joarcam, 10,103; Sturgeon Lake South, 8,672; Wizard Lake, 7,736; Acheson, 6,033; Harmattan-Elkton, 5,812; Golden Spike, 5,511; Stettler, 5,112; Turner Valley, 5,000; and Keystone, 4,016.

In the middle of December there were 7,988 wells capable of being operated.

Why They're Moving

Facts and comment on what's going on in the market and rumors behind some of the moves.

By FRANK KAPLAN

Stock trading in 1957, although it offered many opportunities for the alert trader, was a difficult year for the longer-term investor.

A breakdown of individual changes over the year on the Toronto Stock Exchange shows that more than 80% of the more than 1,100 stocks traded finished in the minus column. Some 16% chalked up gains from the end of 1956.

This breakdown includes lower-priced mining and oil stocks but a quick glance at the industrial list shows only a comparative handful of common shares ahead on the year. Preferreds generally were higher in line with a desire for safety of income among investors.

Here are some of the more active common shares which finished in plus ground.

	Latest Price $	End 1957 $	Gain in '57 $	1957 High $	1957 Low $
Building Products	36¾	36½	6	37	29½
Cdn. Celanese	14	14¼	1	16¼	12¾
Dominion Bridge	22⅞	23⅝	4⅛	28½	19⅜
Dominion Stores	53	50	10½	57½	39½
Loblaw B	22⅜	22⅜	4⅞	25¾	16
Moore Corp.	64½	64½	15½	71	49½
Page-Hersey	106½	105	5½	143	91
Power Corp.	54½	56¾	1¾	83½	48½
United Fuel B	49	47⅛	8⅛	70	39
Walkers	75½	74¾	6½	82½	66

* * * *

THE STREET IS TALKING ABOUT—lagging Canadian issues as Wall Street prices advance. Dow-Jones industrials climb almost 4% in a few days while TSE industrials chalk up rise of less than 2% in same period. Major reason for laggard Canadian markets is current hesitation in foreign investment interest in Canada. Foreign investors said waiting for falling Canadian dollar to stabilize again.

Gas again attracts buying interest with **Trans-Canada** in demand. This gas pipeline was listed recently and has climbed from the $20 level over-the-counter to $24⅜. Rumor is that Prime Minister Diefenbaker will announce gas export policy. Utilities building on natural gas also edge ahead. **Union Gas** at $68 is up from $65. **Consumers'** at $29⅜ compares with a recent $28 level. **Quebec Natural** at $23⅞ compares with $19¼.

* * * *

Some attention also focuses on oils. **B-A Oil** president says 1957 earnings were substantially larger than the $1.36 a share reported in 1956. The stock at $35½ is ahead from $33.

Here are changes in other major oils: **Imperial** at $40⅞, compares with $40¼; **McColl** at $50¾, is down from $52; **Canadian Oil** holds at $26. Canadian Oil reports a 10% rise in sales in 1957. **Interprovincial Pipe Line** with a $10-million expansion planned for 1958 flips ahead to $39⅜ from $35½. And **Trans Mountain Oil Pipe Line** climbs to $59¾ from $57.

Some bright news on the corporate front. **Harding Carpets** boosts profits to $1.15 a share in the year ended October 31, 1957 from 55c a share in the previous year. The stock last traded early in December at $6⅝. Range for the year is a high of $7½ and a low of $6.

* * *

OTHER MARKETS—Gas issues also feature over-the-counter. **Trans-Canada** units, reflecting strength in the shares, bump ahead to $135-$137 before settling at around $132-$135, ahead from about $127 at the end of 1957.

Westcoast shares at $25-$25¾ are ahead from $23¾-$24¼. **Northern Ontario** at $9½-$10 is ahead from around $9; **Alberta Gas** at $13¼-$13¾ compares with $12-$12½ and **Quebec Natural Gas** units at $128-$131 climb about $4.

Sun Life shares edge into the trading spotlight with small blocks of this normally dormant issue selling as high as $234, up almost $50 a share from mid-December. No reason for the sudden interest is apparent.

Crown Zellerbach Studies Newfoundland Pulp Mills

Newfoundland Premier Joseph Smallwood's hopes for new pulp and paper mills in his province may have moved a step closer.

Crown Zellerbach Corp., big producer on the west coast of both Canada and the U. S., is soon to begin economic surveys in Newfoundland with a view to building there.

The present plan, worked out in collaboration with the Newfoundland government, envisages the production of 400 tons of newsprint and up to 2,000 tons of wood pulp a day, if it is economically feasible.

Sufficient uncommitted government timberlands in Newfoundland and Labrador are being reserved during the period of exploration.

Studies have been made from time to time before on the possibility of new mills but none had been considered economically feasible as recently as a year or so ago.

Bowater's Newfoundland Pulp & Paper Mills Ltd. is currently raising annual capacity to 340,000 tons of newsprint annually at Corner Brook, Nfld. This means daily capacity will shortly be approximately 1,100 tons.

Anglo-Newfoundland Development Co., with mills at Grand Falls, has an estimated newsprint capacity of about 250,000 tons a year or approximately 800 tons daily.

Here are the main features of Crown Zellerbach's proposal:

The company will decide on building a newsprint mill within two years of the project being confirmed by the Newfoundland Assembly.

A mill producing 200 tons a day will be completed within three more years if company decides a mill is feasible.

The mill will expand to at least 400 tons a day within the following seven years.

Decision on a pulp mill will be made within 12 years of the Assembly's confirmation.

It will be expanded from 500 tons a day to 1,000 tons a day within a subsequent five-year period, to 1,500 tons within the following five years and to 2,000 tons within a third five-year period.

Wood supply for the newsprint and pulp mills will be provided by 99-year renewable leases on government timberlands in southeastern Labrador and in eastern and southeastern Newfoundland.

The leases provide for payment of ground rent and stumpage fees. It is estimated that at maximum capacity the project will call for 1.25 million cords of wood a year.

Aside from timberlands owned or leased by Bowater's and A.N.D., still-available crown lands on the island itself are estimated to be capable of producing 250,000-300,000 cords annually. This means the bulk of wood required for operations at maximum capacity would apparently have to come from Labrador.

Commenting on the future outlook for the pulp and paper industry, Crown Zellerbach President A. B. Layton said: "We believe the growth of demand for paper products will catch up with the industry's capacity over the next several years, and the longer-range prospects for substantially increased North American paper consumption are quite favorable."

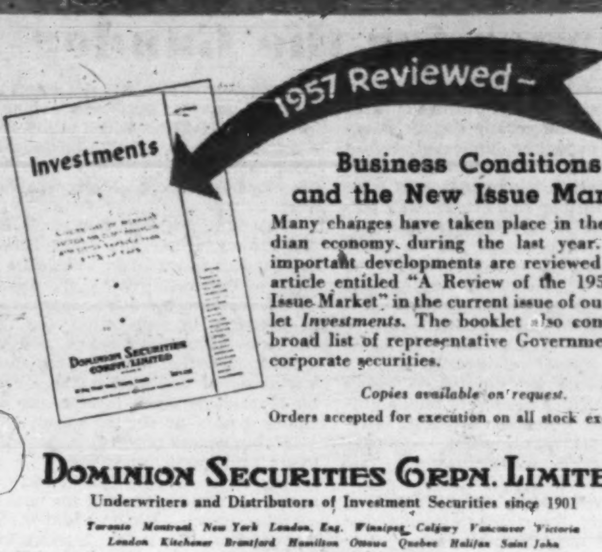
Canso Pulp Mill Decision Soon

MONTREAL (Staff). — Nova Scotia government expects a decision soon on erection of a pulp mill in the Strait of Canso region (**FP**, July 27).

Engineers of a Swedish company—**Stora Kopperberg**—finished a survey of sites some time ago. The plant would be built in co-operation with the provincial government by **Nova Scotia Pulp Ltd.,** a new company.

Government says it looks for a construction start in 1959. Rumored site is near Mulgrave, on the mainland shore of the Strait of Canso.

MUNICIPALITY OF L'ABORD-A-PLOUFFE, Que., school commissioners have sold $113,500 5%, 1958-71 and $36,500 5½%, 1972-77 serial debentures to **Belanger, Inc.** at 98.527 indicating net cost of 5.3828%. Redeemable after Nov. 1, 1967.



Business Conditions and the New Issue Market

Many changes have taken place in the Canadian economy during the last year. These important developments are reviewed in the article entitled "A Review of the 1957 New Issue Market" in the current issue of our booklet *Investments*. The booklet also contains a broad list of representative Government and corporate securities.

Copies available on request.

Orders accepted for execution on all stock exchanges.

Textile Veteran Heads First Independent 'Advice' Agency

MONTREAL (Staff) — The first independent consulting agency on textile merchandising, styling, marketing and manufacturing has been established in Canada.

Headed by Harold S. Leybourne, a 30-year-old veteran of the Canadian textile industry, **H. S. Leybourne & Associates** was formed to assist Canadian mills with the many problems associated with making and selling fabric in the small, highly competitive Canadian market.

The agency's office is in Toronto.

In addition to the consulting agency, Leybourne will also act as commission agent or wholesaler for Canadian and foreign primary textile producers, having acquired **Majestic Woollens Ltd.,** an established wholesale house.

In order to found the new enterprise, Leybourne recently resigned as president of **Artex Woollens Ltd.** and vice-president of **Textile Sales Ltd.**

The agency will be available to advise producers on constantly changing needs of the Canadian market and help them have proper fabrics in the right place at the right time.

As a regular service a complete analysis of the Canadian market will be offered.

Leybourne started his career in the textile industry with **R. Forbes Co.** (the predecessor of **Dominion Woollens and Worsteds Ltd.**) working with the company both in Toronto and Montreal prior to World War II.

During the war he served as a "dollar-a-year" man with Wartime Prices and Trade Board and from 1941 was deputy wool administrator.

In 1946 Leybourne returned to Dominion Woollens as assistant general manager. He later became president of **Consolidated Piece Dyers Ltd.** from which he helped to develop the **Brantford Dyers Association of Canada Ltd.**

ANNOUNCEMENT

GORDON P. OSLER

Mr. Gordon P. Osler was elected President of Security Freehold Petroleums Limited at a meeting of that Company's Directors held recently in Winnipeg. Mr. Osler is President of Osler, Hammond & Nanton Limited, who are the General Managers of the Company. He is also a director of The Toronto-Dominion Bank, The Toronto General Trusts Corporation, Trans-Canada Pipe Lines Limited, as well as several other leading Canadian corporations.

NEW ISSUE

CANADIAN NATIONAL RAILWAYS

$300,000,000
Canadian National Railway
Company 4% Bonds

Guaranteed unconditionally by the Government of Canada as to both principal and interest

The Bank of Canada is authorized by The Minister of Finance to receive on behalf of the Canadian National Railway Company cash subscriptions for

TWENTY-THREE YEAR 4% BONDS

DATED FEBRUARY 1, 1958, DUE FEBRUARY 1, 1981

Non-Callable to Maturity
Interest Payable 1st August and 1st February

DENOMINATIONS
$500, $1,000, $5,000, $25,000, and $100,000

Issue Price: 97%
Yielding about 4.20% to maturity

Principal and interest payable in lawful money of Canada. Principal payable at any Agency of Bank of Canada. Interest payable, without charge, at any branch in Canada of any chartered bank. The bonds will be dated February 1, 1958 and will bear interest from that date.

Definitive bonds will be available on or about February 3, 1958 in two forms: bearer form with coupons attached (this form may be registered as to principal) and fully registered form with interest payable by cheque. Bonds of both forms will be in the above denominations and will be fully interchangeable as to denomination and/or form (without charge and subject to the Company's transfer requirements where applicable). The Bank of Canada will act as registrar of this issue and transfers and exchanges may be effected through any of the Agencies of Bank of Canada.

Subscriptions may be made to Bank of Canada, Ottawa, through any investment dealer eligible to act as a primary distributor or through any bank in Canada. An official prospectus may be obtained from any Agency of Bank of Canada.

These Bonds will be a direct obligation of the Canadian National Railway Company, the Capital Stock of which is owned by Canada, and under authority of the Parliament of Canada payment of the principal of these Bonds and of the interest thereon will be guaranteed unconditionally by the Government of Canada.

The cash proceeds will be applied by the Canadian National Railway Company to the repayment of interest-bearing capital advances from the Government of Canada.

Subscriptions will be received subject to allotment or rejection in whole or in part. The books of the Loan will open on January 9, 1958, at Bank of Canada, Ottawa, and may be closed at any time without notice.

OTTAWA, JANUARY 7, 1958.

Sauce for the Gander

The chief argument advanced by socialists in favor of public ownership of utilities is based on the fact that utilities usually supply essential services which cannot be duplicated at short notice; the argument is that the community must be protected against interruption of those services by irresponsible and extortionate policies on the part of private organizations.

Few North Americans accept the view that public bodies are always more responsible and less grasping than private firms; for that and other reasons there is not general acceptance of public ownership as an end in itself. But there is general acceptance of the view that public utilities are in a special relationship to their customers, and should be required to assure continuous service. The existence of public utility boards and other watchdogs of public interest testifies to the general feeling — among businessmen as well as other citizens — that someone should be in a position to see fair play. Business firms supplying utilities have accepted with good grace the principle that the public interest must be protected.

There is no sign that labor leaders are willing to accept the obvious corollary: that essential public service must not be interrupted by irresponsible and extortionate policies on the part of unions. The subway strike in New York, the rail strikes in Canada, and other threats to the continuation of services essential to the survival of the economy—these demonstrate the degree to which the jobs and incomes of millions of people can be affected by the actions of a handful of unions. If these strikes were always over questions of working conditions and wages, there might be some feeling that astute management should be able to use the ordinary processes of labor relations to maintain service; but there are now so many inter-union rivalries that a utility strike may be a result of a political situation within the labor movement, and have nothing to do with whether the employees are or are not getting a square deal.

This is a situation that the economy quite literally cannot tolerate. Unless labor itself finds some means to establish, among its members, a sense of responsibility for the provision of essential services, the public interest will have to be protected in some other way. The obvious way is by government action; and labor leaders should reflect that once governments move into a situation of this nature, the result is usually far more government interference with private affairs than is strictly necessary.

If businessmen were to push the parallel to its full length, they would be arguing not simply for strict government control of unions in the public services, but for "nationalization" of those unions—for government operation of the unions in the public interest. No businessman is so foolish as to want anything of the sort. To concentrate control of the trade union movement in the hands of the government would be just as dangerous as concentrating control of the means of production in the hands of the government; we are all better off if business, labor and government pursue their separate ends.

However, if interruptions to essential service by labor action become too frequent, something foolish may be done. From everyone's point of view—but especially from labor's point of view—it is urgently necessary to face up to and try solving this problem now.

Why Sales are Buoyant

Here's one potent reason why retail sales continue buoyant in Canada, why almost all of the new year business forecasts were firmly confident:

Said a Dominion Bureau of Statistics daily bulletin last week: "Paid workers received an estimated $1,342 millions in the form of wages, salaries and supplementary labor income in October, some 5.4% greater than 1956's October total of $1,273 million. January-October labor income was up 8.3% to $12,751 million from last year's corresponding total of $11,771 million. All industry groups reported increases from a year earlier in both periods except agriculture, forestry, fishing, trapping and mining (which were down) in the month."

At one time any falling off in the market for our few basic industries could soon threaten the whole economy and send all buying into a tail spin. There's little chance of that in the widely diversified and industrialized Canada of 1958.

New Caribbean State

Federation of the British West Indies, which came into effect this month, was a great stride forward but the three million people of the islands have their job of nation-building still to do. They will need Canada's sympathetic interest and practical help.

To begin with, they must create a central government from scratch. No federal institutions now exist. Political talent and experience are not lacking; leaders like Norman Manley, Sir Grantley Adams and Hugh Wooding would shine in any parliament. The problem will be how to man an effective federal administration without denuding the local regimes.

The federation starts life with some obvious handicaps. Its island members are widely scattered over the Caribbean Sea. More than 1,000 miles separate Jamaica from Barbados. There has been little development of inter-island trade and travel.

What might seem to be an almost fatal flaw in the new federal structure is the fact that internal movement of both goods and people is to some extent restricted. Each island has its own tariff. Migration from the more crowded to the less crowded is not quite free. Clearly, if the union is to thrive, one of the first acts of the new government must be to remove all internal barriers.

In the decade 1946-56 the islands received about $100 million in aid plus loans of about $70 million from Britain. This indispensable help is to continue. The objective of the federation, of course, is economic independence and the full political sovereignty of a member of the Commonwealth. For the present, Britain retains a measure of control over BWI foreign policy and defense.

Federation is a great political adventure for the islands. It can succeed if they diversify their economy, perhaps by the discovery of new sources of wealth like Jamaica's bauxite and Trinidad's oil, cultivate their tourist industry, expand their overseas trade, re-settle their vacant or nearly vacant islands and improve their standards of education, health and welfare.

In these various enterprises Canada can be, and should be, helpful as friend, investor and customer.

Soaring Appetite

Having been caught short just after the last war, hydro-electric power producers have been taking no chances since. Every year has seen substantial amounts added to Canada's producing capacity and there is no letup in sight.

In 1957 output was boosted by 1.5 million horsepower to a total of almost 20 millions. Only in 1954 when 1.75 million hp was added, has that annual increase ever been exceeded. And producers are still building.

In sight for 1958, is a record addition of 2.2 million hp. which will bring developed capacity up to 28% of Canada's total estimated hydro electric power resources.

If there is any slowing down coming in the country's demand for power, producers don't seem to be aware of it.

Can't Rewrite The Past

There is surely a note of hilarity in the news of an assignment that has come to Arthur Hailey, the Canadian dramatist. Mr. Hailey is one of nine script-writers engaged to write TV plays which will "restore the prestige" of American science and scientists. We congratulate Mr. Hailey but will await his prestige-resuscitating thriller with scepticism.

Prestige is an evanescent thing but there is no mystery about the way to gain or regain it. A losing hockey team does this by winning a game. A losing politican does it by winning an election. Scientists, presumably, perform the trick by discovering or inventing something. No quantity of TV drama, by Mr. Hailey or even by William Shakespeare, can be a substitute for performance.

It was sputnik, of course, that brought about the supposed loss of prestige by American science. There was every reason to applaud sputnik as a tremendous Russian feat; but there was really no reason for the gloom and the anguish it caused on this continent. If American technologists were more interested in fin-tailed motor cars than in artificial moons, as they were, it was obviously to be expected that non-Americans would be first in space flight.

Scientific and technical men of this continent have no need to be ashamed of their achievements. But it is a matter of record that they have excelled in adapting other people's scientific discoveries to man's comforts, not in "pure" science nor in brilliant innovation. Radar, jet propulsion, nuclear fission, television, not to mention the motor car, the movies, wireless and electric light — all these ideas were hatched outside America before American adapters got to work on them.

TV is wonderful; but it can't rewrite the past.

It's An Ill Wind

The Asian flu virus may have cut production, bedevilled personnel records, and made many Canadians thoroughly miserable, but one group of Canadians ought to have a sneaking regard for the microscopic monster.

The flu scare is probably at least partly responsible for the fact that drug wholesalers managed to score an 18% increase in sales in October, 1957, over the previous October—at a time when total wholesale sales were down 5.3%.

This high fall volume helped boost wholesale sales of drugs and drug sundries in the first ten months of 1957 to a level more than 6% above 1956.

There are other reasons for the brisk wholesale drug business, but it's certain that the flu scare sent many a healthy Canadian scurrying to the drug store for thermometers and aspirin, to have on hand "just in case." Other, less fortunate Canadians found themselves lying in bed, sipping "miracle"— and very expensive — drugs and surrounded by cold tissues and throat lozenges . . . all of them contributing their bit to that 18% rise in volume for Canada's drug wholesalers last October.

Leveling Down

In Britain last year, an official report says, only 500 people had an income of £6,000 after payment of tax. This is about $16,000 at the currency rate.

In Canada, with one third of Britain's population, there were at least 12,000 people left with $16,000 after they had satisfied the income tax collector. This is an inference, erring on the cautious side, from available statistics.

It's true that £1 will buy more of some things in Britain than $2.70 will buy in Canada. It may also be true that British businessmen are able, on the average, to charge more expenses against income than their opposite numbers here.

Even so, the comparison shows how far the leveling-down process has gone in Britain, even under Conservative rule. That there has been serious damage to incentive is beyond any question.

Facts and Fancies

The pessimist has been well described as the person who only sees the hole in the doughnut. That seems to be the way these gloomsters look or rather half look at business statistics, too.

In recent weeks they have been trying to chill all foolish enough to listen with the rawest of raw statistics on business failures. They cite the total number of failures and make shuddering comparisons with the dark days of 1932. They completely ignore the fact that a lot more people and a lot of business firms have been added to Canada in the last 25 years, that totals which might have been grave for 11 million people in 1932 are little more than normal for the almost 17 million people in Canada today.

Business failures in Canada in 1932, reports Dun and Bradstreet, were 161 per 10,000 concerns. Business failures in Canada for 1956, says the same authority, were 53 per 10,000 or less than a third the depth-of-the-depression rate.

As a very wise man once observed: "Figures don't lie but liars figure."

Napier Moore's

Scratch Pad

PRIME MINISTER JOHN DIEFENBAKER and his wife have been in Nassau.

Mr. Diefenbaker came down with the object of getting a few days' rest. He departed looking as if he had benefited from the change.

For it was a change. The Diefenbakers left Prince Albert, Saskatchewan, where they spent Christmas, in a temperature of 30 below zero. Next afternoon they descended from the Department of Transport Viscount into a temperature of 75 above—a change of 105 degrees.

That night they explored the shops on Bay Street, where they were recognized by an astonishing number of people. Next morning, Sunday, they went to the Zion Baptist Church. They were two of six whites in the congregation, the remainder, and the choir and minister, being colored. The Diefenbakers were thrilled by the dignity of the service, the effectiveness of the sermon and the quality of the singing.

The next day, the Prime Minister went deep sea fishing in a boat named "Sea Pal." It was, too. So were the fish. The day was warm and sunny, but they ignored the popular belief that they would rather be caught on a dull day. Of the 13 fish caught the P.M. reeled in seven whoppers.

Very early on New Year's Day, the Diefenbakers went with the Governor and his wife, Sir Raynor and Lady Arthur, to watch from the windows of the Colonial Secretary's office the second of the famous Junkanoo Parades. Later that morning they paid a surprise visit to the Flamingo Parade—a troup of 60 trained flamingoes which obeys commands like an army company and performs with the grace of a corps de ballet.

During his stay, Mr. Diefenbaker, who gets up early, even on a holiday, did considerable dictating to his secretary. But otherwise he did get a rest. He also experienced a particularly un-Bahamian day. On the Thursday, rain pelted down from a leaden sky.

Incidentally, the P.M.'s secretary is Miss Pound. In Vancouver 30 years ago I knew her father very well. I had not seen her since she was a small girl.

Also in Nassau has been the Postmaster General, Hon. William Hamilton, and his wife. Mr. Hamilton hadn't any idea that the Prime Minister was coming. He knows this island well. During the war he was here for two years, with the R.A.F. transport command.

• • •

DURING THE PAST MONTH or two, the foreign correspondents and political columnists of American newspapers have been writing some pretty scathing comments on the failure of their government's foreign policies.

Marquis Childs, for instance, has said that setbacks in Western Europe, the Middle East and Asia have been so serious that they may become irretrievable. The United Press reported that "confusion, frustration and anger were the elements of the American mood on New Year's Day; that President Eisenhower's loss of popularity is "stunning." A national television symposium recorded that the Russian Sputniks, the Little Rock, Arkansas, racial storm, and Secretary of State John Foster Dulles were regarded as the "three great American blunders of 1957." And so forth.

I have just had a talk with a retired American industrialist who is a millionaire. He was pretty mad about such reports. He said, "We may have made mistakes, but we're still the strongest nation in the world. There are more millions who would rather have the American way of life than the Russian way of life. And to protect that way of life we've got a technological experience that can outpace that of Russia if we set our minds to it."

I asked him what he thought would be the best method of mind-setting.

He said, "The best way would be for our government to take over a couple of our biggest automobile firms, General Motors, for instance, and say 'Forget about manufacturing cars. Put all your technical and production skill into the making of rocket missiles better than the Russians have made—and do it fast.'"

I asked him if this wouldn't be a totalitarian approach not in accordance with the American way of life in peacetime.

He swallowed hard over this and said, "Hell, it isn't exactly peace time. We're in trouble."

I said that was what the correspondents were saying and that he was mad at them for saying it.

He shrugged this off. But he didn't seem very happy.

• • •

A FRIEND OF MINE in Paris sends me an announcement of the opening of a beauty parlor for men. It offers not only softening creams for hard skins, but beauty masks which allow the face to relax after a wearying day at the office.

Mud packs aren't mentioned, but in English-speaking countries "Here's mud in your eye" has long been the prelude to male relaxation.

Stop Me, If—

"We've been married a year and never had a quarrel. If a difference of opinion arises and I'm right, my husband gives in."

"And if your husband is right?"

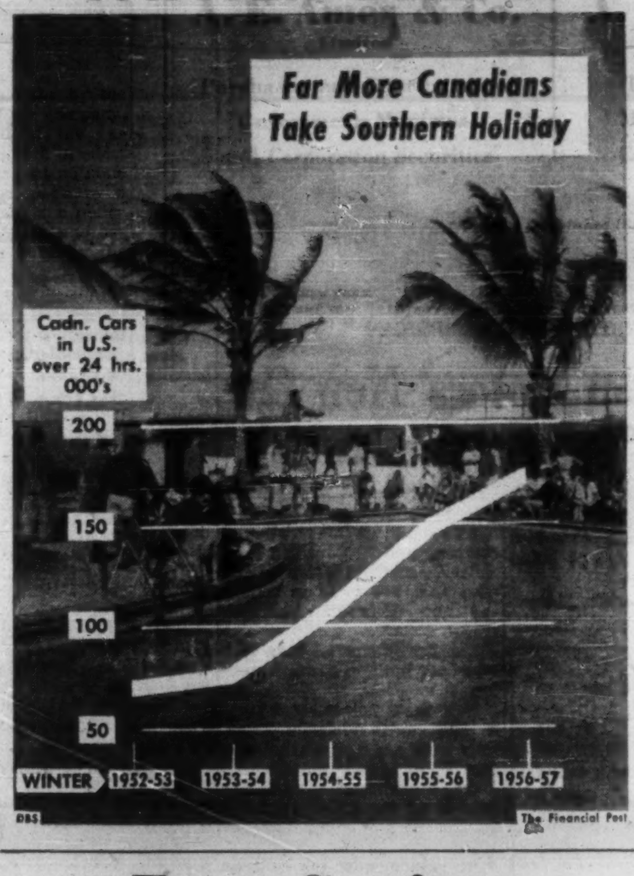
"That has never occurred yet."

• • •

"I have always had a presentiment," she said, "that I should die young."

"Well, darling," remarked her dearest friend, "you didn't after all, did you?"

WINTER BREAK



Post Scripts

Key Man at Brussels

Just a little more than 10 years ago, Belgian officials asked Canada to make Leland Herbert Ausman this country's first trade commissioner at Leopoldville in the Congo. This month, several promotions later, Ausman moves up to the senior post of commercial counsellor in Brussels itself.

MR. AUSMAN

His taking over comes at an important time in Canada-Belgium social, if not trade relations. A few months from now, the Brussels World's Fair & International Exhibition will open for six months, show visitors how Canada lives and works.

To Lee Ausman, the new job should come easily. He has a solid background in the federal trade service, speaks French and Flemish, the two Belgian official languages. He was in charge of Canadian participation in a previous Brussels exhibition in 1938.

He was born in Toronto in 1907 and had decided before he left high school that he would enter the federal Trade Commissioner Service. By 1929, he had his B.Comm. degree, and a wisely chosen assortment of summertime experience in industry (stockbroking, shoe selling, clerking) and government (taxation, education). The next four years he spent with Canadian General Electric, in accounting and methods sections.

His federal career began in 1934 at Ottawa, took shape first with a posting to Bristol, England, as an assistant trade commissioner. While in Great Britain he also served in London and Glasgow, served as a night firewatcher in the metropolis during the early stages of the war, and frequently squeezed in a morale-building stint evenings as a member of the keep-your-mind-off-the-war Speakers' Panel of the British Ministry of Information.

In 1942 he was transferred to New York, and within three years had moved up to trade commissioner and vice-consul.

After the 1946-1950 Leopoldville tour, came a two-year post in Germany, at Frankfurt-on-Main and, later, Bonn.

Promotion to assistant director of the Trade Commissioner Service followed his 1952 return to Ottawa and, another two years later, promotion to Information Branch director.

Earlier this year he was picked to become the Service's world-traveling inspector, take a load off the shoulders of John H. English.

He married the former Margaret Amelia Gregory in England. They have a son, John, 12.

To his spare-time recreation, indiscriminate reading, he hopes some day to add holiday travel.

• • •

Seaway Head

After a 41-year career in federal high finance and big shipping, Bennett John Roberts has traded the chairmanship of the National Harbours Board (assets: $262 million) for the presidency of the St. Lawrence Seaway Authority (cost to Canada: about $300 million).

At 65, the idea of starting a new career comes as a surprise — but only until he is reminded of his personal philosophy: Never turn down extra work. Where he got this habit is not clear; it probably came naturally.

He was born in one of Newfoundland's small towns, Twillingate, and after his parents died went to Toronto as a boy to live with relatives.

After high school, unconvinced of the value of a university education, he became a reporter for FP to learn about business. He soon changed his mind, went on to the University of Toronto for a political science degree (1916), but continued writing.

Turned down in 1917 for war service on medical grounds, he became assistant secretary on the War Committee of the Ontario government's cabinet.

A few months later, hearing that federal Finance Minister Sir Thomas White was looking for staff, he applied, was appointed private secretary after only weeks of departmental experience.

He rose steadily through the finance department to secretary to comptroller to assistant deputy minister. In 1936 he was appointed to the new, three-man National Harbours Board which operates eight Canadian cities' port facilities.

Over the years, he has taken on a host of extra jobs: secretary of a 1920 customs tariff inquiry, financial advisor to the 1931 Royal Commission on Railways and Transportation, secretary to the 1933 Royal Commission on Banking and Currency.

He is married to the former Edith Ellis of Ottawa. He has three daughters and two grandchildren. His two sons were killed in the last war.

Recreations are golf "which is not improving" and membership in the exclusive senior civil servants' Five Lakes Fishing Club "which engages in activities other than fishing."

• • •

National Harbours Chief

New chairman of the National Harbours Board next month will be Maurice Archer, 47, a French-speaking (but bilingual) civil engineer originally from Quebec City.

He moves up from the position of vice-chairman which he has held since his entry into the federal civil service in 1952.

His promotion comes at an important time for NHB. Current capital expenditures in its 10 ports are running at a better-than $25 million-a-year clip. (NHB runs facilities for shipping at Halifax, Saint John, Chicoutimi, Quebec City, Three Rivers, Montreal, Churchill and Vancouver, operates grain elevators at Port Colborne on Lake Erie and Prescott in the St. Lawrence River between Kingston and Montreal.)

With him he brings private enterprise experience in building and an incisive mind developed partly by army training in peacetime and war. (His supplementary reserve status: brigadier.)

After early education at Commercial Academy in Quebec City, Archer attended the Royal Military College in Kingston, graduated in 1932. Next year, he earned his engineering degree at McGill, then became associated with Quebec City engineering consultant Zachee Langlais. In 1937, he and another young engineer, Leo Dufresne, set up their own partnership.

In 1940, newly enlisted Capt. Archer got his top secret movement-orders: board the Quebec-Levis ferry (a ferry ticket was included) and travel another few hundred yards to the Lauzon training camp. At war's end, he had served with artillery in Europe, risen to command the 4th Medium Regiment, RCA, with the rank of colonel.

Maurice Archer is a member of the Engineering Institute of Canada, the Corporation of Professional Engineers of the Province of Quebec and a past president of the Royal Canadian Artillery Association. He has also been a supporter over the years of the Red Cross, chairing and vice-chairing two of its Quebec City financial campaigns.

He is married to the former Cecile Giroux of Quebec City. They have three boys and two girls.

His golf handicap is still a respectable 16 but his skiing, he admits, sadly, on the Gatineau hills within sight of his Parliament hill office, is of the kind seen on Pee Wee Slope at the Ottawa Ski Club's Camp Fortune. Other recreation consists mostly of reading military history and biography.

What Others Are Saying

Editorial of the Week

The World Needs Both

Montreal Gazette

The real danger is that scientists and humanists, under the pressures of the future, may become more than ever set against each other. This would only intensify the false pride of the scientist in his ignorance of the humanities, and the false pride of the humanist in his disinterest in science. Yet the future does not lie in any triumph of the one over the other, but in their understanding unity in what is, after all, a single and desperately urgent cause.

Only the sciences can provide the means for survival; only the liberal arts can reveal what purpose survival has. Surely, then, the two should become the closest allies in the greatest struggle the world has ever known.

Other People's Views

THIS TALK of being back to the 1930s in unemployment is pure nonsense, asserts the **Ottawa Journal.** "In June, 1933—not November or December or January or February, but June—more than 19% of our labor force was unemployed. Now, in October and November, about 5% are unemployed —5% of a vastly bigger labor force."

THE FREIGHT RATES business requires a fresh assessment by the Federal Government, thinks the **Halifax Chronicle-Herald.** "It must decide soon whether the railway system is to continue as just another business enterprise, meeting competition whenever and wherever it arises, or a truly national service supported equitably by all Canadians."

THE BRITISH SYSTEM of old age pensions is better than ours, argues the **Victoria Times,** because increased benefits are matched by higher contributions. "In Canada the whole process of contribution to pensions and other assistance is lost in the income tax structure. This is particularly true where payroll deductions help to mask the proportion of tax that goes to pay for social security."

INCREASED PENSIONS to retired civil servants could set a dangerous precedent, warns the **Winnipeg Free Press.** "No one wants to stand in the way of retired civil servants getting the extra money that many of them need in order to make ends meet. But they should not be made a favored class. And therefore, before the Government embarks on such a program, it would be well advised to take a considered look at what it would be getting into."

THE AGREEMENT between Canada and West Germany for the exchange of nuclear information, equipment and materials is approved by the **Ottawa Citizen.** "In the long run, peace will have to be based on trust between nations. The international confidence a series of agreements of this kind can inspire will undoubtedly prove a force for peace, equally with the material benefits they will bring. For this reason, agreements on the exchange of atomic energy information and equipment should be extended to as many nations as possible."

THE NEW GOVERNMENT began manufacturing trouble for itself during the election campaign, declares the **Ottawa Citizen,** "when it led farmers to expect that they would be practically guaranteed a living whether they were efficient producers or not. These promises, whether implied or spelled out, have now come back to haunt the Diefenbaker regime. In its efforts to reassure farmers, the government has changed its original (prices support) bill, if anything, for the worse. The bill is even less flexible than before and could, under certain circumstances, involve the treasury in large payments to a few groups of producers even when the need was not desperate."

Exchange Protects the Investor

At a Special Meeting This Week TSE Laid Down the Law

Ordinarily, the members of the Toronto Stock Exchange hold a general meeting once a year.

This week, the TSE's board of governors called members together for a special meeting to report on some major developments.

Two main items on the agenda:

(1) A brief report on the investigation into the affairs of Aconic Mining, a stock suspended from trading on the TSE in September;

(2) Announcement of a new procedure designed to "require full, true and plain disclosure and prevent the so-called mis-application of funds of company treasuries." (It's understood the Montreal and Canadian Stock Exchanges will follow the same procedure in future.)

TSE Chairman G. K. Strathy also reported on progress to date on the proposed new exchange building and the centralized facilities planned for electronic accounting and communications, for prompt service to investors. Probable completion: Not before 1960 or 1961.

Because of the importance to investors of the action being taken by TSE to protect their interests, FP presents here a digest of the report by Chairman Strathy and TSE President Arthur Trebilcock.

Mr. Strathy's Statement:

Last year was the most critical period in the history of the Toronto Stock Exchange for a number of years.

The development of the tight money situation and the severe decline in commodity prices, coupled with the moderate recession in general business and increasing unemployment, brought about an almost steady downturn in security prices and a considerable decline in the volume of trading.

As is so often the case when a bear market exists, we also ran into certain most unfortunate instances which have reflected on the reputation of the exchange and all its members, and it is to discuss these problems and the remedies adopted that the special meeting was called.

The exchange has received a good deal of criticism because it did not make a detailed report on the result of the Aconic investigation.

This is natural under the circumstances, but a brief recital of the facts will show clearly that the board had no alternative to the position it took.

Aconic stock took its precipitous decline from $11⅝ to $1 on Aug. 6 and we started a very comprehensive examination of the trading that afternoon.

It soon became apparent that the price break was due, not to a vicious short selling raid as had been alleged by Montreal interests connected with the company, but to forced liquidation of large over-extended margin accounts, and an official statement to that effect was immediately issued in the name of the president of the exchange.

Shortly thereafter evidence of apparent violations of the Criminal Code of Canada was discovered and, as the exchange has not the power to take evidence under oath in an investigation which it is carrying on, or to require outsiders to give evidence or to produce documents, the matter was brought to the attention of the Attorney-General of Ontario.

With his knowledge the matter was discussed with the Toronto police and two detectives were assigned to the case.

Aconic shares were suspended from trading and the massive records which had been accumulated were turned over to the detectives.

The exchange made the services of the exchange auditor available and provided office space in the exchange building in order to assist the authorities in carrying on their investigation.

In view of this development, it was legally impossible for the exchange to make any further statement and it is only now, following the arrest of one of the parties concerned and the announcement recently by the Attorney-General of the appointment of Crown Counsel to handle the case in the criminal courts, that the board has become able to make any report at all on this aspect of the situation.

In view of the fact that the matter is now before the courts, it is, of course, not possible for any more extended statement to be made at this time, but all members will be kept advised to the fullest extent possible as developments occur.

The board of governors has been considerably disturbed, particularly in recent months, concerning certain developments which have taken place in connection with proposals for primary financing through the facilities of the market and for other arrangements by some listed companies.

Hitherto it has not been deemed the function of the exchange to interfere unduly with management.

However, the governing body feels that certain regulations and new procedures are now necessary to rectify the situation which has arisen in this respect.

And in the final analysis, the measure which appears to offer the greatest promise of effecting sound ethical standards for primary financing and other related matters is full, true and plain disclosure.

The board is also perturbed over the fact that in a number of demonstrated incidents, listed companies have recently disposed of very appreciable cash assets for properties or securities of dubious value.

This is, of course, a very unethical, if not necessarily illegal, practice.

These developments have been the subject of conversations between the exchange and the Ontario Securities Commission and as a result of evidence that was discovered, a number of arrests have been made.

As these cases are now pending in the criminal courts, it is, of course, again not possible to give further particulars at this time.

The board has therefore put into effect a new ruling which will require each listed company—except those which are specifically exempted from the provisions of the regulation—to file with the exchange a report in a prescribed form, which will make full, true and plain disclosure, before the company takes any action which will result in a material change in its business or affairs, including the making of any underwriting or option which might involve using the facilities of the exchange for primary distribution.

This report or filing statement will be considered by the board of governors and if it is accepted for filing, the company will be advised that the plan may be carried out, announcement will be made accordingly and a printed filing statement containing all of the particulars will be sent out to members and the press and will be made available to the public.

If it is not accepted for filing, it must not be proceeded with, otherwise the shares of the company will be removed from the list.

In considering the report to determine if it will be accepted for filing, the board, of course, cannot be expected to pass on the merits of the proposed change in the business or affairs of the company, or of every proposed underwriting, option, property purchase or other arrangement therein set out.

Any attempt to do so would be beyond the jurisdiction of the exchange, and shareholders and the public must realize that it is for them to judge the merits on the basis of the full, true and plain disclosure which the company will be required to make.

Even so, this is a very grave responsibility for the exchange to assume, but we believe it must be taken if we are to maintain and enhance the reputation which we have achieved as well as to increase the effectiveness of the important role of the exchange in primary financing.

Mr. Trebilcock's Statement:

The new ruling reads as follows:

Every company whose shares are posted for trading shall give prompt notice to the exchange of each proposed material change in the business or affairs of the company.

The board of governors shall have the right to either accept or not accept the notice for filing and in case of such non-acceptance the proposal shall not be proceeded with, otherwise the shares of the company shall be removed from the trading list.

If the notice is accepted for filing, the board of governors shall give prompt notice thereof to each member of the exchange and may give notice thereof to the press.

Without in any way limiting the generality of the foregoing, the following shall be considered material changes in the business or affairs of a company:

1. A change in the nature of the business of the company.
2. A change in the board of directors or the principal officers of the company.
3. A change, to the knowledge of the company, in the beneficial or registered share ownership of the company which is sufficient to materially affect control.
4. The acquisition or disposition by the company, in one transaction or in a series of similar transactions, of any mining or oil property or interest, or of shares or other securities in another company, at a price in excess of $25,000, payable otherwise than in shares of the company.

The above provisions shall not apply to a company which is exempted from the provisions of this ruling by the board of governors.

The reason for providing that the ruling does not apply to the acquisition of property or securities in another company which will be paid for by the issue of shares of the company, is that Bylaw 62 of the exchange, which has been in effect for years, requires that no issue of shares may be made by a listed company until due notice thereof has been given and has been accepted for filing by the exchange.

It is believed that the procedure with respect to treasury share issues by listed companies has worked very satisfactorily, that it has proved of great value to investors and that it has provided a worthwhile protection to the public who deal in securities.

The enactment of the new ruling will extend this same measure of protection to a very considerable degree, since in future the procedure will apply not only to proposed treasury share issues but also to all other proposed material changes in the business and affairs of a listed company.

In order to provide for full, true and plain disclosure of all material facts with respect to any proposed material changes in the business or affairs of a company, the exchange will require than an application for acceptance of a notice for filing be in a prescribed form, to be called a filing statement, and that this contain all pertinent information which is considered essential.

If a notice is accepted for filing, announcement to that effect will be made in the same manner as has been applied to notices under Bylaw 62 as already mentioned.

In order to provide that full disclosure is made available to the general public, **the exchange will have the filing statement printed by a rapid photographic process and copies thereof will be sent out to members and to the press in the same way as listing statements are distributed, and will be made available to the public without charge at the general office of the exchange.**

The basis for the filing statement is set out in a formula containing 19 points (see accompanying list).

The time element will be of the utmost importance. It will be absolutely essential that no unnecessary delay occur in handling of the prescribed procedure under the ruling.

Notices presented for filing under Bylaw 62 have been handled with a minimum of delay—in many instances they have been received, processed, accepted and publicized within a few hours—and it is hoped that applications under the new ruling may be looked after almost as expeditiously.

Certainly, if there is any delay in securing action by the board, it will be occasioned by failure of the company to provide the essential information in the proper form and not by a lack of prompt action by the exchange.

It is not expected that this new plan of providing full, true and plain disclosure of all material changes in the business and affairs of a listed company will provide a panacea for the ills that have become so apparent in the last year.

That would be too much to expect, human nature being what it is.

It is believed, however, that it will prove of material benefit and it is hoped that it will help to solve the problem which has become of so great importance in the security industry recently.

In any event, it will provide one more measure for the protection of investors and in the interest of the public.

New Filing Statement

To be filed with respect to any material change in a company's affairs, including among other things, an underwriting and option agreement, an issue of shares for property and a proposed reorganization.

1. **Name of company,** head office address and any other office address.
2. **Brief statement of the material change** in the affairs of the company in respect of which this statement is filed.
3. **Names, addresses and chief occupations** for the past five years of officers and directors.
4. **Share capitalization** showing authorized and issued and outstanding capital.
5. **Particulars in respect of any bonds,** debentures, notes, mortgages, charges, liens or hypothecations outstanding or proposed to be issued.
6. **Names, addresses and shareholdings** of five largest shareholders. (If shares are registered in the names of nominees or in street names, give names of beneficial owners, if possible.)
7. **Details of any treasury shares** now the subject of any underwriting, sale or option agreement or of any proposed underwriting, sale or option agreement.
8. **Names and addresses of persons** having more than a 5% interest in underwritten or optioned shares or assignments, present or proposed.
9. **Number of shares held in escrow** or in pool and a brief statement of the terms of escrow or the pooling agreement.
10. **Names and addresses of owners** of more than a 5% interest in escrowed shares and their shareholdings. (If shares are registered in the names of nominees or in street names, give names of beneficial owners, if possible.)
11. **Brief statement of company's chief development** work during past year.
12. **Brief statement of company's future development plans,** including proposed expenditure of proceeds of sale of treasury shares, if any.
13. **If assets include investments** in the shares of other securities of other companies, given an itemized statement thereof.
14. **Brief statement of any lawsuits** pending or in process against company or its properties.
15. **Names and addresses of persons** in a position to elect or cause to be elected a majority of directors.
16. **Any payments in cash or securities** of the company made or to be made to a promoter or finder in connection with a proposed underwriting or property acquisition.
17. **Names and addresses of vendors** of any property or other assets intended to be purchased by the company showing the consideration to be paid.
18. **Names and addresses of persons** who have received or will receive a greater than 5% interest in the shares or other consideration to be received by the vendor. If the vendor is a limited company, the names and addresses of persons having a greater than 5% interest in the vendor company.
19. **Statement of any other material facts.** If none, so state.

The statements must be certified by two principal signing officers who are directors, and by the registered underwriter or optionee.

Statements must be accompanied in appropriate cases (such as a proposed acquisition of mining or oil properties or interests) with the following:

(a) **An engineer's** or geologist's report, which shall contain a summary statement of conclusions, recommendations and estimated cost of proposed program.

(b) **A balance sheet** dated within a period of 90 days, which need not be an audited statement but must be certified by two directors.

(c) **A statement of any material changes** in the items on the balance sheet since the date thereof which must be signed by two directors.

(d) **A statement of source** and application of funds since date of the previous published balance sheet or previous filing statement, whichever is more recent.

This statement will be printed as part of a filing statement at the expense of the applicant company.

Exchange Protects the Investor

At a Special Meeting This Week TSE Laid Down the Law

Ordinarily, the members of the Toronto Stock Exchange hold a general meeting once a year.

This week, the TSE's board of governors called members together for a special meeting to report on some major developments.

Two main items on the agenda:

(1) A brief report on the investigation into the affairs of Aconic Mining, a stock suspended from trading on the TSE in September;

(2) Announcement of a new procedure designed to "require full, true and plain disclosure and prevent the so-called mis-application of funds of company treasuries." (It's understood the Montreal and Canadian Stock Exchanges will follow the same procedure in future.)

TSE Chairman G. K. Strathy also reported on progress to date on the proposed new exchange building and the centralized facilities planned for electronic accounting and communications, for prompt service to investors. Probable completion: Not before 1960 or 1961.

Because of the importance to investors of the action being taken by TSE to protect their interests, FP presents here a digest of the report by Chairman Strathy and TSE President Arthur Trebilcock.

Mr. Strathy's Statement:

Last year was the most critical period in the history of the Toronto Stock Exchange for a number of years.

The development of the tight money situation and the severe decline in commodity prices, coupled with the moderate recession in general business and increasing unemployment, brought about an almost steady downturn in security prices and a considerable decline in the volume of trading.

As is so often the case when a bear market exists, we also ran into certain most unfortunate instances which have reflected on the reputation of the exchange and all its members, and it is to discuss these problems and the remedies adopted that the special meeting was called.

The exchange has received a good deal of criticism because it did not make a detailed report on the result of the Aconic investigation.

This is natural under the circumstances, but a brief recital of the facts will show clearly that the board had no alternative to the position it took.

Aconic stock took its precipitous decline from $11⅜ to $1 on Aug. 6 and we started a very comprehensive examination of the trading that afternoon.

It soon became apparent that the price break was due, not to a vicious short selling raid as had been alleged by Montreal interests connected with the company, but to forced liquidation of large over-extended margin accounts, and an official statement to that effect was immediately issued in the name of the president of the exchange.

Shortly thereafter evidence of apparent violations of the Criminal Code of Canada was discovered and, as the exchange has not the power to take evidence under oath in an investigation which it is carrying on, or to require outsiders to give evidence or to produce documents, the matter was brought to the attention of the Attorney-General of Ontario.

With his knowledge the matter was discussed with the Toronto police and two detectives were assigned to the case.

Aconic shares were suspended from trading and the massive records which had been accumulated were turned over to the detectives.

The exchange made the services of the exchange auditor available and provided office space in the exchange building in order to assist the authorities in carrying on their investigation.

In view of this development, it was legally impossible for the exchange to make any further statement and it is only now, following the arrest of one of the parties concerned and the announcement recently by the Attorney-General of the appointment of Crown Counsel to handle the case in the criminal courts, that the board has become able to make any report at all on this aspect of the situation.

In view of the fact that the matter is now before the courts, it is, of course, not possible for any more extended statement to be made at this time, but all members will be kept advised to the fullest extent possible as developments occur.

The board of governors has been considerably disturbed, particularly in recent months, concerning certain developments which have taken place in connection with proposals for primary financing through the facilities of the market and for other arrangements by some listed companies.

Hitherto it has not been deemed the function of the exchange to interfere unduly with management.

However, the governing body feels that certain regulations and new procedures are now necessary to rectify the situation which has arisen in this respect.

And in the final analysis, the measure which appears to offer the greatest promise of effecting sound ethical standards for primary financing and other related matters is full, true and plain disclosure.

The board is also perturbed over the fact that in a number of demonstrated incidents, listed companies have recently disposed of very appreciable cash assets for properties or securities of dubious value.

This is, of course, a very unethical, if not necessarily illegal, practice.

These developments have been the subject of conversations between the exchange and the Ontario Securities Commission and as a result of evidence that was discovered, a number of arrests have been made.

As these cases are now pending in the criminal courts, it is, of course, again not possible to give further particulars at this time.

The board has therefore put into effect a new ruling which will require each listed company—except those which are specifically exempted from the provisions of the regulation—to file with the exchange a report in a prescribed form, which will make full, true and plain disclosure, before the company takes any action which will result in a material change in its business or affairs, including the making of any underwriting or option which might involve using the facilities of the exchange for primary distribution.

This report or filing statement will be considered by the board of governors and if it is accepted for filing, the company will be advised that the plan may be carried out, announcement will be made accordingly and a printed filing statement containing all of the particulars will be sent out to members and the press and will be made available to the public.

If it is not accepted for filing, it must not be proceeded with, otherwise the shares of the company will be removed from the list.

In considering the report to determine if it will be accepted for filing, the board, of course, cannot be expected to pass on the merits of the proposed change in the business or affairs of the company, or of every proposed underwriting, option, property purchase or other arrangement therein set out.

Any attempt to do so would be beyond the jurisdiction of the exchange, and shareholders and the public must realize that it is for them to judge the merits on the basis of the full, true and plain disclosure which the company will be required to make.

Even so, this is a very grave responsibility for the exchange to assume, but we believe it must be taken if we are to maintain and enhance the reputation which we have achieved as well as to increase the effectiveness of the important role of the exchange in primary financing.

Mr. Trebilcock's Statement:

The new ruling reads as follows:

> **Every company whose shares are posted for trading shall give prompt notice to the exchange of each proposed material change in the business or affairs of the company.**
>
> The board of governors shall have the right to either accept or not accept the notice for filing and in case of such non-acceptance the proposal shall not be proceeded with, otherwise the shares of the company shall be removed from the trading list.
>
> If the notice is accepted for filing, the board of governors shall give prompt notice thereof to each member of the exchange and may give notice thereof to the press.
>
> Without in any way limiting the generality of the foregoing, the following shall be considered material changes in the business or affairs of a company:
>
> 1. A change in the nature of the business of the company.
> 2. A change in the board of directors or the principal officers of the company.
> 3. A change, to the knowledge of the company, in the beneficial or registered share ownership of the company which is sufficient to materially affect control.
> 4. The acquisition or disposition by the company, in one transaction or in a series of similar transactions, of any mining or oil property or interest, or of shares or other securities in another company, at a price in excess of $25,000, payable otherwise than in shares of the company.
>
> **The above provisions shall not apply to a company which is exempted from the provisions of this ruling by the board of governors.**

The reason for providing that the ruling does not apply to the acquisition of property or securities in another company which will be paid for by the issue of shares of the company, is that Bylaw 62 of the exchange, which has been in effect for years, requires that no issue of shares may be made by a listed company until due notice thereof has been given and has been accepted for filing by the exchange.

It is believed that the procedure with respect to treasury share issues by listed companies has worked very satisfactorily, that it has proved of great value to investors and that it has provided a worthwhile protection to the public who deal in securities.

The enactment of the new ruling will extend this same measure of protection to a very considerable degree, since in future the procedure will apply not only to proposed treasury share issues but also to all other proposed material changes in the business and affairs of a listed company.

In order to provide for full, true and plain disclosure of all material facts with respect to any proposed material changes in the business or affairs of a company, the exchange will require than an application for acceptance of a notice for filing be in a prescribed form, to be called a filing statement, and that this contain all pertinent information which is considered essential.

If a notice is accepted for filing, announcement to that effect will be made in the same manner as has been applied to notices under Bylaw 62 as already mentioned.

In order to provide that full disclosure is made available to the general public, **the exchange will have the filing statement printed by a rapid photographic process and copies thereof will be sent out to members and to the press in the same way as listing statements are distributed, and will be made available to the public without charge at the general office of the exchange.**

The basis for the filing statement is set out in a formula containing 19 points (see accompanying list).

The time element will be of the utmost importance. It will be absolutely essential that no unnecessary delay occur in handling of the prescribed procedure under the ruling.

Notices presented for filing under Bylaw 62 have been handled with a minimum of delay—in many instances they have been received, processed, accepted and publicized within a few hours—and it is hoped that applications under the new ruling may be looked after almost as expeditiously.

Certainly, if there is any delay in securing action by the board, it will be occasioned by failure of the company to provide the essential information in the proper form and not by a lack of prompt action by the exchange.

It is not expected that this new plan of providing full, true and plain disclosure of all material changes in the business and affairs of a listed company will provide a panacea for the ills that have become so apparent in the last year.

That would be too much to expect, human nature being what it is.

It is believed, however, that it will prove of material benefit and it is hoped that it will help to solve the problem which has become of so great importance in the security industry recently.

In any event, it will provide one more measure for the protection of investors and in the interest of the public.

14. **Brief statement of any lawsuits** pending or in process against company or its properties.
15. **Names and addresses of persons** in a position to elect or cause to be elected a majority of directors.
16. **Any payments in cash or securities** of the company made or to be made to a promoter or finder in connection with a proposed underwriting or property acquisition.
17. **Names and addresses of vendors** of any property or other assets intended to be purchased by the company showing the consideration to be paid.
18. **Names and addresses of persons** who have received or will receive a greater than 5% interest in the shares or other consideration to be received by the vendor. If the vendor is a limited company, the names and addresses of persons having a greater than 5% interest in the vendor company.
19. **Statement of any other material facts.** If none, so state.

The statements must be certified by two principal signing officers who are directors, and by the registered underwriter or optionee.

Statements must be accompanied in appropriate cases (such as a proposed acquisition of mining or oil properties or interests) with the following:

(a) **An engineer's** or geologist's report, which shall contain a summary statement of conclusions, recommendations and estimated cost of proposed program.

(b) **A balance sheet** dated within a period of 90 days, which need not be an audited statement but must be certified by two directors.

(c) **A statement of any material changes** in the items on the balance sheet since the date thereof which must be signed by two directors.

(d) **A statement of source** and application of funds since date of the previous published balance sheet or previous filing statement, whichever is more recent.

This statement will be printed as part of a filing statement at the expense of the applicant company.

for your office,
the chair with a flair for tomorrow featuring the modernistic "alert look" that today's business tempo demands.
The Verve Group priced remarkably low, is precision engineered to be posture perfect—perfectly balanced, perfectly restful—yet with the eager lines that give it what we call "the alert look".
Office Specialty's VERVE group
The seats are padded with a thick 3" cushion of airfoam rubber; backs and armrests are also foam rubber padded.
Wall-saver feature prevents wall marking, and pastel colored nylon caps on the tips of the chair base prevent scratching of shoes and baseboards.
The wide span of legs makes it practically impossible to tip the chairs over backwards.
Let us show you these chairs today. We guarantee you'll like their lines, their comfort—and the price!

Vital '58 Labor Clash Looms in Pulp, Paper?

(CONTINUED FROM P. 1)

flags flying after this year. United Paper Makers has taken over from Brotherhood of Paper Makers. There are signs that the old unity will not last long. Both groups are industrial unions and could come into conflict in the future.)

Union heads, **FP** understands, are now taking a long look at the whole industry picture.

East fall there was plenty of talk about stiff new demands. The West Coast strike followed large wage demands.

Today's feeling is that it could be wrong to hit too hard.

Big question now: Can the union brass convince the rank-and-file that demands must be held down until business improves?

A second question: Will the Canadian and Catholic Confederation of Labor follow the trend, or make a play for worker support with a "show of strength" through bigger demands?

It looks like the latter. CCCL indicates it wants at least a 7% increase and a big increase in pay for craftsmen.

Looming behind the labor situation is the probability of continued slow business through the first half of 1958, at least.

These facts explain why the industry will be extremely cool to any union demands which would greatly boost labor costs:

- **Wood pulp output** in 1957 eased to a probable 10.2 million tons from a record of 10.5 million in 1956. An increase in 1958 is regarded as unlikely, a small decrease as possible.
- **Newsprint company** earnings, on average, were down about one third in 1957 from 1956. To justify further expansion — which market researchers say soon will be necessary—and encourage investor financing, the industry will try hard to keep profits from sliding much lower.
- **The big U. S. market** for newsprint appears as though it will be no larger in 1958 than in 1957.
- **No one is looking** for big export increases this year.
- **Last year was the first since 1946** that Canadian newsprint output was less than 100% of rated capacity. With greater capacity in 1958, it's predicted that the output ratio will drop below 90% for full year '58—possibly to around 87%.

This would suggest a production decline of from 6.5 million tons in 1957 to 6.2 million or slightly more in 1958. These figures are from the annual review of Newsprint Association of Canada.

ANNOUNCEMENT

SHELL APPOINTMENT

J. A. ROSS

Whose appointment as Vice-President and Treasurer of Shell Oil Company of Canada, Limited is announced by W. M. V. Ash, President. Mr. Ross succeeds O. B. Roger who has retired after a long and distinguished career with the company. Mr. Ross joined Shell in 1945 as Controller, the position he held immediately prior to his new appointment. A graduate of McGill University with a B.Com. degree, Mr. Ross is a member of the Institute of Chartered Accountants of Ontario and is the Vice-President of the Toronto Control of the Controllers Institute of America.

World Strategy Big Factor As U.K. Eyes Our Oil Sands

By W. L. DACK

U.K. interest in Canada's Athabasca oil sands is reaching the stage of definite project planning.

Two developments — one on government level, the other in private industry — points up the potential of the world's largest undeveloped oil source:

- **A committee has been set up** in the U.K., consisting of a high government official and representatives of the Foreign Office and the Commonwealth Relations Office, to make a long-term study of the Athabasca tar sands in Alberta.
- **Large undisclosed U.K. interests** have been studying the tar sands project for some time.

They are expected to make an announcement on important development plans within the next few months.

The U.K. government's interest lies mainly in the field of world strategy.

It looks to possible rapid development of a major new energy source should it lose the big Middle East oil fields.

Although **British Petroleums** — one of the U.K. giants in the world oil picture—is watching the Athabasca tar sands picture closely, it has not as yet taken out any acreage.

Living Cost Levels May Start Downturn

(CONTINUED FROM P. 1)

have been on the down-grade.

By November 1957 — latest available figures — wholesale prices were 2.4% below the 1957 high point, 1.3% lower than a year before and back to about the level of early 1956.

With this trend in wholesale prices, there seems to be good reason to expect an eventual decline in consumer prices.

But, many economists say, don't look for a big change.

The latest consumer price decreases, they point out, are probably largely due to seasonal factors. Several food prices often drop at this time of year and exert an important downward pressure on the over-all price index.

This did not happen in late 1956 — but lower food prices were the rule in both November and December 1957.

The costs of shelter, household operation and "other" commodities and services all continued their advances.

Only because of substantially lower food costs were these increases completely offset and a decline registered on the over-all index.

In both 1955 and 1956 the consumer price index remained relatively steady over the turn of the year and during the first few months of the succeeding year.

The real price build-up came in the late summer and early fall of 1956 and 1957.

The seasonal trends suggest stable prices or a small decline over the next several months may be the best that can be expected.

In addition to the seasonal influences, still-rising labor costs and narrowing profit margins in many industries will resist downward tendencies in the over-all index.

Thorium Sweetens Uranium Profits?

(CONTINUED FROM P. 1)

Tinto Mining Co. of Canada has moved its "big guns" into the new company. **Algom Uranium Mines, Northspan Uranium Mines** and **Milliken Lake Uranium Mines** are Rio Tinto's key operations.

Together they will process 18,000 tons of ore daily at planned capacity. They are shareholders in Rio Tinto-Dow.

Since roughly one pound of thorium occurs with every two pounds of uranium, these three mines could produce the equivalent of almost 4,000 tons of thorium oxide annually.

This would have a value of some $20 million with thorium oxide believed to be worth about $2.50 a lb.

And this rate of production would be almost 10 times present world production of thorium.

It quickly becomes obvious that Rio Tinto and Dow Chemical aren't attracted to thorium production because of its present limited use.

Authorities also note that although thorium is useful in the generation of atomic power, the market would be small.

But thorium is cheap. Dow Chemical in the U. S., parent of Dow Chemical of Canada, is the world's largest manufacturer of low-cost magnesium.

Put the two minerals into the alloy which Dow has been producing and it means a new industry for Canada. This alloy uses about 2%-6% thorium. (Dow's interest in the Algoma area is logical since they are assured of the world's largest known thorium reserve in one small area.)

Considered Simple

Extraction of thorium from uranium ores is being worked out in pilot plant operations.

It would be taken out of "liquors" in the present uranium-extracting process.

It is likely that a central plant would be built at Elliot Lake area with the thorium-bearing liquors piped in for treatment.

Also offering a major potential for the future are rare earths which occur in Blind River area ore.

These include lanthanum (used in medicine), yttrium and cerium. Metallurgists consider rare earths fascinating but major markets will come only after considerable research and technological development.

Rio Tinto and Dow have each appointed three members to the board of directors of the new company.

Rio Tinto is represented by Robert Winters, Dr. E. B. Gillanders and R. Jeanty. Dow is represented by its president, L. D. Smithers, J. L. Smart and D. H. Doan.

Dr. Gillanders is executive vice-president of Rio Tinto of Canada. Mr. Jeanty is vice-president of the **Pyrites Co.**, of Wilmington, Delaware.

Of the Dow representatives, Mr. Smart is development manager of Dow-Canada and Mr. Doan is manager of the chemicals department and a director of the U. S. parent Dow Chemical Company.

Mr. Winters is president and Dr. J. D. Head is general manager of the new company. Dr. Head has been associated with the executive research department of The Dow Chemical Company.

Montreal Metro Invites Tenders

MONTREAL (Staff)—Montreal Metropolitan Commission has called for tenders on an issue of $6,376,000 serial bonds at a coupon rate not exceeding 5½%. Bonds will be dated Nov. 1, 1957.

The issue will not be redeemable prior to maturity. Bonds will mature annually, 1958 to 1977, in varying amounts. Of the $1,242,000 maturing in 1977, the Commission is authorized to re-issue $1,129,000 for the balance of the term which is to Nov. 1, 1987.

Tenders will be received until 11 a.m. Jan. 22. Purpose of the issue is to reimburse banks for funds borrowed and advanced to various municipalities under Montreal Metro's care.

Manitoba Enforces Bracken Inquiry Recommendations

From Our Own Correspondent

WINNIPEG — The Manitoba Liquor Commission is rigidly enforcing the recommendations about liquor advertising made by the Bracken Inquiry.

It announced that beginning Jan. 1, this year, it would carry out these recommendations to the letter.

In nearly all respects it has being doing this already. The chief year-end change stops Manitoba breweries from sponsoring advertisements on behalf of other organizations or causes.

These ads at their end carried the name of one of the Manitoba breweries which alternated in sponsoring this type of advertising. Contracts of this nature were allowed up to end of 1957 but the commission insisted on their ending Dec. 31.

Gifts of beer or liquor to any person by manufacturers or their agents are also out.

Although the legislation doesn't ban gifts other than liquor the commission has stated it considers gifts or souvenirs from liquor interests an undesirable practice.

For the present it asks they be kept within reasonable bounds both in quantity and value.

In its cut-off of brewery-sponsored advertising the commission says it is only carrying out the liquor legislation the intention of which was to eliminate all forms of advertising which could be construed as encouraging persons to drink alcoholic beverages.

The act, however, permits a manufacturer of liquor to display a notice or announcement in which its name appears, provided it doesn't mention name of the liquor manufactured and does not advocate purchase or consumption of liquor.

Even anything done in this connection must first be approved by the commission.

In interpretation of these provisions the commission in a summary of its regulations, distributed in mid-October, has given notice that licensed premises may not indicate they have alcoholic beverages for sale by advertising or in any other way except by a sign located on the premises.

A brewery may place signs on its property for the purpose of identifying the brewery and retail store and naming brands of beer manufactured or sold. Plans for them, or changes in wording or size, have to be approved by the commission.

15% Price Cut In Chain Saws

Industrial Engineering Ltd., Vancouver, subsidiary of **Outboard Marine Corp. of Canada**, Peterborough, Ont., has made a 15% price cut on its Pioneer power chain saw line.

This cut is one step in Pioneer's production and sales program to price chain saws more competitively in a direct appeal to the non-professional market, says general manager C. E. Pulham.

U.K. Sales Here Growing Total Imports Move Down

By MICHAEL BARKWAY

OTTAWA (Staff)—Even before the Conservative drive for U.K. trade can get going, U.K. sales to Canada are growing.

In November, while the Canadian Trade Mission was touring British factories, U.K. firms managed to top their November, 1956, sales here.

They provided 11% of Canadian imports.

This may not sound a large proportion; but it compares with 8.6% in 1956 and an average of 9.2% for the first 11 months of 1957.

It underlines the fact that throughout 1957 U.K. exports to Canada have kept ahead of the previous year, while total Canadian imports have been declining.

The seasonally adjusted import totals have shown a declining trend ever since February.

For the whole January-November period total imports were down by just over 1%, but the decline was growing steeper month by month.

In November it came to nearly 13%.

The U.S. accounted for more than all this drop.

Over the year U.K., other Commonwealth and other foreign countries were all up a little.

Only the U.S. showed a drop —amounting to more than 3% for 11 months and a whacking 17% for November alone.

Month-by-month figures show that imports from U.S. have fallen behind those of 1956 ever since February, and the margin has been increasing.

Imports from U.K. have just kept ahead every month.

In November the margin was a bare $1 million; $49.4 million against $48.5 million last year.

The drop in imports is not unexpected.

It corresponds to the slowing down of the capital expansion boom, and the reduced spending on new machinery and equipment.

U.S. has long supplied a high proportion of Canada's imported capital goods.

Therefore it got the main benefit from the capital expansions of the last two years; and it is the first to take the rap when Canadian purchases slow down.

The implication of the latest figures is that more normal trade patterns may return with the end of the boom.

Nevertheless a period of considerably lower imports is not the easiest time for the British to make good their new drive on the Canadian market.

Their problems are discussed on p. 15.

Maytag Expands Cdn. Operations

Maytag Co., Winnipeg, is undertaking a reorganization to meet the growing appliance market in Canada.

Company is creating a Toronto branch to serve dealers there and in areas west to Windsor, Ont. Warehouse facilities have already been established in Toronto.

More appliances are now sold in Canada, per capita, than in any other country, it says.

Formerly Maytag served only Western Canada. It is a subsidiary of **Maytag Co.**, Newton, Iowa.

Under the new arrangement, the country will be divided into eastern and western divisions. Winnipeg will become the financial headquarters for the entire country.

BRIDGE TENDERS CALLED

From Our Own Correspondent

FREDERICTON—Tenders for a $2.8-million interprovincial bridge connecting Campbellton and Cross Point, Que., are to be called before the end of January.

Construction of the 800-ft. span, rising 50 feet above the Restigouche River and connecting causeways at the N.B. and Quebec ends, is expected to get under way by April.

The N.B. and Que. governments are each paying $500,000, with the Federal Government financing the balance.

MANUFACTURING SUGGESTIONS

Profits, Growth In Here for You?

Operations ranging from the production of roadside weed control equipment to specially-designed bowling shirts for men and women are covered in the latest list of suggestions for new manufacturing in Canada issued by the Industrial Branch of the Department of Trade and Commerce.

The suggestions have come from various sources to the department from whose office in Ottawa further details can be obtained.

All enquiries should quote the item number.

Here is the list:

Weed Spraying

A weed spraying attachment for road graders — patented Canadian equipment—is claimed proven by tests in several municipalities.

The tank and pump units are made to fit all motor graders, and can be mounted or removed quickly.

The pump utilizes the grader engine power.

Inquiries are invited from manufacturers with suitable distributor and promotional arrangements. — Item No. 943.

Farm Irrigation

A U. S. manufacturer of aluminum fittings for irrigation systems is seeking a licensee to manufacture and distribute his line in Canada.

The patented quick coupler is the outstanding feature of the fittings. A special fertilizer injector has been developed for automatically proportioning and feeding fertilizer or pesticides along with the water to the sprinkler heads.

A complete set of molds is available to a firm with associated farm equipment sales, preferably located in the truck farming belt and near a permanent mold aluminum foundry.—Item No. 944.

Waste Disposal

It is claimed that a Canadian fast-rate digester has been recognized by experts in the U. S. and Japan as a major step forward in tackling city dumps and waste disposal.

The Canadian company now requires capital or amalgamation with a manufacturing company to construct in Canada or the U. S., ar operating commercial plant of proven process and equipment to convert municipal and industrial organic waste into quality organic compost fertilizer.

The high rate digester and process plant requires the manufacture and installation of the patented digester units (weight each, approximately 20 tons of fabricated steel and drives), also grinders, dewatering equipment, conveyors, curing bins, driers, etc.

This process and end product are economical, practical and profitable when capital, engineering and sales are co-ordinated.

Working arrangements can be made with a company prepared to invest in development of full size commercial installation.—Item No. 945.

Wall Plugs

A Swedish firm is offering its patented aluminum wall plug for manufacture under license in a Canadian hardware plant.

The "Alex" shield or plug is made from aluminum sheet in two or three sizes for use with a wide range of standard wood screws.

It is claimed to be cheap and permanent, replacing more costly expansion shields and less durable plugs of other materials. Samples and catalogue sheets available on loan. — Item No. 946.

Bronze Bearings

A U. K. firm with years of experience in producing self-lubricating bronze bearings is now offering to share its production, engineering and sales experience with a Canadian manufacturer with associated lines and sales organization.

Special presses for making these bearings, and for other powdered metallurgical products, have been developed by the U. K. firm as well as a new process which makes possible for the first time, larger components up to 12 in. and 15 in. across in self-lubricating porous bronze.

This development makes possible new solutions to many machine design and lubricating problems. Further information and name of the U. K. firm are available on file.—Item No. 947.

Socket Wrench

This "Alli-gator" adjustable socket replaces the full set of fixed sockets from ⅜ in. to ¾ in. nut size, and is used with the usual ratchet handle.

The special design of clamp jaws gives an effective grip on any form of nut or bolt, within its size range, e.g. square, hexagonal, round, etc.

The device is similar in purpose to the adjustable crescent wrench, in that it is designed to replace a number of fixed wrenches as well as giving perfect adjustability to all intermediate non-standard sizes and shapes.

For further information, write directly to the U. S. developer and patent holder — James Conway, general manager, **Alliance Tool Co.**, Allen Building, 287 E. Sixth Street, Saint Paul 1, Minn. — Item No. 948.

Starches

Starch manufacturers or converters are invited to contact a consulting chemist in Switzerland for information on his products which are presently produced and sold in several European countries under license.

Four of the five products described are used in the textile industry and the other is principally employed in sized paper of all kinds.

The names of the European licensees and a detailed resume on the five products are available on loan. — Item No. 949.

Upholstery Fabrics

Fabrics for furniture of cotton and rayon blend are the specialties of this New York manufacturer interested in arranging production in Canada.

Some of these fabrics have been selling in Canada and it is felt that there is an opportunity for additional business.

Any Canadian textile firms interested in investigating these fabrics, their costs, pricing and sales, will be given the name of the firm on request. — Item No. 950.

Bowling Shirts

A U. S. concern wishes to license a Canadian company for the manufacture and distribution of men's and ladies' bowling shirts.

These are uniquely styled to afford the bowler greatest freedom of action.

The assistance offered by the U. S. firm comprises capital, technical information, technicians on loan, as well as sales and advertising literature. — Item No. 951.

$10 Million Oil Pipeline Expansion

Interprovincial Pipe Line Co. has completed plans for a $10 million expansion program in 1958. Company will construct about 82 miles of 24-in. loop line in Alberta and Saskatchewan.

When the work is completed in fall 1958, Interprovincial will have a double line from Edmonton to Superior, Wisc.

The looping program will consist of four sections each approximately 20 miles long, running eastward from the company's pump stations at Edmonton and Hardisty, Alta., Kerrobert and Loreburn, Sask.

At each of the company's pump stations at Regina and Glenavon, Sask., as well as Cromer and Glenboro, Man., an additional 2,040 hp diesel pumping unit will be installed.

In the wholly-owned U. S. subsidiary, **Lakehead Pipe Line Co.**, a new remote-controlled, electrically - driven pump station, powered by 4,400 hp., will be constructed at Bay City, Mich.

This will be the 20th pump station on the 1,931-mile crude oil pipeline which carries western Canadian crude to eastern markets.

With completion of the new facilities capacity of the Interprovincial - Lakehead pipeline system will be increased to approximately 275,000 b/d out of Edmonton, 379,000 b/d from Cromer, Man., and 261,000 b/d from Superior to the Ontario market.

A Londoner's
Financial Notebook

News and views on the British securities markets, specially written for FP by one of London's distinguished financial writers.

Markets have begun the New Year on a reasonably steady note, although prices have been held in check by the threat of large new capital issues. On the foreign exchanges, sterling has reached its highest level since the spring of 1956.

The new issue market will soon have to contend with the big rights offerings of the **Royal Dutch** and **Shell Oil** combines and there is the prospect of a number of fixed interest issues by public corporations.

In the bond market, the first major issue to be introduced in 1958 is a £10 million loan for the Federation of Rhodesia and Nyasaland. This will bear interest at the now fashionable rate of 6%, and is priced at £96 per £100 of stock. Redemption dates are 1976/79.

News that workers are to be laid off at leading film studios caused a sharp drop in cinema shares. The British cinema industry has been hit by the high rate of entertainments tax and the competition of television. Attendances have fallen heavily over the past four months.

A bright feature in stock markets has been provided by the shares of **Imperial Chemical Industries**. A New Year message said that the company took a reasonably buoyant view of prospects for the chemical industry in 1958, and that the signs pointed to steady progress at home and abroad.

• • •

The **Bristol Aeroplane** and **Hawker Siddeley** groups have announced plans for a jointly - owned subsidiary, through which they hope to develop a new jet airliner for **British European Airways.**

If the plan goes through, Hawker will have a 65% share in the company and Bristol will take the remaining 35%. The new venture will be backed by the resources of both groups, whose combined assets exceed £200 million.

The chairman will be Sir Frank Spriggs, managing director of Hawker Siddeley, and the directors will include Sir Reginald Verdon Smith, chairman of Bristol, and Sir Roy Dobson, chairman of the Canadian side of the Hawker group.

Earlier reports that Hawker and Bristol were planning an all-out merger were described by the companies as conjecture. But as the U. K. government favors rationalization of the aircraft industry, this is a possibility to be borne in mind for the future.

Bristol is already well established in the civil aircraft field through its Britannia airliner, but Hawker has in the past been mainly concerned with military machines. With defense orders running out, it is of great importance to the group that it should secure a satisfactory footing in civil production.

The B.E.A. contract has aroused keen rivalry between Bristol-Hawker on the one hand and **de Havilland**, which has also submitted a design, on the other. The initial value of the B.E.A. order is estimated at between £20 million and £30 million, but if the new plane is successful a vast international market could be created.

• • •

Output from U.K. steel plants in 1958 is likely to exceed the estimated total of 21.7 million tons in 1957, but the industry expects a check in home demand. Deliveries are not, however, expected to fall by more than about 5%.

The British Iron & Steel Federation states that steel capacity this year will rise by 750,000 tons to a total of around 23.5 million tons through new plant coming into use. Although imports are expected to fall and exports to rise, production is almost certain to be below capacity.

Demand from the motor industry is buoyant and trade in consumer goods generally is well maintained, but the government's anti - inflation measures will have an effect this year on steel requirements of the capital goods manufacturers. The Federation thinks it unlikely that there will be any major upturn in the over-all demand for steel at home before the closing months of the year.

Despite its cautious short-term forecast, the Federation sees no reason to modify the current five-year development program for the U. K. steel industry. This will go ahead, provided, of course, that the necessary finance is available.

• • •

Although detailed figures for December will not be available until later this month, it is already clear that 1957 was a record year for British car exports. Home demand, too, is well maintained.

Banks' SIU Orbit All Set For Engineers

MONTREAL (Staff) — The long struggle for control of the small but important National Association of Marine Engineers seems to be ending.

Unless the Appeal Court reverses a judgment given last week in Montreal Superior Court, elements in favor of working closely with waterfront strongman Hal Banks, head of Seafarers' International Union in Canada, will be in complete control.

Last week's court decision upheld an injunction preventing John McGough and John Stirling from using the offices or titles of NAME. McGough over the past 18 months has fought a long but losing campaign to pull the engineers out of the SIU orbit.

His chief opponent throughout has been Richard Greaves. For a time both claimed the other was working to "sell out" to Banks. But recently the battle lines became more distinct, with Greaves and Banks working closely together.

Feeling in shipping - labor circles now is that the battle is over. At mid-week the McGough camp was planning appeal in March, but McGough's enforced absence from the scene since September — when Greaves obtained the injunction—looked to have weakened his control badly.

Meanwhile Greaves has been busy mending fences. This week he was touring the Maritimes.

What will be the outcome of the virtual reunion of the two main shipping labor bodies?

Most likely result will be a considerable strengthening of Banks' hand.

It was a serious blow to his plans and prestige when the engineers on five **Canadian National Steamships** freighters sailed them from Montreal to Halifax to escape winter ice — despite an SIU strike of the vessels.

From now on, observers expect hard work to make NAME into a more active and workable labor unit. The engineer officers have been poor subjects for union organizers in the past, feeling closer to management than labor.

But if fresh organizational efforts succeed — and the competitive troubles of the Canadian merchant fleet may make the officers more anxious for union protection — then Canadian seamen may present their most united front ever in future negotiations with management.

Above is the Canadair CL-28, the world's most formidable search, strike and kill maritime patrol weapon in the air today. The first was christened on September 30, 1957, before thousands of spectators and then formally entered RCAF service.

BIG Things

Are Happening At CANADAIR

It was a proud day — a day full of drama — a day of historic significance . . . for on it, at the Canadair plants in Montreal, the largest aircraft ever built in Canada was officially handed over to the Department of National Defence of Canada and the Royal Canadian Air Force.

The Canadair CL-28's will contribute in decisive measure to Canada's defensive strength for they represent the latest and most up-to-date aircraft for the performance of the maritime reconnaissance role assigned to them.

Their range and endurance, plus the most comprehensive collection of electronic and other detection equipment ever assembled into one aircraft, will provide a new dimension of sea safety for Canada and the other nations of the NATO alliance.

The CL-28's are a very important addition to the already potent weapons with which our Air Force and Navy are equipped. With these aircraft, the two services will make a formidable team. With them, the mid-ocean areas can be reached from Canadian bases and, once there, station can be maintained for an additional eight to ten hours. With them, enemy submarines can be located, tracked, and fixed — whether they be submerged, 'snorting', or on the surface, and once contact is made, the CL-28's have the weapons to make the kill.

And NOW a Giant Turbo-Prop Variant of the CL-28!

Following the CL-28's closely on the production line is Canadair's much larger new turbo-prop military aircraft, the CL-44, the RCAF's newest strategic transport. The CL-44's are intended to fill a vital Canadian defence need in an age where defence mobility is a first necessity.

The CL-44 will be produced in several commercial configurations: as the Canadair Liner in the passenger version, and the Canadair Freighter in the cargo version. The two new aircraft will be established as among the *largest civil turbo-prop liners in the world.*

1946 Girl Babies Sheer Joy to Our Hosiery Firms

MONTREAL (Staff) — The bouncing baby girls of Canada's bumper post-war baby crop — apples of many a parental eye — are also a joy and boon to the nation's hosiery industry.

The reason: The baby girl born in 1946 is now a lass entering her teens and a potential buyer of nylons.

This means:

Starting this year hosiery makers are looking for a big boost in sales volume.

This is welcome news for one of the nation's most hotly competitive industries.

By 1960 or so, officials feel, business should really be booming provided Canadian hosiery mills can improve their position in the domestic market.

In 1957 total Canadian market for women's long nylon hose was just over five million doz. pair, about the same as 1956 — 11 pair per capita.

While consumption of seamless hose shot ahead, full-fashioned sale lagged well below the 1956 level.

Estimated market for full-fashioned hose in 1957 at 3.8 million doz. pair decreased 9.5% from 4.2 million doz. while market for seamless at 1.3 million doz. increased 37% from 976,000 doz. in 1956.

Major Factor

Imports of full-fashioned are negligible. But in the seamless field they are a major factor.

Last year, of the total Canadian market of 1,340,000 doz. pair, Canadian production was 715,000 doz. (53.5%) while imports — chiefly from England — were 625,000 doz. pair (46.5%).

This compares with Canadian production of 540,000 doz. pair in 1956 (55.3%), leaving 436,000 doz. (44.7%) to imports.

During the past year the downward trend of hosiery prices has continued.

In the full-fashioned field, 51-gauge 15-denier hose in plain pack that a year ago sold to the retail trade for $5 to $6 per doz. this Christmas could be bought for from $4.25 to $5.50 doz.

Seamless hose of the 400-needle, 15-denier variety in plain or store pack dropped from $7.75 - $8.50 doz. price range to $6.50 - $8.25.

Prices of nationally branded lines have been relatively stable over the year although volume has been hurt by imports, particularly from England.

Hopes On Color

While prices are extremely competitive, the industry is pinning hopes for an improved position on a heavy promotion of color in nylon hose started last fall.

The promotion — designed to elevate the nylon stocking to a major fashion item — was generally considered to be highly successful by the industry. It will be continued this year.

During the last three or four years Canadian hosiery makers have invested heavily in new equipment both to replace outdated machines and for new equipment required for manufacture of seamless stockings.

Latest modernization program to be announced is by **Gotham Hosiery Co. of Canada Ltd.** (a wholly owned subsidiary of **Chadbourne-Gotham Inc.,** Charlotte, N.C.) which is spending $750,000 on a "technological facelift" at its St. Hyacinthe, Que., plant.

The money will be used to re-equip the plant with the latest British and U. S. knitting, finishing and quality control machinery.

The program — scheduled to be completed by Aug. 1, will substantially lower unit costs and increase plant's productive capacity by 50%.

Baltimore Advertising Tax Opposed

Special Correspondence

WASHINGTON, D.C. — The nearby city of Baltimore has come up with an idea to help pay increasing costs of running a city.

The idea, however, has run into the stiffest opposition any new tax plan has ever had in this area. Baltimore plans to tax advertising placed in newspapers, magazines, television and radio stations, on sign boards and any other medium which carries advertising.

The city figures to earn an extra $2.5 million a year. The taxes run this way: 4% on all advertising matter placed with any media, and another tax of 2% on the gross advertising receipts of the media. The first tax is payable monthly and the second is payable quarterly.

Several other American cities are standing by to watch the outcome of the Baltimore advertising tax plans. If the city carries the tax out successfully, other cities may follow suit.

Fifteen injunction suits are pending on the tax issue. All Baltimore daily and Sunday newspapers, all the television stations, most of the radio stations, the major department stores and other merchants have filed the suits. In general, the suits attack the tax on the ground that the city has exceeded its taxing authority from the state and that the tax is arbitrary, discriminatory and vague. They say also that the tax does not assess competing media coming into the state from outside.

Canadian Dollar Climbs Slightly

Premium on the Canadian dollar strengthened slightly Tuesday after dipping to about ⅞c in terms of the U. S. dollar.

Since reaching a record high of $1.06⅛ U. S. in August, the Canadian dollar has been declining—especially since November, when premium stood at 4c.

This week's reversal of the trend was attributed in part to heavy demand from the U. K., Europe and the U. S. for the new $300 million **Canadian National Railways** 4% bond issue (offered to yield 4.20%).

Dealers also cited the resignation of U. K. Chancellor of the Exchequer Peter Thorneycroft, as weakening sterling in relation to dollars.

Toronto Ad Club Management Course

The Advertising and Sales Club of Toronto and University of Toronto has announced a spring "workshop" in sales management which will take the place of salesmanship courses.

The workshop will consist of 10 sessions Monday evenings at 7:30 beginning Jan. 20.

Five of the 10 sessions will be lectures by outstanding authorities in sales management. Lectures will be followed by discussion after which a case study will be distributed for small-group discussion under leadership the following week.

Workshop director is E. J. Fowler, **IBM.** Enrolment is limited to 40.

TRELCO LIMITED, TORONTO

Manufacturer of paints, varnishes and enamels, founded in 1921, announces that it has become associated with the Jenson & Nicholson Group of London, England. The Jenson & Nicholson business was founded in 1821. It operates two paint manufacturing plants and eighty paint stores throughout the British Isles, as well as paint plants in Australia, South Africa, Portugal, Pakistan, India, and East Africa.

Earlier in the year Jenson & Nicholson announced the acquisition of Conant Paints Limited, Montreal. Long range plans are that eventually Canadian operations will be on a national scale.

Trelco Limited states that there will be no change in management, policy or personnel.

The Officers and Directors of the company are:

B. J. Nicholson, Chairman of the Board; J. W. Mowder, President and General Manager; C. A. Jolly, Vice-President, Production; A. Stewart, Assistant Manager; J. Claxton, Secretary; W. S. Hulton, Director; C. G. Abbey, Director.

By JOHN G. McDONALD

Tax Board Upholds Land Profit "Gains"

Since **No. 476**—the Alberta "shopping centre" case (**FP, Dec. 28**) — the Income Tax Appeal Board has handed down two decisions concerning the capital gain or loss treatment of corporate real property transactions.

In **No. 476** Mr. Fordham held that "it is easier for a camel to go through the eye of a needle than for a limited company . . . successfully to lay claim to having made a capital gain."

Mr. Fordham's reason for taking this stand was that a limited company, having official powers and objects in its Letters Patent of Incorporation relating to the exploitation of land, cannot be heard to deny that **trading** in land is an integral part of its business.

Having reached this point in the reasoning process, it would follow that gain derived from the sale of land should invariably be taxed as income in the hands of such a company.

The two more recent Board decisions make it clear that Mr. Fordham's view was too extreme.

In the case of **Mono Land Ltd. v. Minister of National Revenue,** the late Chairman Monet dealt with a company incorporated for the legal purpose of, "purchasing, leasing, taking in exchange or otherwise acquiring lands — and selling, leasing — or otherwise disposing [of them in whole or in part]." The company was also empowered by its charter to carry on business as contractors and builders, and to erect buildings etc.

In 1953 the company had acquired 71 acres of land for the purpose "of erecting industrial and factory buildings and renting them out." This purpose was carried out by the construction of a factory for lease to what was then **Kaiser Frazer of Canada Ltd.**

The company then experienced difficulty in persuading the local municipality to pave an access road into the property. To overcome municipal reluctance to spend the necessary money for this purpose, the company **sold** two parcels of its land to other industrial firms to whom it would have preferred to lease the property.

Profit derived from these sales was assessed as income subject to tax.

Chairman Monet discharged the assessments on the ground that the sales did not arise in course of the business of trading in land — the sales were not "an adventure in the nature of trade" or part of the taxpayer's business within the meaning of the Income Tax Act.

The rule in this type of case has been laid down by the Supreme Court of Canada. "The question to be decided [in each case] is not what business or trade the company **might** have carried on under its memorandum [or Letters Patent of Incorporation], but rather what was in truth the business it did engage in."

This Loss On Land Was Not Deductible

It follows that a capital loss suffered by a company is not deductible in computing income for tax purposes.

A loss will be of a "capital" nature if **dealing** in the property in question does not **in fact** form part of the company's business.

This is made clear in the recent case of **Lount Construction Co. Ltd. v. Minister of National Revenue,** where a corporate building contractor incurred a "turnover" loss of $50,000 in a real estate transaction in order to secure a contract to build a housing project on the land sold.

The question asked by the courts in these cases is — why did you sell the land?

If you sold it in the course of your ordinary trading operations, your profit is income subject to tax and your loss is deductible in computing taxable income.

But if you sold it as part of your fixed capital assets for a reason unconnected with your current trading operations, your gain is not income and your loss is not deductible in computing income.

Could Be Tax Sin To Pay Your Kin Tax Board Upholds

Canada's personal income tax rates are "progressive." The greater your income, the more tax you pay on a percentage basis.

As you go up the income scale, your "marginal" or "top" rate of tax increases. For example, a $1 raise for a single man earning $5,000 a year is worth only 78c after tax, and if he earns $13,000 the extra dollar nets him only 62c.

Because of this progressive incidence of tax, family heads are usually quite interested in all lawful methods of dividing their income among members of their families.

The most useful methods of splitting family income are the family partnership and the family business in which uncles, aunts, husbands, wives and children are **hired** as employees.

Mr. McDonald is associated with the legal firm McCarthy & McCarthy and is a lecturer in taxation at Osgoode Hall Law School, Toronto.

The Income Tax Act contains special rules designed to set aside for tax purposes any arrangement by which a man's wife is taken into his business as a partner or hired as an employee.

No such "safeguard" exists with reference to other members of the family, and the decided cases make it clear, for example, that father-son partnerships are not impeachable for tax purposes even if the father puts up all the capital of the business.

The son may supply services only, but if the partnership agreement gives him half the firm income, it remains his under the tax law and the Department of National Revenue is not entitled to tax it to his father.

But the rule remains that an expense is deductible in computing taxable income only if it is "incurred for the purpose of gaining or producing income from the business."

It follows from this that salary paid to a member of the proprietor's family is not deductible unless the family employee makes some contribution to the business. The businessman in the family is not allowed to funnel off his income into the hands of his non-working relatives without paying tax on it as his own.

This was made clear in the recent case of **No. 484 v. Minister of National Revenue** in which the taxpayer paid a salary to his mother—aged 75 years—and then claimed the right to deduct the salary in computing his business income.

Mother had performed no work for the firm and her salary was therefore not a deductible business expense.

Why pay a full time salary . . .

for a part time job?

Modern office managers faced with ever increasing overhead are constantly seeking more efficient operating methods. One method, a relative newcomer to the field, is the use of TEMPORARY OFFICE HELP during peak load periods. In this manner office managers have a highly flexible method of controlling salaries. Salaries fluctuate with the amount of work to be done.

Providing office help in all categories of business administration, Office Overload's trained staff can be used by the hour, day, week or month on just as flexible a plan as business demands. 9,000 Canadian businesses have saved money this way because as users of temporary help they only pay for hours actually worked in their office.

For more complete information on how you can reduce fixed overhead, call the nearest branch of Office Overload and have a trained representative call.

Office Overload, Canada's largest temporary office help service bureau has served over 9,000 Canadian businesses with part time help for peak work periods.

ANNOUNCEMENT

NEW APPOINTMENT
TORONTO GENERAL
TRUSTS

F. A. WANSBROUGH

C. C. Calvin, Q.C., President, The Toronto General Trusts Corporation announces the appointment of Frederick A. Wansbrough as an Assistant General Manager at Head Office, Toronto.

A graduate of the University of Toronto, Mr. Wansbrough joined the Corporation in 1930 and has had a wide experience at Head Office and branches. For three years, prior to World War II, he was Manager of Windsor Office and after six years with the Canadian Army overseas was appointed Manager of the Corporation's Office in Winnipeg in 1948.

The Army's in 'Rat Race' As Canadair Seeks Orders

OTTAWA (Staff)—The Canadian infantryman can soon expect to be more mobile.

The army expects to get departmental approval soon to spend about $200,000 for 25 new cross-country tracked vehicles developed in co-operation with **Canadair Ltd.** of Montreal.

The vehicles will:

- **Take weight off the footsoldier's feet** by carrying or pulling much of his heavy equipment.
- **Put diversifying Canadair** into a new line of business — the production of an off-road transport unit expected to have wide sales appeal in all climates and terrains.

Nicknamed the "rat" (for royal articulated tractor), it will move over rough country, swamps, swim rivers and climb steep hills (**FP**, June 1, 1957).

Canadair has already produced six of them which have now been given engineering tests by the army.

The next 25, which could be delivered later this year, are expected by the army to go to infantry units for "user trials" to show how best it can be used and on what scale the army should be equipped with it.

Approval and use by the Canadian Army, Canadair thinks, should spur interest in the military in other countries.

The rat is also aimed at the civilian market. Planned price of about $7,000 would put it within reach of mining companies and other organizations operating where few roads exist.

The 12-ft. long vehicle is in two sections, engine and trailer. Steering is accomplished by angling the two sections through a cable mechanism.

It will carry 600 lb. in the trailer pull another 1,000 lb., travel at up to 23 mph.

It is powered at present by the **Volkswagen** air-cooled auto engine.

Canadair official told **FP** this week there are encouraging signs of upcoming rat sales.

Two demonstration rats are now in Europe. One is operating in Switzerland and West Germany, the second in Norway and Sweden.

Considerable interest has been shown, but dollar shortages are causing troubles.

In addition Canadair has had requests for demonstrations from oil and geophysical companies in the U. S. and abroad.

Another rat is due to be demonstrated in the Rockies as soon as there is enough snow for communications companies.

Most Ottawa Loans To West, Atlantic

Smaller enterprises, particularly in the Atlantic region and in Western Canada, have been receiving a substantially larger number of loans from the government-owned **Industrial Development Bank.**

The IDB approved 391 new loans in all during its fiscal year ended Sept. 30, 1957, 15% more than those agreed to in the previous year.

Almost the whole of the increase was due to more borrowers in the Atlantic and western provinces notes J. E. Coyne, president of the bank.

Number of new loans approved in Ontario and Quebec increased only slightly in 1957. With the greater number of approvals in other provinces, this meant Ontario and Quebec accounted for only 56% of total national approvals as against 62% a year earlier.

Loans of $200,000 or less increased from 307 to 361 while the number in excess of $200,000 eased from 33 to 30.

Average size of new loans in the latest fiscal year was $62,000.

The bank was established just before the end of World War II to provide capital assistance to industry, with particular consideration to the financing problems of small enterprises.

Loans and investments outstanding on the books of the bank at the close of the latest fiscal year amounted to $71.9 million, 37.5% higher than a year earlier.

Accounts Rise

At Sep. 30 the bank was carrying 1,028 accounts, up sharply from the 821 carried a year before.

Disbursements during the year came to $32.4 million, 60% higher.

Repayments of loans at $12.6 million ran 4.4% above those of a year before.

IDB's income was $3.6 million, almost $898,300 higher than a year before. This reflects the increase in the bank's average volume of loans and investments.

Operating expenses, interest on debenture debt and provision for bad debts amounted to almost $2.3 million, some $886,329 higher than in the previous year.

The increase is largely attributable to additional staff and other expenses incurred in the Calgary and Halifax offices opened late in the preceding year.

Also, with a higher amount of debentures outstanding, interest payments almost doubled.

After all expenses, interest and bad debts written off, the balance of profits, $1.3 million, was transferred to the reserve fund which now totals just over $10 million.

Net Profit

Net profit in 1957 represented 3.8% of the average amount of capital and reserves outstanding as compared with 3.9% in 1956.

Funds to provide for a $19.6-million increase in loans and investments were obtained largely by the sale of debentures and to a smaller extent from net earnings.

At Sep. 30, 1957, debt outstanding was $35.5 million, an increase of $17.8 million during the fiscal year.

Since the close of the year, the bank cut its lending interest rate from 6½% to 6%, effective Nov. 18, 1957.

McGill Will Hold Executives School

McGill University School of Commerce is offering its third annual "executive development" summer school May 26-June 20.

Registration will be limited to about 30 "middle management men with growth potential." The school will attempt to introduce them to problems of corporate activity outside their specialties.

Lectures, case studies, seminars, conferences with faculty members and informal discussions are combined to provide executives "with the opportunity to integrate their previous education and experience with the subject matter of the program."

Areas to be covered are finance, marketing management, business policy, and human relations.

Donnell & Mudge Ltd. Sells Its Associated Artists Stock

The "major portion" of its holdings of **Associated Artists Productions Corp.** convertible debentures, common shares and warrants has been sold by **Donnell & Mudge Ltd.,** said Vice-President Harry L. Wolfson in a letter to D. & M. shareholders.

Purchaser was **United Artists Corp.,** Mr. Wolfson told **FP.** He declined to say what amount of Associated Artists securities had been held by his company, or to indicate whether the amount was large or small.

Latest published balance sheet of D. & M., dated Jan. 31, 1957, shows market value of company's investment portfolio at $4,702,736. Liabilities included $2,950,000 5% convertible debentures due 1966, subsequently redeemed or converted into common shares.

"The price for these securities was $12 per share," said Mr. Wolfson in his letter to D. & M. shareholders, "of which $6 has already been payable to the company, and $6 will be received in the form of subordinated debentures or notes of United Artists Corp."

Each $1,000 Associated Artists debenture is convertible into 108 common shares until July 25, 1959.

Earlier, it had been announced in New York that United Artists' subsidiary, **Gotham Television Film Corp.,** had bought 700,000 shares of Associated Artists from "a number of stockholders" (**FP,** Jan. 4), on the terms outlined in Mr. Wolfson's letter.

More than 50% of Associated Artists' outstanding common stock was reported to have been sold to **National Telefilm Associates Inc.** of New York (**FP,** Nov. 23), but now it is reported that a lawsuit over this matter is pending.

Lease TV Films

D. & M. has acquired from **Globe Film Productions Ltd.** exclusive Canadian rights to the library of **Warner Bros.** pictures owned by Associated Artists. This library consists of more than 700 feature films and 550 cartoons, including "Popeye."

Payment consists of $500,000 payable over a period of 14 months, and 1.3 million treasury shares of D. & M. common stock. Shares will not be issued until next October.

This will increase outstanding D. & M. capitalization to approximately 3,965,000 shares, of an authorized six million.

Shares have been trading recently around 80¢ per share. The 1957-58 high was $1.75 in January 1957, low of 60c was set last month.

"Contracts have already been concluded with the Canadian Broadcasting Corp., relating to the showing of a number of films on its network throughout Canada," Mr. Wolfson told shareholders.

Here is the company's latest published balance sheet and income account, in condensed form:

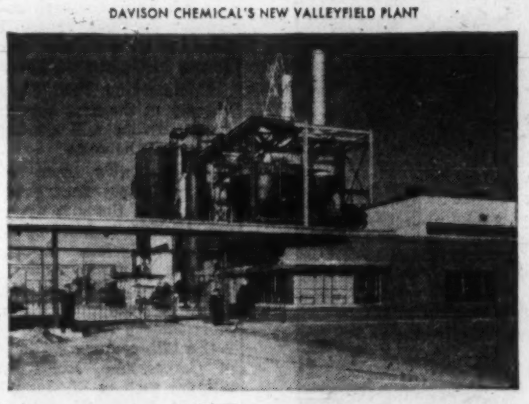
DAVISON CHEMICAL'S NEW VALLEYFIELD PLANT



On a 20-acre tract in Valleyfield, near Montreal, Davison Chemical Company Ltd. has placed in operation a plant for the production of synthetic fluid cracking catalysts, providing Canadian refineries for the first time with a domestic source of supply for this essential chemical. Flexible and equipped to grow with the industry, the plant can meet all Canadian requirements for the foreseeable future.

The operation is affiliated with the Davison Chemical Company Division of W. R. Grace & Co., with long experience and technical proficiency in the manufacture and use of catalysts. Mr. William B. Davis is manager at Valleyfield and sales are supervised by Mr. Alan W. Bennett in Davison's Toronto office.

- This action is typical. When a new industrial plant is being planned for Canada, invariably a copy of Fraser's is one of the first purchases by those responsible for erection, machinery and supplies. In many instances, FRASER'S is on hand even before public announcement of the project.
- Such newcomers to Canada need a complete purchasing reference in the early stages of development. They, like long-established Canadian companies, find FRASER'S indispensable for specifying and locating the thousands of products required by an industrial plant.

This is another reason why FRASER'S is first choice by industrial purchasers — first choice by industrial advertisers.

POST TRAVEL BUREAU

Where to go - how to go - where to stay

Europe's 1958 Big Events

By BEATRICE RIDDELL

This is a red letter year for Europe.

The coming spring and summer will be busy with major international events — in addition to the many annual music festivals, trade fairs, religious celebrations and war memorial ceremonies held at famous battlefields such as Dieppe.

These draw hordes of visitors each year from Canada and every other corner of the globe.

Canadians will have special interest in this year's "extra" celebrations.

The events that will attract the largest number of visitors will be the World Fair in Brussels and the centennial ceremonies at the Roman Catholic shrine of Lourdes, France.

Also bound to attract many Canadians is the first Festival of Wales, to be held concurrently with the Empire Games at Cardiff. And from several European centres a large number of tourists will travel to Israel for this country's tenth anniversary celebrations.

Air lines and steamship companies expect to be booked solid on their trans-Atlantic routes. And a large number of package tours will include one or more of the events plus some favorite European tourist destinations nearby.

Europe's highly efficient, ultra-modern railway and bus systems as well as plane and helicopter services will be operating at peak capacity.

Private Homes

Although plans are being made to add private homes to hotel space, accommodation will be short. Reservations, particularly for travel from June to the end of August should be made immediately.

Here are some details of the year's special events:

The World Fair, Brussels: To be held from April 17 to Oct. 19, this is the first mammoth world fair since the New York affair in 1939.

Canada, one of the first countries to accept the invitation to participate will have one of the choicest locations for its $2,750,000 exhibit.

Theme of the fair is "man in the atomic age." Here you will see some startling modern architecture, some fascinating scientific, industrial and artistic exhibits. Eight international organizations and 46 countries will take part.

PROCESSION at a Lourdes church.

In addition to hotels, some 60,000 government-approved rooms are being made available in private homes. Prices will range from $1 for bed and breakfast for hostel-like accommodation to $9 to $13 for room and private bath in a first class hotel.

Electronic reservation equipment will be installed at strategic centres in Brussels and in the exhibition grounds to speed the allocation of accommodations.

Motorists will find the brand new Motelexpo — largest motel in the world—waiting for them. It will accommodate 4,000 people.

Special Trains

Special trains and helicopters will whisk fair-goers to Brussels from every corner of Belgium and northern France.

Language will not be a problem. Hostesses operating the reception division (with centres throughout Brussels and the fair grounds), will speak a number of languages.

Each visitor will be issued a color flash for his lapel to quickly identify his native tongue and warn the linguist hostesses.

Lourdes Centenary: Probably the most famous of all Roman Catholic Holy places outside Rome, Lourdes will celebrate the 100th anniversary of Our Lady's appearances here to the peasant girl Bernadette Soubirous.

Seven to eight million pilgrims are expected during the year. It is probable that His Holiness, Pope Pius XII will preside at some of the ceremonies.

Religious leaders from Canada scheduled to participate include Cardinal Paul-Emile Leger of Montreal and Cardinal James McGuigan of Toronto.

Commencing Feb. 11, anniversary of the first appearance, the festivities will continue to the end of the year.

An attractive town with a colorful history that goes back to medieval times it appeals to non-Catholic tourists as well as Catholic pilgrims. Located at the foot of the Pyrenees, close to the Spanish border, Lourdes is not far from some of France's most famous tourist attractions —the 13th century walled town of Carcassonne, small Basque villages such as St. Jean Pied-de-Port, and fashionable resorts such as Biarritz. From Lourdes you can "climb" to the peaks of the Pyrenees by telepherique.

To mark this Holy Year, the world's largest underground church — Basilica of Pope Pius X — will open Easter Sunday.

Reserve Early

With approximately 340 hotels in the area, accommodation is normally plentiful. But this year reservations should be made early. The **French National Railways** offer special excursion rates from Paris.

The Festival of Wales: The first national festival this land of music and dance has ever staged will be held from May 3 to the end of October. There will be ballet, music, opera, drama, historical pageants and folk dancing. Welsh and international artists will perform.

The two annual Welsh festivals — Royal National Eisteddfod and the International Musical Eisteddfod — will be held concurrently with the larger festival.

Canadians will be particularly interested in the sixth **British Empire and Commonwealth Games**, to take place at Cardiff from July 18 to 26. Canada, which was host to the games in 1930 and 1954, will send a team of athletes.

Scene of the main athletic events will be the large Cardiff Arms Stadium on the banks of the river Taff and below the ramparts of Cardiff Castle.

Accommodation in Wales is generally good, but reservations should be made well in advance —particularly for Cardiff. There are a number of pretty coastal resorts, particularly in the north and west, which offer excellent hotels, sandy beaches, fine sea swimming and sailing.

10th Birthday

Tenth Anniversary of Israel: This dynamic Middle East country will lure a large number of Europe's tourists this year. This young state, which includes much of the Holy Land, is going all out to celebrate its 10th birthday.

Starting in April, the festivities will continue to May 1959 and will include a varied program of industrial and cultural exhibitions, plays, concerts, sporting events, religious celebrations (Christian and Jewish).

For all its ancient shrines, the Land of the Bible has some of the most modern hotels in the world. And new ones are going up all over the country. Opening of the **Nordau Plaza at Tel Aviv** (to be Israel's largest hotel), is scheduled for April.

Hotel rates have been fixed at 1956 levels to the end of 1958. For a single room and bath at a first class city hotel, the tariff is about $8 to $14, while American Plan accommodation at a resort is around $10.

In addition to hotels, government-approved rooms are being made available for peak festival months.

Cunard Steps Up Atlantic Service

Cunard Steam-Ship Co. announces more direct sailings from Canada to Scotland (Greenock) for next year. Between April 19 and early Dec., the Carinthia and Sylvania (two of the new quartet designed especially for Canadian service) will make 14 westbound and 19 eastbound calls.

The Parthia, which normally sails between Liverpool and New York, will make two summer trips from Canada to Greenock.

WINGS OF THE WORLD'S GREATEST TRAVEL SYSTEM

Bruce Hutchison writes about:

"What we need more than anything in Canada today is a party which would rather be right than be the government . . ."

By BRUCE HUTCHISON

The Liberals' Big Chance

IT WILL BE generally agreed, I suppose, that if the Liberal party did not lose its wits along with its shirt last June it will choose Mr. Pearson as its new leader at its forthcoming convention.

It will be generally agreed also that, barring some extraordinary accident, the Liberal party has no chance to win this year's election, the practical question being whether any party can win it by a clear majority.

From this assumption it does not follow that the Liberal convention is unimportant. The Conservative convention of 1956 didn't look very important at the time either but see what came out of it. In the case of the Liberal convention, however, there is a new and added importance quite distinct from the party's immediate fortunes. There is a chance here much larger than the chance of election.

More government strength needed

In the first place, strong oppositions help to make strong governments and we could use a little more strength in government right now. Weak opposition for some 20 years, until the Conservative party hit the bonanza of the pipeline debate, did our parliamentary system grave harm.

Secondly, and more important, that system urgently needs a redefinition of party policies after a long spell of bewilderment. The main purpose of the Liberal convention (the leadership question presumably being settled in advance) must be to tell us what Liberalism means in modern terms.

Obviously it means, in many respects, just the opposite of what it used to mean when the Liberal party stood theoretically for the old Manchester ideals of laisser-faire, or at least for a minimum of government.

Conservatism, too, has largely reversed itself and, under Mr. Diefenbaker, is not recognizably conservative at all. We actually have no conservative party today by any known definition.

In the case of a government no theoretical definition is required since the government, by its acts, continually defines itself, willy-nilly. Its policy, as distinguished from its pre-election oratory, becomes known and cannot be disguised.

Besides, governments are customarily so overwhelmed by day-to-day business that they have little time to think about long-term objectives and basic principles. A slow exhaustion of such objectives and principles, a little-noted inner bankruptcy of intellectual capital, produced the political bankruptcy of Liberalism last year. This happens to all governments in their old age.

New ideas 'must' for opposition

Thus it is mainly from the opposition, of either party, that we must expect to get fundamental thought, new ideas and a re-accumulation of capital for future use. And that is why the Liberal convention is important to all of us, regardless of party ties.

Now, I have no means of knowing what the managers of the Liberal party have been thinking since the event of last June set them thinking furiously for the first time in two decades; nor what they are preparing to put into the new party platform.

But it seems to me that the details of the platform are relatively unimportant. Platforms are seldom carried out anyway and often are ignored by wise party leaders.

Mr. King, for example, paid hardly even lip service to the platform of the 1919 convention which assured him of office within two years. Mr. Diefenbaker first revealed his talents of leadership a year ago by flatly refusing to print and distribute his party's platform, knowing that it would do more harm than good.

Apart from its usual contradictions, a platform becomes obsolete and irrelevant in many respects almost as soon as it is written. Events move so fast nowadays that conventions, held at infrequent intervals, cannot keep up with them.

No definition of principles

Nevertheless, basic principles of government last, provided any party is prepared to sustain them. The greatest lack and weakness in our politics at the moment is the fact that no party is prepared to define and sustain them.

Every party is replete and overflowing with detailed promises of all sorts, some of them contradictory, but if any voter knows what fundamental policy any party stands for he is much wiser than this voter.

In the field of real political thought we inhabit an era of deep confusion, produced of course by events both foreign and domestic that far exceed our experience and imagination.

Can we expect from the convention of a defeated, sober and repentant Liberal party any substantial new contribution of thought, anything which will be sound several years hence?

Perhaps that is too much to expect so soon after last year's Liberal debacle. We do have the right to expect that the Liberal party will try to be intellectually honest in considering the current problems of the nation even though it has neither the authority nor the genius to solve them.

If we can get that sort of honesty, far short of solutions, the Liberal convention will be highly useful. For assuredly we have not been getting much of it lately from any party.

Issues evaded in muddled year

There is no space here to mention all the immediate issues that have been evaded, distorted or scrambled in this last year of muddle but one or two will illustrate what I mean.

The gravest current danger to the Canadian economy and society is a continuing inflation of costs at a time of declining business that requires a reduction in costs. While every politician knows that danger quite well, I have heard none mention its root cause — a rise in wages as productivity falls. That kind of honesty might impair the labor union vote.

Again, the plain fact is that much of our agricultural industry is inefficiently organized, in units too small and ill-equipped to compete with larger, more efficient and better-equipped farms in other countries.

Yet in all the present argument about the farm problem, in the increasing attempt to subsidize farmers and imitate the unmanageable American parity price system the politicians are strangely silent about the necessity of reorganizing our agriculture as we have reorganized our urban industries.

On the other hand, the farmer rightly replies that he must pay in city prices for the tariff subsidies given to various urban industries of doubtful economic wisdom. It is an unusual politician indeed who will question the economies of any industry within his own constituency.

Then we have the massive new pressure group of ten provincial governments combining to raid the national treasury and to make the national government collect the necessary funds from the taxpayers of the provinces regardless of the effects on the nation. And it is a rare politician who will stand up to the government of his own province.

Above all, we have a national government now planning to live far beyond its revenues and a nation trying to live far beyond its means, or the means of its customers, which is the same thing. That is the largest and most dangerous fact of all, comprehending all others. How many politicians admit it in public?

Ability to face facts honestly

The moral test of the Liberal party, therefore, will not be found in slick political management, in the radiant personality of Mr. Pearson or in any collection of detailed platform platitudes, but in its ability to face facts honestly.

The political test of Liberalism will be found in its willingness to sacrifice the short-run profits of pre-election popularity in favor of the long-run profits of policies still sound long after the polls have closed.

What we need more than anything in Canada today is a party, Conservative or Liberal, which would rather be right (or as nearly right as human affairs permit) than be the government; a party which dares to look beyond the spring of 1958. Shall we find it in the Liberal convention?

Travel Briefs

One of the most unusual exhibits at the Brussels World Fair will be **Pan American's theatre** inside an inflated ball. Built on the principle of the inflated radar domes used in northern defense, the ball will be 52 ft. in diameter.

Audiences of up to 200 will be shown a film on the history of travel from Magellan's historic three-year trip around the world to the jet age, when travelers will circle the globe in 40 hours.

• • •

Qantas Airline (Australia) will circle the globe from Sydney to London via Honolulu, on regular service starting Jan. 14 (subject to completion of government formalities). For the first time Qantas aircraft will cross the U. S., thus becoming the world's only round-the-world airline flying directly between San Francisco and New York. Flights will also be operated to and from Melbourne on the global route, and extensions will be made on the Southern Cross route to London.

• • •

Match-making cruises, limited to unmarried passengers—of both sexes — are being offered by **Gramercy Tours,** of New York. The first (experimental) cruise aboard S.S. Constitution sailed for the Mediterranean for the Christmas - New Year's holidays. The verdict: A great success.

Now a whole series have been announced, with the next voyage (called a "Valentine Party") scheduled to sail Feb. 12 from New York aboard S.S. Independence.

• • •

American Airlines claims to be the first airline in history to fly more than five billion revenue passenger miles in one year — 1957. "Also the world's leading carrier of airfreight," AA topped 85 million ton miles last year.

• • •

Cuba is scene of a lot of hotel building these days. In March, another new hostelry will open— the $22 million **Habana Hilton** of the famous Hilton hotel chain.

• • •

The Lofoten Islands (famous fishing grounds, 100 miles north of the Arctic Circle) are featured in special air-sea tour. Operated jointly by **SAS** and **Bergen Steamship Co.,** the trip is definitely "off-the-beaten-track."

Leaving New York March 20 via SAS, tour includes visits to Stavanger, Bergen and Oslo, an eight-day luxury cruise to Lofoten Islands (where the Gulf Stream keeps the weather mild) and a visit to Geilo—famous Norwegian skiing resort. Terminates in New York April 5, or Oslo April 4 for return at a later date. All-expense tour costs $795.

• • •

With stable government and order once again prevailing in Haiti, tourism has picked up considerably.

And reflecting the importance of dollar-bearing visitors to the republic's economy is creation of a new cabinet post—Secretary of Tourism. First incumbent is Jean A. Magloire (no relation to a recent—and deposed—president by the same name). His job: To improve the tourist product, and encourage more visitors to stay longer.

• • •

Miami's year-old Americana Hotel will have a 15-story, $3 million addition next winter. This will include 125 new guest rooms (bringing total capacity to 600 rooms, suites and parlors) and two new public areas. Work is to commence at the end of this winter's season.

• • •

"Heart of England" cruises will be offered summer visitors to the U. K., according to **Scandinavian Airlines.** River boat trips, such as a five-day voyage between Oxford and Birmingham, or two-weeks' trip from Oxford to Llamgollen, Wales, will feature overnight stops at first class hotels. Frequent calls are made at points of special historic and tourist interest.

• • •

Winter sports time is well under way at Ontario's 33 vacation areas.

For those planning winter holidays, the Ontario government has published an attractive, illustrated brochure giving details of resorts, accommodations, major events, facilities and general conditions for skiing, skating, curling and other sports.

Available free of charge from the Department of Travel and Publicity, Toronto.

B.C. Invites The World To Centennial

It was gold that brought a rush of visitors to Canada's west coast a little more than 100 years ago.

The result was prosperity and before long the union of mainland communities into the Crown Colony of British Columbia in 1858.

But this year, it will be music, opera, drama, that will draw visitors from all over the world. The result: Vancouver will become an international centre of the arts.

In conjunction with centennial celebrations, the province is staging its first major festival of the arts — to be an annual, international affair centering in Vancouver.

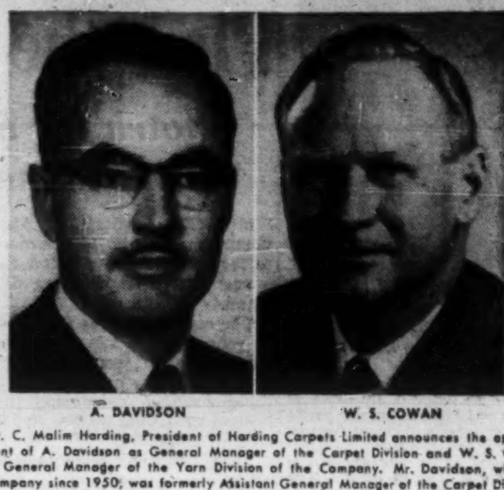
Opening July 19, this year's festival will continue to Aug. 19. And for some time inquiries have been pouring in from every province of Canada, from the U.S. and many overseas countries at the rate of more than 50 a day.

The ambitious and varied program of events features 350 to 400 artists including world famous performers from Canada, Australia, France, Germany, Holland, Norway, Ceylon, the U. K. and U. S.

Leading Canadian artists will be pianist Glenn Gould, and vocalists Lois Marshall, Maureen Forrester, Jon Vickers, Jan Rubes and Montreal-born George London (now a leading star with the Metropolitan Opera).

Other internationally famous performers will be conductors Bruno Walter and William Steinberg; opera producer Gunther Rennert from Germany; Douglas Seale of the Old Vic who will produce a new play by Lister Sinclair; French mime Marcel Marceau; Australian soprano Joan Sutherland; National Dancers of Ceylon and others.

Artistic Director: Nicholas Goldschmidt, head of the Royal Conservatory's opera school in Toronto. Administrative director: Peter Bennett, former manager of Ontario's Stratford Festival.



ANNOUNCEMENT

Harding Carpets Limited

A. DAVIDSON W. S. COWAN

Mr. C. Malim Harding, President of Harding Carpets Limited announces the appointment of A. Davidson as General Manager of the Carpet Division and W. S. Cowan as General Manager of the Yarn Division of the Company. Mr. Davidson, with the Company since 1950, was formerly Assistant General Manager of the Carpet Division. Mr. Cowan has been with the Company since 1933, latterly as Assistant General Manager of the Yarn Division.

Nothing takes the place of the genuine VELVET Lead Pencil!

"Who says so?"

Independent testing organizations say so—in fact tests show that Velvet Lead Pencils *alone* stood up to the rigid testing requirements of leading Canadian business offices and government agencies.

"Pressure Proofing" binds the lead to the wood—that means less breakage, lower pencil costs. All Velvet leads are "Colloidal-Processed", another exclusive Velvet development that puts a needle sharp, long-lasting point on the business end of the pencil. And each Velvet pencil is "Job Rated" (8 lead degrees from 2B to 4H).

When you place an order with your stationer or office supply firm, insist on Velvet—the one pencil that passed *all* the demanding performance tests of Canada's largest offices.

Toronto 14, Ontario

Aluminum Makers Plan the 'Big Sell'

Watch for new uses for this plentiful metal . . .

MONTREAL (Staff) — Aluminum-makers in 1958 expect to lay the sales foundation for a new era of leapfrogging demand.

The reason: For the first time in years there's lots of aluminum to spare. Temporary oversupply means producers can concentrate on developing the myriad new uses for the lightweight metal.

These are the fields where growth looks most likely — and where aluminum's competitors had better look to their markets:

- **Transportation:** In autos, railway equipment, shipbuilding.
- **Construction:** One observer thinks aluminum use could rise to 1,000 lb. per house by 1965. Now: 25 to 30.
- **Electrical manufacturing:** Copper will be the main competitor.
- **Canning and food packaging:** Tin-plate is the target in the former. Use of aluminum foil in packaging already appears to be on a big upswing.

The price outlook is for relative stability. (Price in U.S. is 26c lb., in Canada 24½c.)

There will probably be a scattering of price-cutting incidents in various parts of the world, just as there is now.

The hesitation in growth of demand which produced a surplus of aluminum in latter 1957 will probably continue well into — maybe right through — 1958. Supplies will be excellent.

Sales Development

"Now the big emphasis will be on sales development," says an industry official.

"If a customer wants to adopt the use of aluminum in a big way, we will be able to supply him."

Whistling in the dark?

Not really; there are a great number of new uses to which aluminum can and is being put.

Examples:

▶ **In 1946, the average new car** had two lb. of aluminum. Now: 45. Chrysler averaged 100 in its 1957 models. Aluminum wheels and engine blocks could become widespread.

▶ **They're making bridges** of aluminum; money: containers for storing blood; mufflers. They're mixing it with cement in building blocks.

It's found increasingly in roofing, windows, siding sheet.

That's why there is solid opinion that demand will regain its balance. In the decade 1946-56, it grew at a rate of about 14% compounded annually.

Of course aluminum can't move in one direction and the economy in another. There must be a business upturn of some kind, before the metal will show big new gains.

For instance, it's quite possible that a decline in car sales in 1958 could wipe out the gain made through increased use of the metal per car.

Found New Uses

There was a previous period of oversupply in 1945-46. Very large war-born capacity seemed to tower over peacetime demand. But in a couple of years, the postwar boom had found new uses and expanded old ones.

Then the industry had to get busy with growth plans.

From 1946 to 1956 per capita consumption in Canada rose from 5.4 lb. to 11.5; in the U.S. from 11.3 to 23.1; in the United Kingdom from 7.0 to 12.5; in West Germany from 0.5 to 9.1.

In every case but that of West Germany the increases shown by copper, lead and zinc combined were much smaller.

In 1946 world consumption of aluminum was less than a million metric tons. This had more than tripled by 1955. It may almost triple again by 1965.

The present market has caused a slowdown in expansion, although there is little or no change in long-range plans.

Big story here was **Aluminum Ltd.**'s decision to stretch out smelter growth (**FP**, Nov. 2).

Completion of 80,000 tons of ingot capacity at Kitimat, B.C. by **Aluminum Co. of Canada** — a subsidiary — has been postponed.

Over-all Development

But the company hasn't changed over-all development plans.

Meanwhile, **Canadian British Aluminium Ltd.** has begun production at its new smelter at Baie Comeau, Que. It will be operating 90,000 tons capacity by spring of 1959, hasn't decided upon the timing of another 90,000.

Important thing here is that a reserve capacity will be waiting in the wings, ready to come on stage quickly at the sign that demand is once more swinging high.

This should mean that new markets developed by the hard selling inevitable in 1958 won't become orphans once old markets regain full health.

Aluminum Shares

- Combined net income per common share of four major aluminum producers for 1957 will be about $10.15.
- This compares with the equivalent of $12.73 in 1956, $6.24 in 1951, $2.67 in 1946.

These figures cover these companies: **Aluminium Ltd., Aluminum Co. of America, Kaiser Aluminum and Chemical Corp., Reynolds Metals Co.**

The 1957 downturn in aluminum profits and the fact that supply has caught up and passed demand—at least temporarily — is responsible for this picture in the stock markets:

	— 1957 Prices —		
	Close $	High $	Low $
Aluminium Ltd.	28⅝	53⅛	27½
Alcoa	60	102	59¾
Kaiser	23	46¾	22
Reynolds	33⅝	65¼	32¾

All are quoted in U. S. funds on the New York Stock Exchange.

CNR Expenses Outrun Income

MONTREAL (Staff) — **CNR** in November had a $303,000 monthly operating deficit.

That compares with a net operating income of $3.8 million during the same month a year before.

Falling freight shipments and the general business slowdown show clearly in income figures for 1957.

The figures:

	November 1957 $	1956 $	Incr. $
Op. rev.	60,086,000	65,591,000	5,505,000d
Exps.	60,389,000	62,157,000	1,768,000d
Net op. inc.	303,000d	3,794,000	4,097,000d
	11 months to Nov. 30		
Op. rev.	695,254,000	711,692,000	16,438,000d
Exps.	692,276,000	663,718,000	28,558,000
Net op. inc.	2,978,000	47,974,000	44,996,000d

INVESTMENT IN PRACTICE

Common investment problems . . .

BY PATHFINDER

Case No. 11:

"I get every type of advice on when to buy but no one tells me when to sell!"

Comment:

Timing when to buy or sell brings into focus all the problems of investment.

On the one hand, some investors hold that it does not matter what stock is bought as long as it is at the right time.

On the other hand, many investors disregard timing completely and purchase the stock if its price reflects their idea of good value. Eventually, they say, the market will recognize good value.

While these two approaches are often called opposites, for the average investor they should be inter-related. No one can foretell what the market will do next week. In this age of sputniks, international tension and presidential illnesses, shortrun forecasting is an extremely difficult task.

Nevertheless, markets do have major swings and the wise investor will increase his holdings of volatile stocks when a major upswing is likely and reduce his holdings under the opposite circumstances.

How can he time his purchases or sales? The answer is by comparing values, i.e. by using the value approach.

The tools of yield, price to earnings ratio, cash flow, etc., are of basic importance. If, using these yardsticks, a stock appears remarkably cheap (or overly expensive), then the technical tools of market analysis can be used to see if this is the appropriate time to buy (or sell).

In this way the investor using first the value approach and then the timing techniques, should be able to improve on the good results which experience has proven will be his if he uses the yardsticks of value consistently.

Comments on this and other investment questions are to be found in the 80-page book "How To Invest For Bigger Profits," by Pathfinder, now available for $2 a copy from The Financial Post, 481 University Ave., Toronto 2, Canada.

Imperial Investment Corp. Expanding Stock Holdings

Baloise Fire Insurance Co. of Canada has been purchased by **Imperial Investment Corp.**, Vancouver.

Company was formerly a wholly-owned subsidiary of Baloise Fire Insurance Co. of Basle, Switzerland.

The Canadian company is now being integrated with the finance business of the new owners, and this month Imperial will be in a position to offer automobile insurance to all its automobile dealers, says Imperial's President, Peter Paul Saunders.

The interest rate reduction in recent weeks will reduce costs and have an immediate effect on Imperial's net earnings, the president states. Loans on cars financed in 1955 are now being paid off, and owners will be encouraged to trade in their old models this year.

The automobile industry should have a volume at least as big as in 1957, he believes, and Imperial anticipates increasing business in 1958.

Imperial is offering two specially created classes of preferred shares to holders of two classes of **Laurentide Acceptance Corp.** preferred shares in exchange for their holdings.

The $1.20 (6%) preferred shares, $20 par, of Laurentide would be exchanged share-for-share, for new 6¼% ($1.25) Imperial Investment preferred shares, $20 par; while the 5% Laurentide preferred shares ($20 par) of Laurentide would be exchanged for new 5¼% Imperial preferred shares $20 par.

A sinking fund of $30,000 per annum will be established for the new 6¼% preferred shares, an annual sinking fund of $15,000 for the 5¼% preferred shares. Both issues are callable by lot at $21 per share.

The offer expires Jan. 22. Exchange agents for the 6% preferred and 5% preferred issues of Laurentide are **Montreal Trust** and **General Trust of Canada** respectively.

Directors of Laurentide recommend acceptance of both offers.

There are 50,000, 6% preferred and 25,000 5% preferred shares outstanding. The latter issue is not widely held.

Imperial Investment owns practically all the class B common voting shares and a substantial majority of the class A common shares of Laurentide Acceptance.

Growth of both Imperial and Laurentide has been increased by the consolidation of operation of both companies into a national organization, says Roland Therien, president and general manager of Laurentide.

PLANT CONTEST

The Bituminous Coal Institute of Canada is sponsoring a Canada-wide competition for design of a steam plant. The competition is open to two groups of contestants — registered architects who received their degrees within the last 10 years and architectural students at present attending recognized schools of architecture.

Bond Financing Up 25% in '57

Government, municipal and corporation public bond financing in Canada for 1957 amounted to $3,638,063,917, up 25.7% from $2,893,108,997 in 1956, **Wood, Gundy & Co.** reports.

Sales of Canada Savings Bonds to Dec. 10 amounted to $1,218,766,450 ($802 million to end of 1956). Other Government of Canada financing over two years in term totaled $400 million ($250 million).

Of total 1957 bond financing, $3,050,256,817 ($2,391,616,118) was payable in Canadian funds, and $587,807,100 ($501,492,879) in U. S. funds.

Biggest increase was in government financing at $1,618,766,450 ($1,052,000,000 in 1956).

For the month of December, bond financing in Canada totaled $45,347,587 ($128,339,794 in December, 1956). Corporation financing dropped to $3,120,000 from $50.5 million a year earlier.

Here is a breakdown of bond issues in 1957 compared with 1956:

	1957 $	1956 $
Canada Direct and Guar.*	1,618,766,450	1,052,000,000
Prov. Direct and Guar.*	647,554,000	557,671,000
Ont. Municipal	167,188,008	152,394,283
Que. and Mari. Municipal	156,361,541	158,451,600
West Mun.	37,705,818	42,471,714
Corporation	1,010,488,100	930,120,400
Total	3,638,063,917	2,893,108,997
Pay. in Can. Fds.	3,050,256,817	2,391,616,118
Pay. in U.S. Fds.	587,807,100	501,492,879
Can. Short Term Obligations †	7,480,000,000	6,670,000,000

*Over two years in term.
†Under two years in term.

AMERICAN METAL CLIMAX, INC.

familiar names . . . in a new combination

A new name in metals—American Metal Climax, Inc.—arises from the merger of two well-known companies, The American Metal Company, Ltd. and Climax Molybdenum Company.

American Metal Climax, Inc. now offers expanded facilities and services. Its activities include mining, smelting, refining, marketing, exploration and research. Its products are molybdenum in all forms, potash, copper, lead, zinc, uranium, vanadium, tungsten, tin, solder, metal powders, precious and rare metals, selenium, germanium, tellurium, cadmium, cobalt, bismuth, arsenic, oil and gas, and others. Its interests circle the globe; principal business activities are in North America, Western Europe, and Africa.

ANNOUNCEMENT

Studebaker-Packard Announcement

The directors of Studebaker-Packard of Canada Limited announce the election of Gordon E. Grundy as president of the company. Mr. Grundy has been with Studebaker since 1946, and moves up from the position of Vice-President. A chartered accountant by profession, he served during the war as Deputy Chief, Prices Division, Wartime Prices and Trade Board, and is president of the Hamilton Chamber of Commerce.

Mr. Grundy brings to his new post a wide experience in corporation finance and management.

Getting Ahead

Astute businessmen plan for success; they read The Financial Post because it helps them make right decisions. Yearly by mail in Canada, $6; elsewhere $7 yearly.

HOW DO YOU PICK SPECIAL STOCK SITUATIONS?

Do you study news of all developments across Canada, in industrial, mining, and gas & oil stocks?

Do you have a background of market experience, and technical knowledge of mining and geology, and oil developments?

Are your price decisions aided by plotting charts of the action of the particular stock, and relating it to the minor and major cycles of the New York market?

All these are used in providing the weekly bulletin service of INVESTMENT INDICATOR for those who haven't full time themselves to search for opportunities.

"How to Invest for Bigger Profits"

$2 postpaid

Originally published in The Financial Post, each chapter in this valuable 80-page book is sound and authoritative.

- How to measure investment values
- What you should know about timing
- Spreading investment risks
- Hot tips — or analysis?
- plus many other sections of unique help for investors. Complete with comprehensive index and glossary of terms.

"How to Invest for Bigger Profits" was written especially for The Financial Post by Warren Goldring, author of the Pathfinder series in The Post and an investment specialist with broad analytical experience. Easy to read, easy to understand, this book gives the essential principles for investors . . . for students in economics and business administration . . . for all who seek profit from the development of Canada's business and industry.

Today, order copies for yourself, for your business associates. Ideal as gifts for your friends in business. $2 postpaid anywhere. Just tear out this ad, attach to your letterhead or sheet of paper with $2 and your name and address. Mail to The Financial Post, 481 University Avenue, Toronto 2, Canada.

Lull Gives U.K. Time For Our Next Boom

OTTAWA (Staff)—The drive for more Canadian trade with Britain has hit a bad time.

Canadian imports from other countries have been on a downward trend for nearly a year now.

The last peak month, according to seasonally adjusted figures, was February, 1957.

Ever since then, with ups and downs from month to month, the trend has been downwards. It is not expected to turn up again at least until mid-year.

The last three years gave other countries as good a chance as they will ever have to sell their goods in Canada.

As always when Canadian expansion leads to a surge in demand for goods and services, imports shot up faster than Canadian production.

By the same past experience, imports are liable to drop more rapidly than domestic production when Canada hits a temporary decline or pause in expansion.

Unless this current situation is explained, the drive for more Anglo-Canadian trade may be badly misjudged.

British exporters may be discouraged unnecessarily; and Canadians already skeptical about the prospects may write off the effort too soon.

Later this month, the Canadian Trade Mission which toured U.K. in November will meet in Ottawa to complete a report and arrange for continuance of its endeavor.

Don't Expect Too Much

The psychology of the public — and of business — being what it is, the most important thing the Canadians can say to the U. K. may be warn them not to expect too much of 1958.

Canadian and British officials are both saying that they hope to increase U. K. exports to Canada above the 1957 level.

The chances are against them, not through any fault of the British, but because Canada's total need for imported goods will be reduced.

If the members of the Trade Mission present a complete picture at their forthcoming meeting, they will say this openly. And they will point out that—

—The British can only maintain their 1957 rate of sale to Canada, by bringing about a "diversion" of trade from U. S. or other foreign countries.

If imports from U. K. do not decline in 1958, while imports from all the rest of the world do, British exporters will increase their share of the Canadian market even if their total sales here do not go up.

The severest blow to short-run British hopes of selling more is the expected lull in development of new plants, mines and industrial facilities. Capital goods will be cut back most sharply this year.

And capital goods are precisely the type which had been thought to represent U. K.'s biggest opportunity in this market.

Chance To Prepare

Once it is recognized that this is the worst time since the beginning of 1955 to sell capital goods here, the lull in demand may prove a blessing in disguise for U. K. exporters. It gives them a grand chance to prepare the way for fuller participation in the next round of Canadian expansion.

While things are relatively quiet, British firms can start to make themselves known to Canadian buyers.

They can find their own way around the Canadian market, and devote most of their effort to make sure they have adequate sales, maintenance and service arrangements. Above all they can tackle their publicity and public relations in Canada.

British neglect of these essential aids was one of the strongest impressions left on the Canadian Trade Mission.

Lack of publicity, or of any effort to improve public relations, appeared as one of the main reasons why so many Canadians have misleading ideas about British industry.

Both officially and unofficially the British have often complained that Canada was underestimating their capabilities. But they have not done much themselves to correct the impression.

Paid advertising is, of course, an important part of the publicity campaign U. K. exporters need.

But it would be wrong for British businessmen to conclude that Canadian advice is merely an attempt to boost their advertising.

Even more important is the vast neglected field of public relations, which is not a matter of spending money but of being alert to seize opportunities.

Opportunity Missed

In one U. K. electrical plant the visiting Canadians were astonished to find a working model of Niagara Falls. The plant is making the lighting equipment for the falls: The model is for testing underwater lighting effects.

This high newsworthy project surprised, not only the Canadians, but the British newsmen with the party. Apparently it had never occurred to the firm that it was sitting on a story which might have brought thousands of dollars' worth of publicity. And it was not a small unknown firm: It was **General Electric of the U. K.**

Again, at Metrovick's impressive factory, the Canadians found one of the bays (five stories high) filled by a huge turbo-generator labelled "Calgary."

It had never been photographed for the newspapers; and when Metrovick executives were asked about their publicity arrangements for the final installation by **Calgary Power Ltd.** they looked blank.

It had never occurred to them to send over a publicity man or even to use Canadian firms to make a bit of a splash.

Possible ways for Canada to assist the new British selling drive will also be considered by the trade mission at its forthcoming meeting here.

Although no plans have yet been formulated, some people favor the establishment of a small office which, with the help of the dollar-sterling trade council, could act as a sort of expediting centre.

This would be following the pattern of an office which the original dollar-sterling trade board ran for a while in 1950.

Its essential work was to follow up and investigate the sales that went wrong, find out why the British offers were not being accepted or why the Canadian buyers were not giving U. K. goods a fair chance.

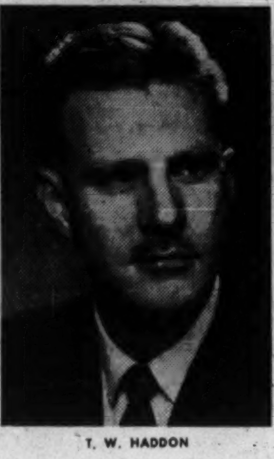
Operating strictly within the agreed conditions (Example: The goods must be competitive and the alternative supply must be foreign, not Canadian) the office was able to ensure that Canadian firms placing large orders abroad gave U. K. exporters a chance.

And if they still failed to get the business, it could make sure that they knew what was wrong and were encouraged to correct it.

Some similar kind of "expediting" office may be established again as a result of the Trade Mission's report.

ANNOUNCEMENT

NESBITT, THOMSON APPOINTMENT



T. W. HADDON

who recently joined the Toronto sales force of Nesbitt, Thomson and Company, Limited. Mr. Haddon has been associated with the Company since 1956, having been in charge of the firm's Ontario and Western Canada Municipal Department. A graduate of the University of Toronto, he obtained valuable experience in business administration prior to joining the firm, and presently is a member of the American Marketing Association.

Quebec's Credit Bill Shock Eases with Revision Rumors

MONTREAL (Staff) — Quebec's controversial retail credit bill will probably have been revised by the time it comes up for second reading.

The bill is intended to protect the "small man" who finds himself in debt.

But in the opinion of the provinces' retailers, credit agencies and lawyers it went much too far (**FP**, Dec. 28), could have caused a drying up of retail credit.

Premier Duplessis, who tabled the bill, has been bombarded by briefs suggesting alterations.

The main complaints:

- **That under the new bill goods bought** on credit could not be seized for repayment.
- **That there are no penalties** for incurring further debts once under protection of the new law.
- **That the law only allows seizure** of a portion of the debtor's wages only, not all income from any source.

Feeling in Quebec City this week is that Duplessis has accepted the majority of suggestions for amendment.

One source close to the provincial government told **FP**: "It was really just a case of sloppy drafting. It was never intended to mean what it does. The government has no intention of taking away all protection from creditors."

Betting now is that all major suggested alterations will be included when the bill comes up for second reading. It was originally due early this week, but was delayed for further revision.

The initial shock having worn off — and cheered by favorable reports from the provincial capital — Quebec's retailers and credit men were breathing a little easier this week.

But until the bill gets its second reading, and the revisions are revealed, these are tense days for credit men.

Engineers Bid for Status Use Diplomacy Not Muscle

Canadian engineers, particularly at the lower levels, are fretting about conditions of employment.

They're not joining unions — in fact, they're "anti-union." But more and more, they're forming "staff associations" to "talk things over" with management.

- **Major bone of contention:** Status and privileges.
- **Salary, while not a minor** matter, hasn't generated the same heat as "professional recognition."

Growth of the associations stems from increase in the practice, by large companies, of putting teams of engineers to work on common projects. Facilities accorded to the junior members of the teams are often not dissimilar to those accorded clerical staffs.

One association, representing about 100 engineers employed by an aircraft company, currently has these beefs:

—Its members punch time clocks.

—They eat from a lunch-wagon and would like a cafeteria.

—They feel that they perform many functions which technicians would do as well.

How many of these associations are there?

Ten large ones, somewhat similar to the aircraft group, plus a number of smaller ones, now function in Ontario. There are several large associations in Quebec.

About 70% of Canada's 30,000 professional engineers work in one or other of these two provinces.

The tendency among Canadian engineers — to be diplomatic rather than forceful with management — is sharply at variance with the tendency among U. S. professional engineers.

In the U. S., about 12% belong to unions and these are growing.

Engineers were represented in several Canadian unions after the war, but this representation has been falling off. The Canadian engineer thinks it "unprofessional" to join a union.

Defense Contracts

Here's a list of defense contracts for $10,000 or more awarded to Canadian firms during the last half of November by the Department of Defense Production and Defence Construction (1951) Ltd.; it totals $6,766,494. Largest contract, valued at $1,001,598, was placed with **Canadian Aviation Electronics Ltd.**, Montreal, for field maintenance systems for aircraft fire control systems.

The list excludes amendments to earlier orders and anything on the secret list.

Canada Safeway Sales Rise 10%

Consolidated sales of **Canada Safeway Ltd.**, Winnipeg, subsidiary of **Safeway Stores Inc.**, Oakland, Calif., for the four weeks ended Dec. 28, rose 9.86% to $17.8 million ($16.2 million in comparable period a year earlier).

Sales for the 52 weeks ended Dec. 28, amounted to $214 million ($189 million), an increase of 13.6% over the year.

There were 170 retail stores in operation in Canada in 1957 (156 in 1956).

ANNOUNCEMENT

Industrial Acceptance Announces New Officers

G. E. WEMP

J. H. RANAHAN

J. B. PENNEFATHER

Industrial Acceptance Corporation Limited announces the election of G. E. Wemp as Chairman of the Board of Directors, and the election of J. H. Ranahan as President and J. B. Pennefather as Executive Vice-President of the company, effective January 2nd, 1958.

Mr. Wemp joined I.A.C. in 1926 at Windsor and in the succeeding years managed offices at Toronto, Montreal, Calgary and Regina. In 1931, he was appointed Assistant Vice-President and Western Supervisor in Winnipeg, returning to Head Office as Assistant General Manager in 1932. Mr. Wemp was elected a Director in 1943, appointed Vice-President and General Manager in 1944 and Executive Vice-President in January, 1951. He became President of I.A.C. in December, 1955.

Mr. Ranahan came to I.A.C. as Collection Manager at Windsor in 1927 and became Manager of the Montreal branch shortly afterward. In 1930, he was appointed Sales Manager and in 1937 Assistant Vice-President in Charge of Sales. Mr. Ranahan became Vice-President and General Sales Manager in 1944 and General Manager in 1951, when he was also elected a Director of the company. He was appointed Executive Vice-President in December, 1955.

Mr. Pennefather who also joined I.A.C. at Windsor in 1927, became Secretary-Treasurer in 1930 and Comptroller in February, 1946. He was appointed Vice-President and Assistant General Manager in 1950. In 1956, he became Director of Operations and in December, 1957, was elected a Director of the company.

The Financial Post

Canada's National Weekly of Business, Investment and Public Affairs

"Indian Lake Estates, the multi-million dollar luxury residential development bordering Lake We-oh-ya-Kapka is well underway. Comprising about 7,000 acres, this development will have about 6,500 half-acre residential sites—the rest being devoted to palm-lined avenues and beaches, a modern club house, golf course and other recreational facilities."

The News

WASHINGTON, D.C.

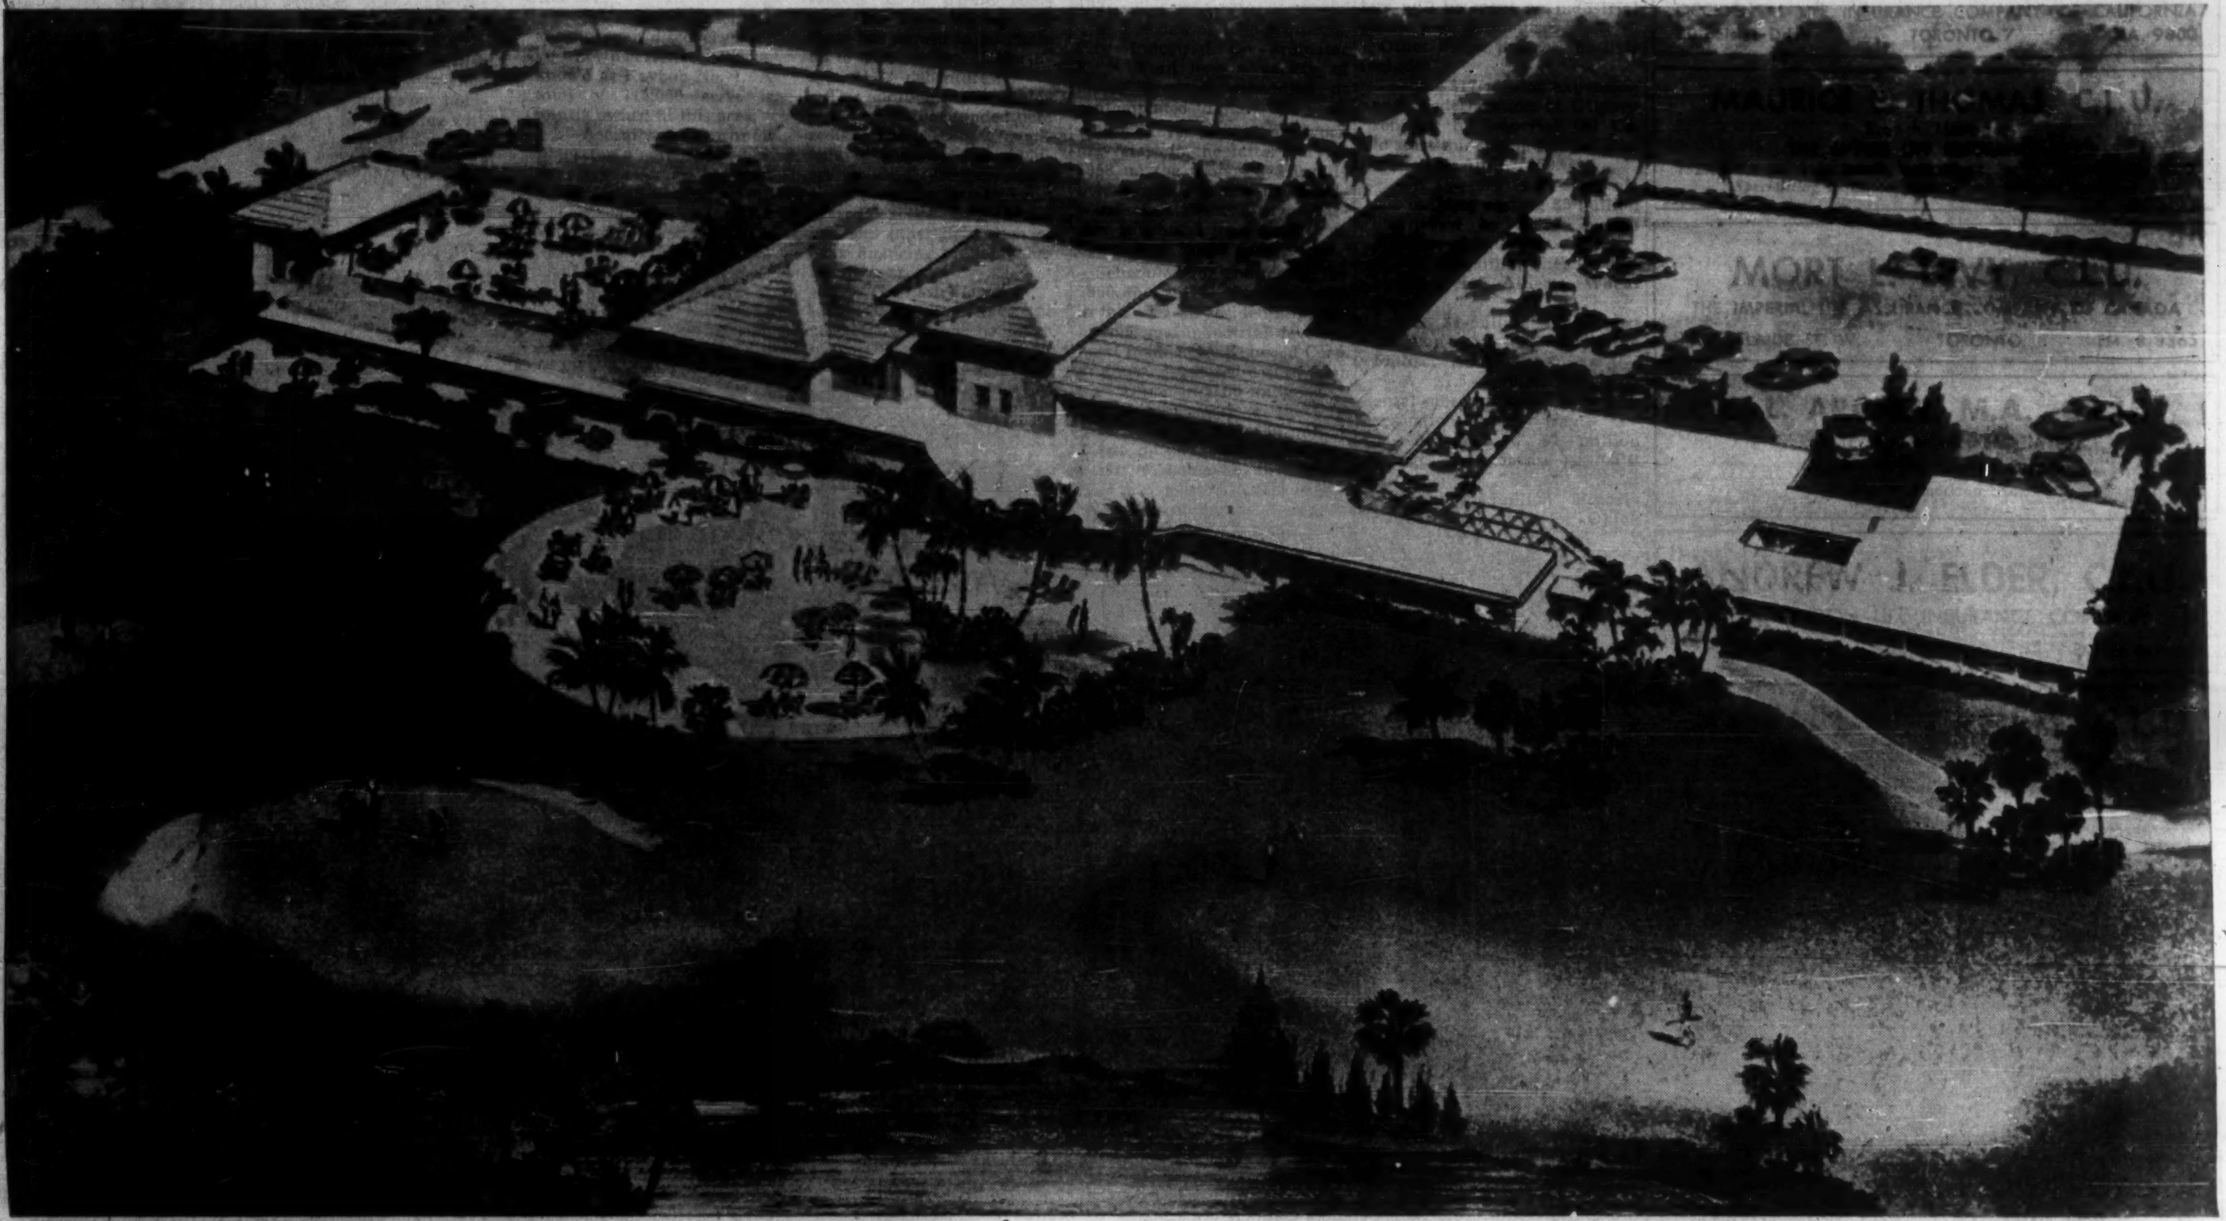
"Approaching the development, I could see signs of tangible activity. There is a vast palm tree and flower planting program which is now adorning over 35 miles of completed and paved streets. The country club is nearing completion. Street lighting fixtures of the latest mercury vapor type are being installed."

THE MIAMI NEWS

"It is no wonder that Indian Lake Estates counts among its property owners people from 43 States and Canada. Visitors to the property are immediately impressed by the construction that is taking place. Wherever you look, plans are rapidly becoming reality in what promises to be an outstanding example of the best in country club living — not only in Florida, but in the entire country."

THE CHRISTIAN SCIENCE MONITOR

"Mr. Ackerman brings to Indian Lake Estates the vision of an idealist combined with the get-up-and-go of a practical builder. He is here, there, and everywhere, directing, persuading, and energizing the crews that are gradually building the community into a pattern that the eye can follow. It's fabulous even for Florida."



Club House for Indian Lake Estates—planned for completion this Spring. Designed by Carlos B. Schoeppl & Associates of Miami, this spacious club house is adjacent to the 18-hole golf course (under construction).

PRIVATE COUNTRY CLUB COMMUNITY IN FLORIDA

INDIAN LAKE Estates

In South Central Florida

18 MILES SOUTHEAST OF LAKE WALES

Progress continues in this vast undertaking of creating Florida's first private city — Indian Lake Estates, comprising 7,000 acres . . . "In one of the most scenic areas on the continent," says The Financial Post, Canada's National Weekly. As reported in this financial weekly, "This development will have 6,500 half-acre residential sites — the rest being devoted to palm-lined avenues and beaches, a modern club house, golf course and other recreational facilities."

High above sea level (a gradually rising elevation from 64 to 115 feet) and away from enervating humidity, this beautiful lake property is midway between the Atlantic Ocean and the Gulf of Mexico. We are in the very heart of Florida's richest citrus region, and within a short distance of world-famous Cypress Gardens. Only minutes away are Florida's most outstanding cultural attractions . . . the Bok Singing Tower, near Lake Wales, which draws more than a million people every year to South Central Florida; the Passion Play; and The Great Masterpiece depicting da Vinci's "Last Supper" in a tile mosaic.

Indian Lake Estates borders beautiful Lake We-oh-ya-Kapka. This 15-square mile, spring-fed lake has a firm, sandy bottom sloping gently from the shore, and the water is superb for bathing, water-skiing and boating. Anglers in great numbers find Lake We-oh-ya-Kapka a fisherman's paradise. Here in a setting of indescribable beauty is a limitless water sports playground. As Dick Pope, owner of world-famous Cypress Gardens, said: "Indian Lake Estates is an asset to Florida. Any community in Florida would be proud to have its beach and big pier."

Town and Country Magazine's recent quote sums up the ultimate goal of Indian Lake Estates — "From the palm-lined avenues to the wide beach fronting on the 15-square mile spring-fed lake, everything is being planned to make this one of the outstanding country club residential communities in the country." The wide acclaim and continuing success of this endeavor are due to the evidence throughout the development of plans fulfilled even in excess of promises made to prospective purchasers.

The unique advantages of this private Country Club Community appeal to discriminating people who desire the privacy afforded here. The varied recreational facilities being provided for the exclusive use of Indian Lake Club members include: a modern, beautiful club house and 18-hole golf course (both in advanced stages of construction); wide, white sand beach; 1,100-foot private pier, longest fresh water pier in Florida (now completed); and a marina for 2,000 boats (almost completed). So great has been the interest in Indian Lake Estates that it now counts among its property owners purchasers from 43 states and foreign countries. Every modern convenience will be provided, as well as the wide diversity of recreational advantages. You can buy with complete confidence at this widely acclaimed new private city in the making, which has been called "Fabulous even for Florida" by the Christian Science Monitor.

Beaver Club

The new purchases of this investment club

B.A. OIL, NORTHSPAN

Here is the monthly report by the fund manager to the members of the Beaver Club on the fund's operation:

On Dec. 30 we made the following purchases:

(1) Five shares **British American Oil** at $33 to yield 3.03%. This brings our holdings of BA to 10 shares with an average price of $39.

(2) Twenty-five shares **Northspan Uranium** at $3.20. We now have a total of 50 shares of Northspan with an average price of $5.23.

Our original purchase of BA was in August 1956 at $45 per share. Subsequently the stock rose to a high of $57⅞.

In our first report on this company we discussed the significance of its acquisition of **Canadian Gulf's** assets in June 1956. Although the ownership of these very large gas and oil acreages in Western Canada will make only a small contribution to profits of the immediate future, their long-term potential could mean a much higher income for BA's shareholders.

The general decline in stock prices and the particular conditions surrounding the oil producing industry, have brought about a substantial reduction in the price of BA shares since our initial purchase.

The pendulum of investor sentiment has swung widely from great optimism for the oil stocks to gloomy pessimism. The shortage of crude oil created by the Suez crisis has now changed to an oversupply.

Imports of Canadian crude to the U.S. are suffering from increased U.S. restrictions and reduced tanker rates.

The latter condition gives South American crude a competitive advantage over Canadian.

Long-Range Picture

These factors are all of a short-term nature. In our opinion the favorable long-range picture which was so clearly recognizable before, is still visible to those who can see through the haze of current gloom.

As for BA itself, not only are all the supporting arguments in our original report still true, but additional new developments give further reason for making this company an attractive situation. Among the most significant of these are:

1—BA's participation in an important discovery well in northwestern Alberta, known as Kaybob No. 1. A total of 115,000 acres is jointly owned in this area.

2—Recently announced plans for a new 20,000-bbl. per day refinery at Port Moody, near Vancouver.

3—Expansion of the Montreal, Clarkson, Edmonton and Pincher Creek plants.

Our original purchase of 25 shares of Northspan Uranium has suffered not only from the general depression in the price of uranium shares, but also from the misadventures of the Northspan property itself. The stock has dropped from its year's high of $9 to a low of $2.84.

Northspan has the largest of the government uranium contracts and its planned initial mill capacity of 9,000 tons per day makes it the largest of all the uranium operations.

Northspan is divided into three separate plants and properties—the Lake Nordic mill with 4,000-ton capacity, the Panel mill with 3,000 tons and Spanish American's 2,000-ton operation.

Northspan's major problem has been in the Spanish American mine where the originally scheduled operating date of August 1957 has now been deferred to April 1958. This delay has been caused by unusually severe water conditions in the sinking of No. 1 production shaft at a depth of 2,474 ft.

Due to badly fractured ground and water pressures in excess of 1,000 lb. per sq. ft., the shaft took about three months to move through a depth of approximately 100 ft.

This added expense and other unexpected problems which have been common to most of the Blind River operations, have resulted in a sizeable capital cost overrun and additional financing has been required.

Fortunately Northspan can draw upon the substantial resources of its parent company, **Rio Tinto Mining.** Rio Tinto has agreed to purchase up to $8½ million of Northspan 6½% debentures.

This addition to the original $70 million of funded debt reduces the cash flow available to common shareholders by about 85c per share. No doubt the capital cost overrun exceeds the $8.5 million and other debt such as bank financing probably has been incurred.

The Cash Flow

However, we believe the market has given too much weight to this unfavorable development. The cash flow during the contract period had been estimated at $6.50 per share originally, and even if it is now reduced by half this amount, it would still be equal to the current price of the shares.

The first 2,000-ton unit of the Lake Nordic plant is now in operation and shipments of uranium concentrate began at the end of November. The second 2,000-ton Lake Nordic unit will be ready at the beginning of the year. The Panel plant is also scheduled to commence mill operations early in 1958.

We feel that at current levels uranium stocks offer attractive defensive qualities as well as potential profits. This industry has nothing to fear from deteriorating economic conditions. The price of its product is fixed for at least the length of the government contract period (1962-63).

Changes in technology may come fast and uranium may be superseded by other elements, but we feel it is a good bet that shareholders will receive a rewarding payoff before this happens.

The Beaver Club is a typical operating investment club. It has 21 members. Its stock purchases and sales are decided by a professional investor.

Stocks bought for the Beaver Club are not necessarily suitable for all investment clubs. Beaver Club members are nearly all young and their incomes are quite substantial. They can afford to take risks of loss which are inappropriate for some clubs.

The Beaver Club policy is quite definitely an aggressive search for attractive longer-term growth investments. —The Editors

Beaver Club Monthly Statement

To Dec. 31, each original Beaver Club member has contributed $270. This interest in the fund was worth $252.01 on Dec. 31.

Calgary Sees $35 Million Big Buildings This Year

Calgary expects that its commercial and industrial construction this year will be worth more than $35 million and that housebuilding will have a considerably better year than in 1957.

In a review of 1958 prospects, City Industrial Co-ordinator K. S. Ford lists a variety of major products scheduled or contemplated to start this year.

He believes preliminary work may start in the latter part of 1958 on the proposed $10-million shopping centre by **Woodward's Ltd.**, Vancouver on former ranchland in a newly annexed area to the south.

Scheduled for completion by 1960, this will be the focal point in the over-all residential, commercial and industrial development planned by **Kelwood Corp.** at a total estimated cost of from $70 million to $100 million.

A possible start on the Calgary phase of the $50-million Western Canada expansion program of **Loblaw's Groceterias Ltd.** is also listed.

Ford says unofficial reports indicate the company will likely build between five and 10 supermarkets in Calgary as well as that due for early opening this year in the North Hill shopping centre.

New hotel construction, he reports, may include a multi-million dollar luxury hotel on the north hill, a new medium-sized hotel downtown, another $350,000 establishment on the MacLeod Trail and an expansion of the Palliser.

At least several million dollars will be spent on industrial plants and warehouses.

Other major projects he lists include:

—The $17-million expansion and modernization of Calgary refinery by **Imperial Oil Co.** to start this spring and be concluded by April, 1959.

—A 15-story to 20-story office building costing $5 million downtown by **Lord Iveagh (Guinness)** interests.

—A $2-million head office building for **Alberta Wheat Pool.**

—A $4-million main post office on a site just west of the Palliser Hotel.

—A $1.5-million medical-dental office building for which excavation is under way.

—A proposed $1-million bridge or overpass at **CPR** Alyth yards.

—A $1-million airport-hangar expansion for which tenders have been called.

—A $1-million, four-story addition to the Petrochemical Building occupied by **Sun Oil Co.**

CPR Earnings Down 7.7%

MONTREAL (Staff) — Net railway earnings of **Canadian Pacific Railway Co.** in November were up 16% at $4,994,393 ($4,304,785 in November, 1956).

This brings railway earnings for the 11 months to $34.5 million ($37.3 million), down 7.7%.

Here are details:

Steinberg's Sets the Pace For Maritime Supermarkets

Special Correspondence

SAINT JOHN — A powerful new contestant has entered the lists for the growing supermarket trade in the Maritimes.

Steinberg's Ltd., big Montreal chain, has opened a "pilot" store at Oromocto. The area has an estimated $12 million payroll.

A full-scale Steinberg's is expected to open its doors at Oromocto by August, part of a large shopping centre development.

Supermarkets have been expanding rapidly in the Maritimes with **Dominion Stores Ltd.** and the Maritime-owned **Sobey's Ltd.** chain sharing the field.

In Saint John Dominion has three stores. A fourth is to start immediately under a $150,000 building permit.

Sobey's have two stores — a third scheduled in the uptown district soon.

Chairman of the Oromocto Board of Commissioners, H. I. Evans, estimates that the $12 million area payroll will result in purchasing power at the town of more than $5,5 million annually.

S. D. Miller and Sons of Montreal, who built the Dorval Shopping Centre and Westgate, near Ottawa, are to erect the shopping centre.

Civilian population of Oromocto is scheduled to rise rapidly to 15,000 and more than 1,400 homes are either completed or in process of construction.

A 700-car parking lot is part of the shopping centre. There are already more than 23 miles of streets.

Oromocto is a "planned" community, conceived as a supporting civilian centre for the vast Camp Gagetown establishment which starts at the town border.

Home Builders Try to Halt 'Feast-Famine'

By CLIFFORD FOWKE

Canada's $1.5 billion home-building industry — key to prosperity of scores of manufacturing, service and supply industries — will get its strictest-ever check-up next week at the annual convention of the National House Builders Association.

More than 300 builders and allied industrialists from across Canada are gathering in Toronto with the specific idea of threshing out their problems and seeking methods of stabilizing their industry which has see-sawed between near-depression and record-breaking volume in recent years.

One of the most representative speaking panels of government and industrial authorities ever to get together on the subject will help review the position.

The problem: How to keep the industry stable, healthy and growing by smoothing out financing, land and cost difficulties.

The Position: New housing unit starts hit record high levels in 1955, fell off somewhat in 1956, sunk to a seriously low level by mid-1957, are now setting new high records for winter work.

The Remedy: The NHBA 15-point brief recently submitted to Ottawa asking, in general, for bigger NHA mortgages, a steady supply of mortgage funds, federal-provincial approach to providing serviced land, and NHA financing for resale homes.

Part of the NHBA demands have been met by recent revisions of NHA to increase mortgages and reduce salary qualifications but the builders want a lot more.

The present revival in housing is due to a direct government-lending fund of $150 million for mortgages made available in August last and which has all been taken up.

Many builders believe this revival will be only temporary unless steps are taken to ensure a continuing flow of funds for home financing.

They want to be rid of the "feast and famine" financing which highlighted 1956 and 1957.

Big Question

Another big question is the high cost of serviced land for housing in the major centres.

The recently-formed Urban Development Institute of Ontario, which is reported to be the forerunner of an inter-provincial movement among land developers, is fighting a trend among municipalities to increase levies and other impositions on land development.

To discuss these and other problems with the builders, **Central Mortgage & Housing Corp.**, the government housing agency, will be forward with a big delegation including CMHC President Stewart Bates and the five regional supervisors from across Canada.

Federal Minister of Public Works Howard C. Green, will also speak.

Other special guests will be most of the 16 members of the minister of public works' special housing committee.

Outlook Survey

A survey on the outlook for home builders during the next five years will be given by Frank Cortwright, former vice-president of the U. S. National Association of House Builders, and William H. Scheik, executive director of the Building Research Institute in Washington will talk on home building research and new methods.

John W. Kerr, vice-president of the Canadian Electrical Manufacturers Association and chairman of its Adequate Wiring Committee will underline need for co-operation between builders and their suppliers in merchandising.

Details of NHBA progress in building costs research will be given. Backed by government housing agencies, the association's research committee started to plan five budget research houses. The first at Preston, Ont. is now completed.

A feature of the convention will be a 40-booth suppliers' exhibition of building products.

CONSTRUCTION EQUIPMENT

Market Fight May Fold Up But Dealers Take No Risk

Construction equipment manufacturers and distributors, catering to a $250 million market across Canada, are preparing for their toughest market fight in years.

But it may never develop.

Threat arises from a three-fold surge of used equipment now starting to hit Canada. The answer depends on whether customers have use for it and whether they think it is good economics to buy.

Sources of the used equipment originally worth many millions of dollars:

Kitimat: Machinery and equipment used to build the **Aluminum Co. of Canada's** Kemano-Nechako project in B.C. comes up for sale by auction in Vancouver on Feb. 18. It includes locomotives, large cranes, tractors and trucks of every description.

The Seaway: With some big jobs ending now and others due to terminate over the next 12 months, a considerable quantity of used construction equipment is expected to come on the market from the contractors engaged.

The U. S.: A flood of direct mail advertising for used equipment is coming into Canada and may mark the start of the throw-outs from the $500 million replacement program which U. S. contractors are expected to carry out over the next five years.

So far as dealers are concerned, the big question is the condition of the equipment. Some of it will have had rugged treatment but in others it may have years of useful life ahead.

And, as they have done in similar though smaller cases before, the dealers might well buy it themselves, service it and come out with a sales profit.

The Canadian Association of Equipment Distributors is watching the situation closely. Most concerned by the Vancouver auction and the threats from the U. S. are the western firms.

Real worries for Ontario, Quebec and points east are not likely to start until the Seaway slows down and the threat of U. S. used equipment develops much further.

McGill Growth In First Step

MONTREAL (Staff)—McGill University's proposed $50 million growth plan has taken its first successful financial step.

The McGill Fund Committee's drive for $6 million was pronounced a success last week. Almost 4,000 individuals and companies have contributed $6,172,705.

Additional donations of $1.5 million from the Province of Quebec and $1,500,035 from J. W. McConnell, senior governor of the university, also have been received.

This allows McGill to go ahead with its five most urgent needs:

Women's residence at Macdonald College; another engineering building; medical science centre; arts building annex; rehabilitation of the biology building.

Work has already begun on the women's residence, contract will soon be let for the new engineering building.

Parliament's Business

By FP's OTTAWA STAFF

'Foolish to Cut Military'

OTTAWA (Staff)—House of Commons finally got around last week to finishing its annual examination of National Defence spending.

The bill for fiscal '57-'58: $1.75 billion—about one third of the entire federal expenditure.

In two days of quick going, members learned, as expected, that the Conservatives had not made any substantial cuts.

The reason, according to Defense Minister George Pearkes: "Until there is some comprehensive disarmament plan worked out, it would be foolish for one country (i.e. Canada) to start paring down materially on expenditures."

In the item-by-item review, the members learned:

- It costs $90 million a year to keep the RCAF's air division in Europe under NATO, and another $30 million for the army's independent brigade.
- The 2nd Battalion of the Royal Canadian Regiment has been earmarked for possible "brush war" service under the UN anywhere in the world.
- Canadian and U. S. air forces are drawing up the first draft of what will eventually become the political document spelling out how the two countries will co-operate in continental air defence.
- The navy, now shorn of its Arctic pride, the $25 million icebreaker HMCS Labrador, is looking at nuclear-powered ship design.
- Reserve army units across the country will be asked to contribute personnel for the 45-50 "mobile columns" to be set up for civil defence duty.
- Defence Department is going ahead with a plan to merge into one the three medical services in the armed forces.
- Permanent housing is to be provided for about 70% of the army's fighting units.

Government Votes Itself More Money

Because the House of Commons had still not approved federal spending plans for fiscal '57-'58, it was forced this week to dole out another chunk of spending money to the government.

After devoting much of one day in debate which skirted widely around the subject of finance (life expectancy in Asia, the **CPR**, oil exports), resolution approval and then first, second and third reading were given in a matter of minutes to the sixth appropriation this year—$272.4 million needed for January bills.

Since 10 months' worth of the year's money has now been approved, the Commons has for all practical purposes lost its cherished right to give critical examination to the national outlays.

The saving grace: The estimates were drawn up by the Liberals, now the official opposition, and could have been altered by the Conservatives, now in power.

Succession Duty Act Changes Proposed

First move toward up-dating the Dominion Succession Duty Act was taken this week with presentation of a resolution by Finance Minister Donald Fleming.

The resolution indicates:

—A new act will go on the books although it will be a revision and simplification of present "appropriate" provisions.

—An important difference will be "to provide that the tax on property passing or deemed to pass, on death, be computed by reference to the property comprising the estate of the deceased rather than the property contained in the bequests from the estate to the beneficiaries."

The government announced before Christmas it would provide ample time for consideration of the new bill. Details of changes planned will be available after the bill is given first reading shortly.

Opportunity at Two West Indies Fairs?

How interested are you in getting more business in the new Federation of the West Indies?

Interested enough to invest a little money in showing your product down there at two trade fairs?

The trade-conscious Conservative government is willing to foot a share of the cost.

This week, Trade Minister Gordon Churchill announced a canvas of companies to find the extent of such interest. Soundings began through the Canadian Manufacturers' Association and the Canadian Exporters' Association.

The proposal:

—The fairs be held in Port-of-Spain, Trinidad and Kingston, Jamaica.

—Both would be considered as one project, held in early 1959 by which time the Federation should be on its administrative feet—perhaps strong enough in its dollar position to relax import restrictions on Canadian goods.

—Organization would be by the Canadian Government Exhibition Commission, since no established trade fair exists, along lines of the recently-discontinued Canadian International Trade Fair at Toronto.

Ottawa Plans New Look At Unemployment Act

OTTAWA (Staff)—The Conservative government — ready for an election any time from March on—will ride out this winter's seasonal unemployment on steps already taken to ease the situation.

But it intends to have a complete review of the Unemployment Insurance Act at the next session of Parliament.

It will decide then whether present benefit payments to the unemployed to $30 per week (not counting $13 odd-job money) are high enough and whether they cover enough of the labor force for long enough.

In 1957, unemployment aid was helped by:

- **Extension of the seasonal benefit** period for workers (a) whose regular benefits had run out or (b) who hadn't worked even long enough to qualify for them. The period is now Dec. 1-May 15.
- **Inclusion (by the former Liberal government)** of up to 30,000 fishermen for the first time and (by the Conservatives) of up to 12,000 more married women.
- **Legislation to enable** federal sharing with the provinces of all local relief costs for the unemployed.

And employment was helped by:

- **A $300 million boost for housing,** which was being built only slowly last winter, in the form of direct federal mortgage money lending.
- **A multi-million dollar speed-up** in federal public works projects. Some of them, originally planned for 1958 or early '59 will be started soon.
- **An intensified publicity campaign** to encourage organizations and individuals to have the jobs normally left until the spring done this winter.

A New Look

Decision to let present plans take care of the situation follow a new government look at the outlook.

Labor Minister Michael Starr and cabinet colleagues this week were studying the latest and only available figures on unemployment: The national employment service's weekly reports on Canadians registered for jobs.

These figures are published monthly but given to cabinet members weekly.

They are more up-to-date, therefore, than those of the Dominion Bureau of Statistics labor force survey conducted monthly and issued one month afterward.

The trouble is, the NES total of job applicants includes those who:

- Already have jobs but want better ones.
- Have got new jobs but not told the NES office so it can take their names off the list.
- Want jobs but would rather come off the list than take less pay than when they worked last.
- Really mean to get out of the labor force (i.e. newly married women) but stay registered in order to "get back our money."

Startling Increase

First look at the NES total showed the cabinet members startling increases in the first weeks of December, and a trend pointing to between 750,000 and 800,000 unplaced applicants in the winter peak.

Here are comparisons for comparable weeks:

	1957	1956
Nov. 28	435,000	246,000
Dec. 5	505,000	281,000
Dec. 12	570,000	314,000
Dec. 19	629,000	353,000

But 1957 changes have added about 135,000 to the Dec. '57 weeks.

—115,000 persons qualified a month earlier, Dec. 1, for seasonal benefit.

—15,000 fishermen qualify for the first time.

—5,000 more married women now qualify because of easier rules.

Thus the 629,000 of Dec. 19, 1957 would be only 494,000 when compared without the regulation changes to the 353,000 a year earlier.

But those not accustomed to working with the NES total—and those to whom it is preferable to accept the figure without alteration — forget about another and always-present "pad" in it: the total of those who are seeking better jobs, changing jobs, job-seekers not actively seeking any job. This "pad" is about 20%.

Rely on DBS

With all these deductions necessary to get an accurate picture of real unemployment, the experts prefer now to rely on the other federal figure on unemployment: the DBS' without-jobs-and-seeking-work total.

It is obtained—by techniques improved considerably in recent years—by a monthly survey of sample homes.

Questions are asked about the current work status of adults in the establishment.

This figure too, is subject to inevitable sampling error, probably on the high side, because the answers reflect opinions of those interviewed.

Those questioned may be housewives not actually in the labor force because an acceptable job has not turned up, workers temporarily laid-off but who consider themselves job-holders, job-holders about to retire from the labor market.

Latest jobless-and-seeking-work total (**FP**, Dec. 21) was 292,000 — 4.9% of the labor force. This compares with 2.3% a year ago, 2.9% in 1955 and 4.0% in 1954.

The next total will be available in about two weeks.

The peaks of NES registrations in past years were 597,500 in March, 1957; 535,000 in March, 1956; 643,000 in February, 1955; and 587,000 in March, 1954.

Because of the increase in the labor force, from about 5.3 million to about 5.9 million, (and an even greater increase in proportion in the industrial segment of the labor force), a peak of about 700,000 NES registrations this winter would be about the same as the previous high in February, 1955.

N.B. Hydro Plant Averts Mill Closings

From Our Own Correspondent

FREDERICTON — Completed mid-November, the first unit of New Brunswick Electric Power Commission's $30-million Beechwood hydro plant staved off a shutdown threat at two N. B. and one Maine pulp and paper mills during the Christmas season.

Beechwood's ability to supply 3,200,000 kwh to **Fraser Companies'** mills at Edmundston and Madawaska, Me., and **N. B. International Paper Co.** at Dalhousie prevented a threatened work stoppage for roughly 2,000 employees plus around a $150,000 payroll loss to the three communities for the week Dec. 23 to 29.

The shutdown threat followed a flood on the St. John River resulting in ice blocking the intake racks at Gatineau's Grand Falls hydro plant, regular suppliers of power to the mills, and forcing Gatineau to rake the racks by hand until clear.

Heavy rains and flood waters enabled the commission to supply a daily output of 2,500,000 kwh to its regular customers. Full capacity heads also enabled it to generate a peak load of 146,000 kw, the highest in the province-owned utility's history. This represents a 20% increase in peak demand over the same period a year ago.

With one unit "on line" at Beechwood, 48,000 hp is being poured into the commission's province-wide grid system. This represents 860,000 kwh or a third of the daily total used by the commission.

Millers Wait Ottawa Move

MONTREAL (Staff) — Canadian millers are watching closely for the first sign of a possible change of government policy on flour exports.

In face of growing U. S. subsidized competition, Canadian overseas sales have been dropping steadily.

In the year ended Aug. 31, 1957, Canadian flour exports totaled 14.6 million cwt., down from 17.4 million the year before.

Over a 10-year average before that, annual overseas shipments were 22.6 million cwt.

Now millers are really feeling the pinch from U. S. pressure.

"We are having to sell in traditional markets at cost price," H. Norman Davis president of **Ogilvie Flour Mills** told **FP** this week.

"It is the only way we can keep our products in those areas. If we get out now we may not be able to get back in later."

If a Canadian firm names a price, say in Britain — millers complain — it is not unusual for a U. S. mill to quote 50c per cwt. lower. The difference is made up by the U. S. Treasury under surplus disposal program.

The Conservative government was approached last fall by the milling industry. So far nothing has been done other than a meeting with the U. S. government on the whole matter of surplus disposal — which produced no concrete results.

Recently there has been talk of a possible Canadian subsidy. This wins little support with most millers. "We can never compete in a subsidy war with the U. S. Treasury," Davis explains.

But there is a strong feeling that unless Ottawa acts soon Canada may lose the majority of its established flour markets abroad.

ANNOUNCING

Important appointments in Canadian Industry, Finance Business and Government.

Strippit Tool and Machine Ltd. (Brampton)—John R. Fitzpatrick, elected vice-president and general manager.

$25 Million N.B. Projects

From Our Own Correspondent

FREDERICTON—During the first 11 months of 1957 New Brunswick's dust-free highway mileage was boosted to 2,620 miles.

Highlighting the 900-mile-plus highway construction, bridge building and maintenance program costing about $25 million since Jan. 1, 1957, was the addition of 22 miles of new paving and seal-coating to the province's 2,598 miles of hard-surfaced roads.

Since the first of last year paving, recapping, surfacing, seal-coating and grading and gravelling of 911 miles of main trunk and secondary highways has been carried out under contracts, county projects and by Public Works Department crews.

New highway and bridge construction cost $14,783,446; road, bridge and ferry maintenance $6,296,052; road machinery and equipment $733,030; and snow control since the start of '57 another $3,025,069.

A breakdown of the province's highway mileage at the end of March 1957 shows the following: 2,598 miles of hard-surface and 10,425 of gravelled roads.

Bond Yield Average Falls

Average yield on 40 bonds as compiled by McLeod, Young, Weir & Co., on basis of prices at Jan. 2, 1958, was 4.95% as compared to previous month's average of 5.07%.

Provincial, municipal, public utility and industrial groups declined .14%, .09%, .10%, and .15% respectively. No substitutions were made during December.

Here is the yield by various groups:

	Jan. 2 1958	Dec. 2 1957	Jul. 2 1957	Dec. 31 1956
10 Provincials..	4.60%	4.74%	5.11%	5.03%
10 Municipals	5.12	5.21	5.61	5.45
10 Pub. Util. ...	5.03	5.13	5.21	4.98
10 Industrials ..	5.04	5.19	5.37	5.22
40 Bd. Yld. Av.	4.95	5.07	5.32	5.17
Av. Maturity	13 yrs. 5 mos.	13 yrs. 6 mos.	13 yrs. 11 mos.	11 yrs. 7mos.
Govt. of Canada 3¼% June 1, 1974/76	3.79%	3.82%	4.27%	3.90%

New Highs and Lows

During the week ended Jan. 3, four new highs and 18 new lows were recorded among the general stocks on Canadian stock exchanges. In the mining group there were three new highs and 72 new lows. In western oils there were 46 new lows and no new highs.

Safety Hats

On sale: liners for safety hats. Claimed to afford protection against all types of winter weather. Are designed for wear with any type of safety hat. Available in various materials.

* * *

Long Life Dictaphone

Now available: an office dictating machine with an all-transistor amplifier. Since transistors last indefinitely, they virtually eliminate costly work interruptions for repairs, maker says. Gives instantaneous response in contrast to delay encountered on old style machines while vacuum tubes warmed up. Also, power consumption is said to be only a fraction of that required for tube amplifiers.

* * *

Vegetable Cutter

For restaurants: a high speed electric vegetable cutter. Handles 52 lb. potatoes per minute, maker states. Can also be used for other vegetables. Cutting die available in three different sized square cuts to give ⅜ in., ½ in., or ⅝ in. vegetables. Ideal for preparation of French fries.

* * *

Skirting Board

For modern buildings or conversion of older ones: hollow skirting board which holds wires and piping. Eliminates need to rip up flooring, brickwork and plaster. The shaped plywood is very light and easy to manipulate, U. K. manufacturer, says.

* * *

Farm Ditcher

In production: a farm drainage ditcher which features a live hydraulic wheel hoist and a three-speed hydraulic conveyor as standard equipment. Available with optional steering-assist brakes which allow it to be turned in own radius. Pedal-operated brakes eliminate difficult manoeuvring usually required to move ditchers out from tight squeezes at fence lines.

* * *

Bantam Motorbike

From the U. K.: a light weight motorbike. The two-stroke motor employs a special technique for getting maximum charge into combustion chamber. Machine has been designed to strike a balance between economy and performance. Has a 172 cc engine. The bore and stroke is 59 mm by 63 mm and compression ratio 8½:1.

New Literature

Walter Kidde & Co., Main St., Belleville, 9, N.J., announce a 12-page catalogue (P-40) which describes and illustrates full range of fire extinguishers. Equipment covered is largely for commercial, institutional, or industrial fire hazard applications.

Shell Oil Has Three Programs Of College Aid

Shell Oil Co. of Canada is giving three types of aid to university education:

—Eight one-year fellowships in science or engineering tenable in Canada; each $1,800 fellowship carries an additional $500 unrestricted grant-in-aid to the university to help cover administration expenses.

—The company awarded "Shell Merit Fellowships" to six secondary school science and mathematics teachers. The winners attended summer leadership seminars at Cornell and Stanford Universities.

—The company made grants of $5,000 each to Queen's, Toronto, and Saskatchewan Universities to help them expand their facilities for training geologists.

In addition, **Shell Petroleum Co.,** London, has awarded two $2,000 fellowships to Canadians, tenable at English universities. The London concern is also making similar awards in other Commonwealth countries.

ANNOUNCEMENT

NORTON COMPANY APPOINTMENTS

W. A. McCUNE

T. O. CHARLES

ROBERT E. YULE

WILLIAM D. BRAUN

The Norton Company of Canada Limited announces that W. A. McCune, formerly General Sales Manager, with headquarters at the head office in Hamilton, is returning to Norton Company, Worcester, Mass., to the position of Manager—Field Sales.

T. O. Charles has been appointed General Sales Manager with headquarters in Hamilton, Ontario. Mr. Charles was formerly Montreal District Manager.

Robert E. Yule has been appointed Montreal District Manager, with offices at 4920 Western Ave., Montreal, P.Q. Mr. Yule was formerly District Representative resident in Peterborough, Ontario.

William D. Braun has been appointed District Representative Eastern and Northern Ontario, with headquarters in Peterborough. Mr. Braun was formerly District Representative in Toronto.

Office Salaries Increase; Sarnia Tops in Pay Rates

Canadian clerical workers now average $51 weekly — $1 more than in 1956.

Source: A report by the National Office Management Association stemming from a survey of some 650 Canadian companies employing 23,100 clerical workers.

Highest paid clerical office job, says NOMA, is that of senior bookkeeper, now paying an average of $79 a week. This is an increase of $4 a week from 1956 when it was also the top paying job.

Increases of $3 a week were given to:

Private secretaries (now $66); payroll clerks ($57); senior typists ($48); duplicating machine operators ($47), general junior clerks ($44), file clerks ($40).

Receiving an average $2 more a week are:

Sales order clerks ($62), junior bookkeepers ($61), tabulating machine operators ($61), transcribing machine operators ($46), mail clerks ($40), messengers ($40).

Up $1 a week on the average are:

Stenographic secretaries ($56), general senior clerks ($56), senior stenographers ($52), calculating machine operators ($48), junior stenographers ($45), telephone operators ($45), addressing machine operators ($42), junior typists ($40).

No Change

With no change in average salary since 1956 are key punch operators (still $48) and bookkeeping machine operators ($46).

Some rates vary from city to city. Sarnia, Ont., pays tops to senior and junior bookkeepers and private secretaries, $98, $79 and $78 respectively.

Here are some other top rates:

Transcribing machine operator, $61 in Niagara and calculating machine operator, $58, same city; senior stenographer, $58 in Calgary and telephone operator, $50 in Calgary, Regina and Sarnia.

Managed Investment: The 13-Year Record

Figures are Dec. 15 market values 1944-57

How Compton, MacNab Tripled Cash in 13 Years

Building a sound investment program requires careful management through the good times and bad.

To illustrate the techniques involved in the professional operation of a private investment portfolio, **FP** back in 1944 asked two experienced and independent investment men to each undertake the management of a hypothetical investment account, both valued at $10,000.

Thus began the Compton and MacNab accounts, which today have market values roughly three times their original size.

Because an investment program must be tailored to the needs and circumstances of a particular individual, at the time of their creation, both Compton and MacNab were assigned definite and individual personalities.

Compton's investment aims were divided almost equally between capital gain and income.

What MacNab wanted was maximum income consistent with safety.

Since the funds were started 13 years ago, the managers have made many changes.

Both have altered their policies to meet shifting economic conditions while keeping in mind the individual needs of their clients.

The tables on p. 34 show how the two accounts have progressed in the past year, and the substantial changes that have taken place since they were first set up in 1944.

At one time, MacNab had quite a lead on Compton, but by the end of 1956 both accounts had market values exceeding $35,000.

At the close of 1957, however, they both reflected to a varying degree the general market decline begun last summer with MacNab further ahead again.

The Compton account showed a decline in market value of $7,459 or about 21% over the year, while MacNab's portfolio depreciated by only $4,569 or 12.9%.

In the matter of income, Compton's indicated return is slightly **below the December 1956 level of $1,543 a year, but MacNab's** has increased 6.3% or $96 above the expected annual income of $1,530 a year ago.

Compton's manager, who in 1955 cut the number of stocks in his portfolio from 15 to 10, added four new companies to the account in 1957 through purchases of **Algoma Steel, Asbestos Corp., Canadian Pacific Railway,** and **Gypsum, Lime & Alabastine. Powell River** was dropped, leaving 13 stocks in the account at the end of the year.

MacNab, with 21 securities in his portfolio, has maintained his wider range. He still includes bonds and preferreds, but in the past year has reduced their number from four to two.

Compton made large reductions in his holdings of mining and base metal stocks during 1957, while the number of shares MacNab owned in this group was slightly increased.

Compton's Manager Says...

The year 1957 has been a discouraging one for investors on this continent—worse for Canadians than for Americans.

From mid-December 1956 to mid-December 1957, the Dominion Bureau of Statistics Investors' Index of Canadian stock prices fell by about 20%. During the same interval the Dow Jones Average of the New York market declined by only 11.8%.

The value of Compton's securities fell by about the same proportion as the average of Canadian stock prices.

But Compton was not inactive during the year. He changed radically the composition of his account.

One year ago, 51.9% of his total market value was invested in 100 shares each of two base metal mining companies—**Hudson Bay Mining** and **International Nickel.**

In April he sold half of this investment, and in July he sold an additional 15 shares of International Nickel.

Compton also reduced the proportion of the fund held in newsprint stocks from 13.5% to 7%, by selling all of his shares of **Powell River** in April.

He added the shares of four new companies to the account **—Algoma Steel, Asbestos Corp., Canadian Pacific Railway,** and **Gypsum Lime & Alabastine.**

Thus after the elimination of Powell River, the number of companies represented in his portfolio rose from 10 to 13.

(For detailed list of the year's transactions, see table, p. 34.)

Thirteen years ago, in December 1944, Compton's account began with an investment of $10,000 and a prospective rate of annual income of $394.

His market value now, even after the decline of the past year, is almost three times that original sum.

In a direct comparison, the DBS Investors' Index now stands at 2½ times its level in December 1944.

Compton is receiving dividend income now at the rate of $1,535 per annum, a little less than four times his initial rate of income 13 years ago.

From this he withdraws $1,000 each year for his own use, plus $160 to cover management fees. The residue he re-invests.

At this time last year, his annual rate of income stood at $1,543. This is the first year Compton's income has declined, even so slightly.

Compton's annual rate of income increased by $21.75 during the month ended Dec. 15, a small Christmas present from the directors of **Asbestos Corp.** and **Steel Co. of Canada.**

He has made his customary quarterly withdrawal of $250 for his own use, plus $40 to cover management fees, so that his cash balance now stands at $2.53.

No one can foretell what will be the movement of the stock market during 1958. On the one hand many investors seem struck with fear by the recession (so far quite mild in a few specific industries), which we are now experiencing.

Furthermore, we must expect a great deal of discouraging and disconcerting news about international affairs, during the next 12 months.

On the other hand, interest rates on this continent have begun to ease; and the premium on the Canadian dollar has fallen sharply, which will encourage our export industries.

It seems probable, moreover, that expenditures by the United States for armaments will have to be increased by much more than the $2 billion so far discussed officially in Washington.

While the stock market may be washed about by the conflicting currents of hope and fear, eventually investors will realize that the growth of our economy has barely paused, and that its upward thrust will continue.

Then stock prices will rise again.

MacNab's Manager Says...

A year end summary of the MacNab account as at Dec. 13, 1957, shows a total valuation of $30,856 compared with $35,425 on Dec. 17, 1956, and $35,351 on the same date in 1955.

The Toronto Stock Exchange industrial averages in these years were as follows:

Dec. 13, 1957: .... 404.29.
Dec. 17, 1956: .... 460.79.
Dec. 16, 1955: .... 433.52.

During the year under review the TSE industrial average declined 56.5 points, or about 12.3% compared with a 12.9% decline in your account.

The stocks which have shown the most substantial decline in value are the pulp and paper and base metal groups.

The groups which performed relatively the best marketwise were public utilities, banks, brewing and distilling.

Investment in fixed income securities account for 12.7% of the portfolio at the end of the year, slightly lower than the 13.5% held in this type of securities last year.

During the year income has increased from $1,530 estimated annually to $1,626, a gain of 6.3%.

Current yield on the year-end valuation is 5.27% compared with a yield of 4.32% a year ago.

In retrospect, it would appear to have been more profitable to have stayed out of the market altogether during 1957. However, the account is well diversified and will no doubt show a substantial improvement marketwise in 1958 as and when the volume of business is improved.

I can see no substantial improvement until the fall of 1958 or spring of 1959.

The recent decline in interest rates reflects a leveling out in the boom and will tend to create a better climate for long-term borrowing for public works by national, provincial and municipal governments.

I can see a further improvement in bond prices during the year and anticipate that the account's annual income will be maintained or even increased in line with the original objective of maximum income consistent with safety when I assumed management of the account on Dec. 15, 1944, with a capital of $10,000.

Your Consumer Market: Its Changes, Patterns

A look at today's strong consumer market and its future trends through the eyes of marketing men

Speakers at last week's seminar of the Toronto Chapter of the American Marketing Association painted an optimistic but challenging picture of the Canadian market in the years ahead.

They drew on the lessons of the past, the problems of the present and the demands of the future.

Some of the points they stressed:

- **Prewar the suburbs** were the habitat of the well-to-do; today 30% of families with incomes over $4,000 live there.
- **The typical family** with two children is yielding place to that with three and even four children.
- **The department store** will stage a handsome comeback.
- **The single most important factor** in the location of food stores is ease of access.
- **Most people have the things they need,** now it is largely a matter of replacement.
- **In the years ahead** the U. S. economy will be increasingly affected by that of Canada.

Suburbs show the market changes

The radical changes which have swept the postwar North American consumer distribution field amount to a virtual revolution.

But this revolution has gone largely unheralded because most people have been too busy participating in it, said Edgar Gunther, **Fortune Magazine's** director of research.

For instance, the old stereotype of the average family with one boy and one girl is being replaced in advertisements with three and sometimes four children.

Years ago, many manufacturers couldn't afford to mass-produce quality products because the market was too small; today they make standard bare shells and provide the variations later.

The best place to see the change is in the suburbs.

Before the war they were the habitat mainly of the wealthy; today 30% of families with incomes over $4,000 live there.

Their higher birth rate is one of the principal factors behind the postwar population increase.

What is more, the birth of the third or fourth child produces shifts in spending patterns — a larger house, more appliances, etc., usually financed by consumer credit.

Nothing exemplifies the new consumer market as well as the auto market.

People want convenience, and they want attractiveness.

The result is it's getting harder and harder to tell a Cadillac from a Chevrolet, because the latter has been upgraded in looks and variety of optional equipment.

Another indication of the changed character of the luxury market is the rise of the packaged vacation.

With manufacturers seeking universal distribution of their mass media promoter lines, it will be increasingly difficult to distinguish between a supermarket, a department store, a discount store, a drugstore and a variety store.

Tomorrow's housewife will drive to the one-stop shop where she can get all her household supplies.

The discount house as we know it today—a retailer operating a cash-and-carry, low-markup, high-volume store — will gradually disappear.

Tomorrow's discount house will not only have to battle supermarkets but also the department stores which are also pushing into the suburbs where the buying power is concentrated.

The department store will stage a handsome comeback.

Supermarkets hinge on ease of access

In the old days when customers moved away from a grocery store the owner knew they were moving away because they told him.

But in the modern supermarket there can be no such communication between customers and top management, explained Harry Suffrin, director research and organization at **Steinberg's Ltd.,** Montreal.

Location is a key factor for today's supermarket.

While business may not suffer too much if it has a poor manager in a good location, even the best manager cannot overcome the handicaps of a poor location.

Mortgage commitments generally run for 20 years.

If management makes a mistake here, it has 20 long years in which it has to face the consequences.

Yet very few major chains have given this location problem the time and research funds it requires.

It is pathetic that many shopping centres—each representing a multimillion-dollar investment—have gone ahead without proper research as to their economic feasibility.

Research studies have shown that the single most important factor in the location of a food store is ease of access.

In this age of consumerism, ease of access must be basic to our way of thinking.

"People want to be sold, shown . . ."

Today we are in what is probably the strongest buyers' market since World War II.

People want to be sold. They want to be shown.

They have most of the things they need. Now it's a replacement proposition with few exceptions, contended Paul Dixon, vice-president, marketing, **Seabreeze Manufacturing.**

Look at the auto industry.

Despite all we see and hear about the wonderful features of the new cars, the only way we will really know how improved they are is to drive one.

How long is it since a dealer salesman has called you either on the telephone or at your home?

It would be amazing if this has happened to many people not in the last three months but within the last three years.

It is almost embarrassing to enter a car dealer's place, because invariably one has to go up to a salesman and interest him in talking.

If you don't look the type who has the money or absolutely ready to buy, he shrugs his shoulders and turns away.

Why they buy, and how many?

What is true of profits and losses is also true of marketing research.

It is not enough to know that "some people do this" or that "some people are motivated by that."

We have got to know how many people do this or that.

This is the foundation of marketing research. But it is only the beginning, stated Irvin Penner, vice-president **A. J. Wood & Co.,** Philadelphia.

We have to know "why" people behave as they do.

We must know what motivates them if we are to make sound decisions designed to change their behavior.

In quantification, you stand outside the consumer and count him; in motivation, you get inside the consumer and find out what makes him go.

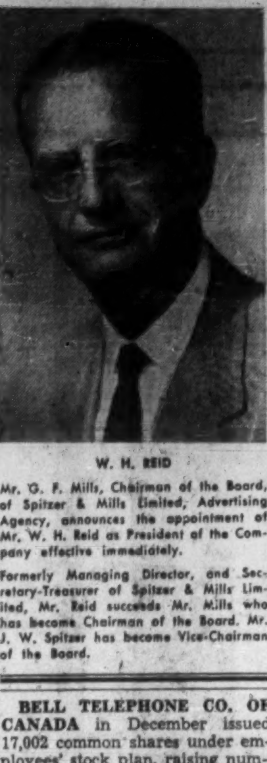
Then we must combine these two elementary data into a true unity of statistical and psychological methods.

This is a middle ground between nose counting at one extreme and psychiatry at the other.

However, it is a middle ground which is firm, theoretically and practically.

ANNOUNCEMENT

SPITZER & MILLS LIMITED



W. H. REID

Mr. G. F. Mills, Chairman of the Board, of Spitzer & Mills Limited, Advertising Agency, announces the appointment of Mr. W. H. Reid as President of the Company effective immediately.

Formerly Managing Director, and Secretary-Treasurer of Spitzer & Mills Limited, Mr. Reid succeeds Mr. Mills who has become Chairman of the Board. Mr. J. W. Spitzer has become Vice-Chairman of the Board.

BELL TELEPHONE CO. OF CANADA in December issued 17,002 common shares under employees' stock plan, raising number outstanding to 17,983,980.

The Movies

Art or Industry?

THE MOVIES by Richard Griffith and Arthur Mayer; Musson Book Co., Toronto; 442 pp.; $15.

THE LIVELIEST ART by Arthur Knight; Brett-Macmillan Ltd., Toronto; 383 pp.; $7.50.

The influence of the movies on twentieth-century man would be hard to exaggerate. Nothing can match the effect that Hollywood has had in shaping mass standards of culture, taste, love, marriage, feminine beauty, heroism—even interior decorating.

In these two histories of movie-making, the authors have surveyed their influential subject lovingly and intelligently. Both will revive happy memories for you if you are among the millions who have found pleasure in the transient masterpieces of the screen.

While Arthur Knight's book is subtitled "A Panoramic History of the Movies," that description would apply more fittingly to the much more comprehensive book by Richard Griffith and Arthur Mayer.

Mr. Griffith (curator of films for New York's Museum of Modern Art) and Mr. Mayer have turned their expert attention to every phase of the movies, from Edison's day to 1957.

Together, they have filled 442 big (9 by 12¼ in.) pages with 1,000 nostalgic photographs of great historic interest, and an always interesting and imaginative text.

Mr. Knight was a predecessor of Mr. Griffith as museum film curator, and is a discerning critic. His book, The Liveliest Art, does not attempt to survey the entire history of movies—as the other book does so brilliantly—but instead it studies the film as an art form.

To Mr. Knight, the picture is the creation of its director; the star's role is secondary. With keen perception, he outlines the techniques of the great directors of the past 60 years as demonstrated in their memorable pictures. He makes a strong case for the movies as the liveliest of the arts.

These two histories — one comprehensive and told mainly in pictures, the other specialized and sparingly illustrated — will heighten the intelligent moviegoer's appreciation of good pictures. They will heighten his yearning, too, that movies might be enjoyed in surroundings as agreeable as those of other art forms, rather than amid the murmur of conversation, the popcorn munching and the coming and going that take place constantly in movie houses.

Books for Businessmen

He Brought 'Improvement' To Albertans

WE HAVE WITH US TONIGHT, E. A. Corbett; Ryerson Press, Toronto; 222 pp.; $4.

"Ned" Corbett, as he is known to friends across the country, was on the staff of the University of Alberta (1920-36) and then (1936-51) director of the Canadian Association for Adult Education. This lively book, a real contribution to Canadiana, is an account of his experiences in these two jobs.

Its title refers to the fact that Dr. Corbett, in both spheres of action, was a frequent speaker at meetings of earnest seekers after light and learning.

At Edmonton he was attached to the university's extension department whose job was to carry knowledge, and entertainment as well, to Alberta people not likely to enjoy the benefits of higher education at first hand.

The provincial department of agriculture looked after the farmers' need for scientific and technical data. Extension lecturers offered talks varied enough to cover the theory of evolution, the life of Mark Twain, how to run a community centre and how to produce a Shakespeare play.

Corbett was constantly on the move, carrying lecture notes, films and projector by buggy or jalopy on the terrible roads that led to pioneer communities all over Alberta.

His story, written in an informal and humorous style, vividly conveys the atmosphere of the early West (early from the 1957 vantage point, anyhow) and is replete with good stories about the picturesque characters and life of the frontier.

Corbett had his share of unconsciously comic introducers and thankers. One chairman said: "Almighty God, who alone can perform mighty works, inspire the speaker of the evening."

Halifax Tells His Own Story, Churchill's Role Assessed

FULNESS OF DAYS by the Earl of Halifax; Wm. Collins Sons, Toronto; 319 pp.; $5.

This delightful book is quite unlike any of the autobiographical "histories" which statesmen and near-statemen have poured out since the war. Lord Halifax is revealed as a much more warmhearted person than the public could see during the critical years when he was Viceroy of India, then Chamberlain's foreign secretary, and Churchill's Ambassador to Washington. It is an enchanting surprise to discover the highly civilized, unassuming, gently humorous character which these reminiscences portray.

Informing the whole book is the background of English country-house life in the early years of this century — a way of life which now belongs to history. Remote as it now seems, it carried its own serenity and purpose and dedication.

Neither the pace nor the tone of this writing change as Lord Halifax moves to India for his crucial conferences with Ghandi and the first steps toward Indian independence.

Then on to Chamberlain (vividly sketched), Munich and the war. Lord Halifax reaffirms, without passion or rancor, his conviction that the Munich settlement was right; but he supported Churchill's appointment as Prime Minister in 1940, and the occasional comments on Churchill's later doings and sayings are always acute and revealing.

Not least of the surprises is the warmth of appreciative affection with which Lord Halifax writes about the U.S. The Americans captivated him, from Franklin Roosevelt (who could captivate anyone if he tried) right through to the obscure people who took him night-hunting in Kentucky or attended wartime meetings.

The second-last chapter deals with the weighty wartime dealings between Britain and the U.S.; and the next turns with equal poise to a plague of rabbits infesting the Yorkshire estate to which he returned. It describes with relish how a band of poachers was employed to destroy them.

This is the pleasant, easy-going way the book proceeds. It's excellent reading for a quiet evening, and it's apt to leave you with a slightly nostalgic regret that our statesmen don't come in such a civilized mold nowadays.

WINSTON CHURCHILL AND THE SECOND FRONT by Trumbull Higgins: Oxford University Press, Toronto; 281 pp.; $6.50.

The scope of this book is nothing less than a detailed analysis of British and U. S. military strategy between 1940 and 1943. It is a tremendous undertaking, embracing every aspect, religious as well as political, of the policies of the war leaders on both sides.

Churchill emerges as a man inclined to opportunist strategy of the "colonial" type. There are many other challenging conclusions.

The author's argument is supported by a vast bibliography, painstakingly indexed.

How Fur Traders' Empire Opened Half a Continent

THE NORTH WEST COMPANY by Marjorie Wilkins Campbell; Macmillan Co. of Canada, Toronto; 295 pp.; $5.

The fur trade, founded on an 18th century men's fashion for beaver hats, was Canada's commercial mainstay in 1779 when Simon MacTavish, the McGillivrays, Simon Fraser and other formidable Montreal Scotsmen launched the North West Company with French-Canadian partners.

They were bold, imaginative men with a touch of ruthlessness. By canoe and portage their agents pushed the fur trade west to the Pacific and north to the Arctic.

They were, in effect, rulers as well as traders. They accumulated large fortunes and, at the height of their success, virtually governed what is now Canada except for the Maritime Provinces.

But they never had a charter and were debarred from the Hudson Bay route. For lack of these advantages, and because they short-sightedly fought the settlement of Manitoba, the Nor' Westers came to grief. They avoided formal bankruptcy, but not personal ruin and a host of lawsuits, by amalgamation with their chartered rival, the Hudson's Bay Company, in 1821.

The characters are life-size in Mrs. Campbell's book and the drama is narrated with practised skill.

FP Writer's Book Tells How U. K. Led in Atom Research

ATOM HARVEST by Leonard Bertin; British Book Service, Toronto; 253 pp.; $4.25.

(The following review of FP Science Editor Leonard Bertin's book, Atom Harvest, is reprinted from The New York Times Book Review.)

By JONATHAN N. LEONARD

It is sometimes a shock to read another nation's version of history. In British books, for instance, not all the leaders of the American War of Independence are pure-hearted patriots. In Indian books the Sepoy revolt of 1857 was not a vile mutiny but a brave, unsuccessful struggle against a foreign oppressor.

In "Atom Harvest," written by British science reporter Leonard Bertin, the British are shown as playing a shockingly important part in the wartime atom-bomb project, which most Americans have come to believe was a largely American enterprise.

Mr. Bertin is right, of course. Nuclear physics was born in Europe, Americans making very few of the great pre-war discoveries. Europeans were the first to realize that energy might be extracted from uranium. In 1939 a group of French scientists actually applied for patents on two different nuclear reactors. They were never built, but their principles were correct.

The British were the greatest experts. Before the United States decided to attempt an atom bomb, Mr. Bertin says that British scientists figured out how to make plutonium in a nuclear reactor and how to separate fissionable U-235 from inert natural uranium.

They also calculated with accuracy how much fissionable material would be needed to make a bomb. Only when Britain came under heavy Nazi attack did British scientists take their skill and knowledge to America.

The author fills the first third of his book with the bitter story of how British-American atomic collaboration broke down after the war, leaving Britain with no bombs of its own, and no plant or know-how to build them. Then he tells about Britain's remarkably quick, economical and successful program to acquire without American help both nuclear weapons and effective power reactors. He writes well, and is unhampered by official secrecy.

Mr. Bertin does not pretend that nuclear energy is an unmixed blessing for mankind. He thinks that the manufacture of hydrogen super-bombs, each capable of obliterating the world's biggest city, is altogether too easy.

"Experts with whom I have spoken," he says, "tell me that they see no reason why improved thermonuclear weapons, easier and cheaper to make, such as are now being produced in the United States, Britain and Russia, should not in time be made and used equally successfully by the Swedes or any other country with comparable scientific and industrial resources."

A chilling thought indeed!

BOYS' BOOK OF SCIENTIFIC WONDERS AND INVENTIONS by Leonard Bertin; Ambassador Books, Toronto; 128 pp.; 130 illustrations; $2.25.

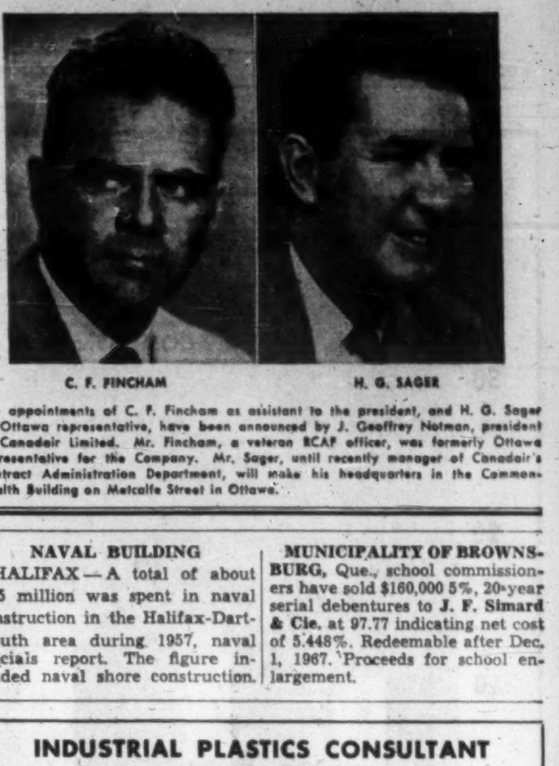
Rockets, satellites, solar energy, nuclear power stations, cosmic rays and man-made rain are among the host of topical subjects discussed in this highly readable work of popular science and engineering.

The book is aimed at the average teen-ager but the facts that it contains and the manner of telling them should assure a wide readership among parents as well.

The scope of the book is not confined to marvels of the future. It contains large and well-illustrated sections explaining the workings of more familiar steam engines and internal combustion engines, of conventional power stations, photo-electric "eyes," electric bells and television sets.

ANNOUNCEMENT

CANADAIR executive appointments



C. F. FINCHAM H. G. SAGER

The appointments of C. F. Fincham as assistant to the president, and H. G. Sager as Ottawa representative, have been announced by J. Geoffrey Notman, president of Canadair Limited. Mr. Fincham, a veteran RCAF officer, was formerly Ottawa representative for the Company. Mr. Sager, until recently manager of Canadair's Contract Administration Department, will make his headquarters in the Commonwealth Building on Metcalfe Street in Ottawa.

NAVAL BUILDING

HALIFAX — A total of about $4.5 million was spent in naval construction in the Halifax-Dartmouth area during 1957, naval officials report. The figure included naval shore construction.

MUNICIPALITY OF BROWNSBURG, Que., school commissioners have sold $160,000 5%, 20-year serial debentures to **J. F. Simard & Cie.** at 97.77 indicating net cost of 5.448%. Redeemable after Dec. 1, 1967. Proceeds for school enlargement.

Protection

...at your fingertips

Safety in the automobile is optional at no extra cost. No mechanical safety device can replace the protection of careful driving.

Last year, traffic accidents claimed the lives of more Canadians than ever before. Someone was injured every 8 minutes. A car was damaged every 48 seconds. Automobile insurance claims rose to more than $150,000,000.

One result of this is higher automobile insurance rates — because what is paid out in claims must be brought in by premiums. But even more important is the fact that you hold your life, and the lives of others, in your hands when you get behind the wheel of a car.

Safety pays dividends . . . saves lives, helps to lower your insurance costs. Be Careful.

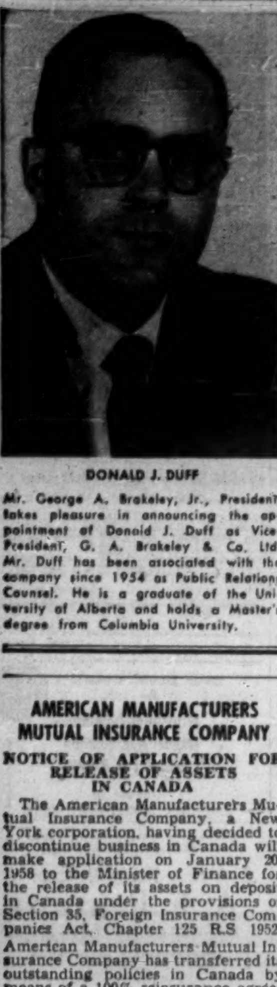
ANNOUNCEMENT



DONALD J. DUFF

Mr. George A. Brakeley, Jr., President, takes pleasure in announcing the appointment of Donald J. Duff as Vice-President, G. A. Brakeley & Co. Ltd. Mr. Duff has been associated with the company since 1954 as Public Relations Counsel. He is a graduate of the University of Alberta and holds a Master's degree from Columbia University.

AMERICAN MANUFACTURERS MUTUAL INSURANCE COMPANY

NOTICE OF APPLICATION FOR RELEASE OF ASSETS IN CANADA

The American Manufacturers Mutual Insurance Company, a New York corporation, having decided to discontinue business in Canada will make application on January 20, 1958 to the Minister of Finance for the release of its assets on deposit in Canada under the provisions of Section 35, Foreign Insurance Companies Act, Chapter 125 R.S 1952

American Manufacturers Mutual Insurance Company has transferred its outstanding policies in Canada by means of a 100% reinsurance agreement dated December 31, 1956 to Lumbermens Mutual Casualty Company, an Illinois corporation registered and authorized to do business in Canada.

American Manufacturers Mutual Insurance Company's policy-holders in Canada if opposed to said release of assets, are called upon to file their opposition with the Minister of Finance on or before January 20, 1958.

L. J. FLORA,
Resident Secretary.

Dated this 28th day of September, 1957.

Retail Industry More Attractive

Better working conditions are attracting young people...

By RICHARD OGDEN

Working conditions in Canada's retail trade are getting perceptibly better.

Retailing, which has found considerable trouble in attracting the right young people, is coming more into line with other businesses in regard to working hours, vacations, pension plans, etc.

These and other benefits can tip the scale decisively for the would-be retailer.

For better or worse, the young men and women embarking on careers today are particularly conscious of frill benefits.

For many years the retail trade has lagged behind others in the attractions it could offer the young and ambitious.

The general complaint: hours too long, pay too low, life too short.

Some idea of the general improvement can be gleaned from the Survey of Working Conditions in the Retail Trade, recently issued by the Canadian Retail Federation.

Five-Day Trend

A particularly significant trend is the increasing prevalence of the five-day week. The long weekend and its many do-it-yourself variations is becoming the rule.

Now 67.4% (55.9% year ago) of retail sales staff are on a five-day week. In office staff the figure has risen to 82.3% (73.5%) and other to 73.8% (60.8%).

With travel getting cheaper, vacations are a matter of more concern than formerly. Here again the retailer is getting a better break.

Now 87% (78.6%) of salesmen get two weeks after one year, 91.6% (75.3%) of office workers and 86.4% (70.6%) other.

And for the company man who has completed 10 years' service and will get three weeks holiday, the improvement is even sharper.

Now 24.4% (5.4%) of salesmen will get the three-week privilege, 41.1% (3.3%) office staff and 39.1% (4.4%) other.

Those who will get four weeks' holiday with pay after 25 years are 37.4% (30.7%) sales, 62.2% (43.9%) office, and 60.7% (40.7%) other.

Pension Plans

The proportion of employees in establishments reporting pension plans has risen to 88.7% (84.4%) for sales, 87.3% (85.5%) office, and 87.7% (82.4%) other.

The number of women covered by pensions has reached 88.7% (84.4%) sales, 87.3% (85.5%) office and 87.7% (82.4%).

The numbers participating in insurance and medical plans has also risen.

Figures for those on group life insurance show 81.1% (79.9%) sales, 88.3% (89.1%) office and 84.4% (84.4%) other.

For hospitalization: 86.7% (77.4%) sales, 87.3% (86.8%) office and 86.4% (84.4%) other.

RAIL SURVEY

From Our Own Correspondent

WINNIPEG — Forty engineers and surveyors will start this month to locate the permanent route of a 52-mile **Canadian National Railways** extension in northern Manitoba to be completed by 1960.

The new line estimated to cost about $9 million will be one of the major 1958 developments for northern Manitoba. Starting from Optic Lake, a few miles north of the junction of the Hudson Bay railway and the Lynn Lake spur line at Cranberry Portage, it will run northeast to Chisel Lake.

DRIVING RAIN and 100 mph gales are produced by this window test installation at Trenton, Ont.

100 mph Gales and Rain Blow from This Machine

A $30,000 test installation which can simulate gales up to 100 mph and driving rainstorms has been set up by **Williams & Williams (Eastern) Ltd.** at its Trenton, Ont., plant to check glass and aluminum curtain wall design for major buildings.

The company, manufacturers of Wallspan curtain wall, wanted a device which would simulate the severest weather conditions so that the setting of established standards for curtain wall could be started.

The answer was found in an installation which includes a Jacobs aircraft engine mounted on a stand and a tubular metal frame from which water is released while the engine is running.

The device has been used on a number of occasions and the tests have produced some interesting results.

It has been found, for example, that under very high wind pressure, faults show up which would never be noticed under normal conditions.

In one severe test, a pulsating movement on the glazing proved that the weather stripping, though it looked adequate, was unlikely to be satisfactory under the worst weather conditions.

Other tests have shown weaknesses in certain sealing compounds.

Panels designed for various major buildings including the Lord Simcoe Hotel, Toronto, and Uplands Air Terminal, Ottawa, were checked on the test installation before being approved for final use.

Recently, a complete bay, designed for the new $9 million federal MacKenzie Building on Adelaide Street, Toronto, for which **Shore & Moffat** are the architects, was put through its paces.

Williams & Williams are currently adding 30,000 sq. ft. of floor space to their plant to permit increased production.

Movies on Soup and Love To Capture Milady's Eye

New way to catch the eye of Mrs. Canada: Industrial films.

A plan worked out by **Crawley Films Ltd.** and **Dominion Stores** will make short feature films available free to women's clubs across Canada.

Subjects: Home management, mostly, at this stage, food preparation. However, films involving other household operations and materials are planned.

Crawley is making the films —12 to 20 min. in length, in color — for the manufacturer; Dominion Stores will act as distribution agent. Both manufacturer and distributor will be credited in the films.

Size of the audience: 1.3 million in some 12,000 clubs. Many are regarded as community leaders and pace setters.

Any bona fide club would be offered a selection of films at no charge. The club would merely apply to the nearest Dominion store.

In the contemplation stage by Crawley: A similar plan for men's clubs.

The present plan is to have seven films available in February at Dominion stores in Kingston, Sudbury and London, Ont. It's planned to expand "library" later and make it available at all Dominion stores across Canada.

Two films just completed by Crawley for the series are "Of Soup and Love" for **Thomas Lipton Ltd.**, and "New Wonders with Wieners" for **Visking Ltd.**

Many Barred From College By Chance

Pure chance bars many students of ability from Canadian colleges and universities.

This is inferred — but not stated — in the first published report of the Atkinson Study on Utilization of Student Resources.

Object of the study which will last several years: To find out what happens to able Canadian high school students and why. The study group is some 9,600 students enrolled in Grade 13 in Ontario schools in 1955-56.

Two conclusions of the first report are:

- **A student has a better chance** of attending university if he comes from a small family, if his father is employed in a professional or managerial occupation, and if he lives in a large Ontario city.
- **Conversely, the larger the family,** the lower the occupational level of the father and the farther the location of the home from a major city, the less his chances of attending university.

These conclusions suggest a third — that many able young persons don't attend university because of their circumstances.

Another conclusion of the report — an off-beat one:

Boys had a better chance of attending university if both parents were living than if either parent was dead.

Girls had a slightly better chance of attending if one parent was dead; if the mother were dead, the chance was greater than if the father were.

He Wouldn't Join, Wins Court Case Against Teamsters

From Our Own Correspondent

VANCOUVER—An interesting case being appealed:

Teamsters Union Local 213 is fighting its conviction on a civil charge of trying to force a small, private Vancouver trucking company to join the union.

On Dec. 2, 1957, Teamsters was fined $2,500 and ordered to pay Henry Therien, operator of **Safeway Trucking**, loss in wages and profits between September 24 and December 11, 1956, due to union interference with his work with **City Construction Co.**

Therien drove one of his own vehicles and hired drivers for three other self-owned trucks.

City Construction notified Therien it could not use the truck he drove himself because the union threatened to "placard" the company.

"The action of the union in attempting to force an employer-driver into the union was illegal and contrary to the Labor Relations Act," Justice J. V. Clyne said in Supreme Court.

"As an employer, Therien was prevented by law from joining a union and in seeking to deprive him of the right to drive his own truck, the union was endeavoring to prevent him from earning his own living."

THE NORTH RIVER INSURANCE COMPANY

NOTICE is hereby given that The North River Insurance Company has received from the Department of Insurance, Ottawa, Certificate of Registry authorizing it to transact in Canada the business of:

Explosion Insurance.

Boiler Insurance (excluding Machinery) in addition to the classes for which it is already registered.

Dated at Toronto, this 11th day of December, 1957.

W. G. CHAPMAN,
Resident Secretary.

Fulton Banister Forms New Firms

Fulton Banister Ltd., pipeline contracting firm, has formed two new associated companies—**Banister Helm Ltd.** and **Helm Equipment Ltd.**

Banister Helm Ltd. will take over the on-site operations of Banister construction in natural gas installation, early in 1958.

Fulton Banister will continue to handle the firm's cross-country transmission pipeline contracts.

The recent purchase of the U. S. interest of R. H. Fulton, former Fulton Banister partner, makes the Banister Helm operation one of the largest wholly-Canadian-owned groups in the country.

BETTER EDUCATION

Providing better education for bright students will be debated by a four-man panel at the Toronto Secondary School Teachers conference Jan. 24.

Panelists: Douglas Fisher, the CCF MP who defeated C. D. Howe at Port Arthur; Prof. F. E. L. Priestly, University of Toronto; Col. Kurt Swinton, president of **Thomas Edison Co.**; Mrs. Kent Barker, president, Toronto Home and School Council.

SHAWINIGAN WATER & POWER CO. Dec. 19 had 7,288,196 common shares outstanding.

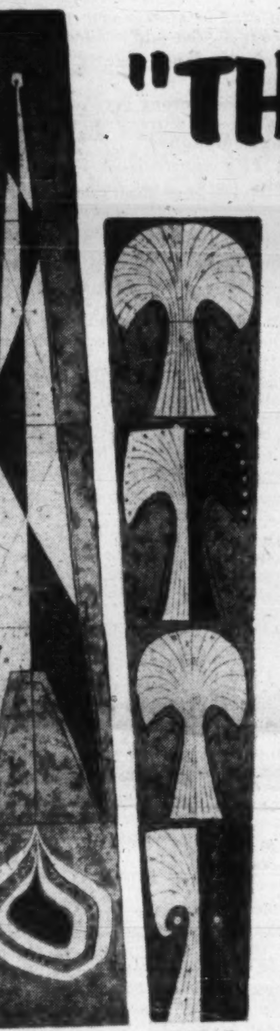
ANNOUNCEMENT

W. C. PITFIELD APPOINTMENTS

J. M. McAvity A. G. Muir

J. M. McAvity whose election as a director of W. C. Pitfield & Company, Limited is announced and who will be in charge of the Company's operations in the Province of British Columbia. Mr. McAvity has been manager of the Vancouver and Victoria offices of W. C. Pitfield & Company, Limited and Hugh Mackay & Company since 1952.

A. G. Muir whose appointment as manager of the Vancouver office of W. C. Pitfield & Company, Limited is announced. He joined the Vancouver office of W. C. Pitfield & Company, Limited in 1946 and was appointed assistant-manager, Vancouver Branch, in 1953.



"THE WALL"

purpose: to attract... direct... and sell

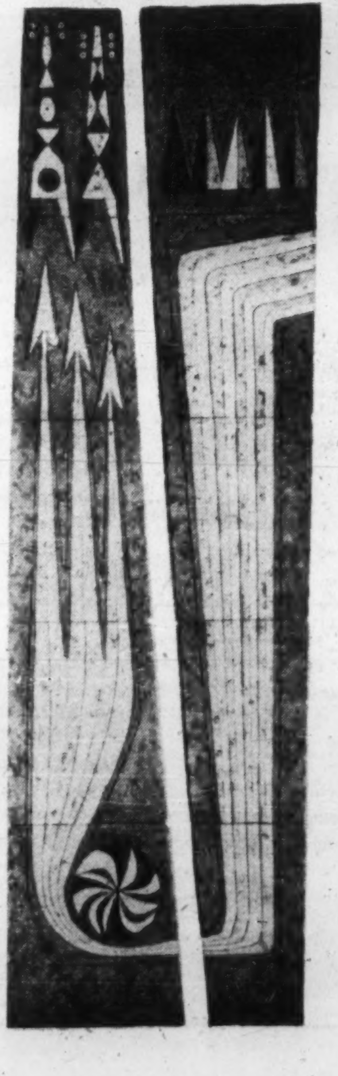
What an exciting challenge: design a "wonderful structure" — not quite a wall, but not exactly a fence, or a mural, or a screen, barrier or guide rail either. It had to be huge — one thousand, two hundred and fifty square feet in size! But it had to be portable, because it is to be the showpiece of the Canadian Pavilion at the 1958 World's Fair, in Brussels, Belgium. And most important, it had to speak all languages as it portrayed the character of the people, industry and vast natural resources of Canada to a world audience.

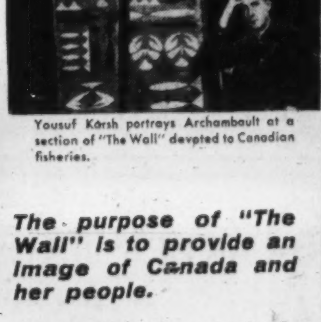
In the current issue of Maclean's, Canadian families will get their first view of "The Wall". They will see in detail this fascinating creative effort of the Montreal sculptor, Louis Archambault.

OIL WHEAT

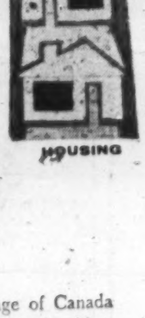
OIL derricks in a tapering column of five terra cotta tiles form an integral part of "The Wall" design.
Curvaceous WHEAT sheaves portray the Prairies.
This ten-tile arrangement tells the story of HYDRO-ELECTRIC POWER from river to power lines.
Picture-windowed bungalows depict Canada's mushrooming HOUSING industry.

HYDRO-ELECTRIC POWER





Yousuf Karsh portrays Archambault at a section of "The Wall" devoted to Canadian fisheries.



HOUSING

The purpose of "The Wall" is to provide an image of Canada and her people.

And that is precisely what Maclean's has been giving its readers and advertisers for over fifty years.

In 1957, Maclean's created its image of Canada with 1,098,400 words of fresh and original writing, supported by 1,547 photographs and illustrations (with one in every four in the beauty and realism of full color). Twelve multi-page full-color "albums" and six fact-packed national surveys swelled 962 pages of articles, fiction, editorial and departments into a composite image of Canada and her people.

Is it any wonder, then, that over two million Canadians turn to Maclean's as their family magazine in the home? And because this audience *does* respond so naturally to Maclean's, you can use the pages of this national magazine to create a positive "selling image" that will attract and direct these prospects to the products or services you sell.

NOT THE CHEAPEST WAY TO BUILD
BUT THE MOST ECONOMICAL

There are other types of building construction that cost less than a Butler, but no other building anywhere near the price offers you so many outstanding features for your money.

... like pre-engineering. When you sign the order, your Butler building is already designed to conform to uniform, provincial and municipal building codes. You avoid the cost and delay associated with custom engineering.

... like quality control. Butler building components are mass produced. This is the *only* economical way to insure uniform high quality, and means a weathertight building, less maintenance, longer life.

... like fast construction. A Butler goes up weeks ahead of ordinary construction. You're in business ... making money ... that much sooner.

... like post-free interiors. Butler load-bearing frames span widths to 120 feet. You have unrestricted freedom to plan layouts to your specific needs without interference from interior columns, load-bearing walls, or other obstructions. Made to order for light, movable walls.

... like surprising economy. Butler pre-engineering, mass production, fast erection and minimum maintenance keep not only initial costs, but long-run costs, surprisingly low in terms of the building's unique advantages and quality of construction.

Get the whole story on the Butler Building System—the lowest-cost way to build well. Consult your Butler Builder. He's listed in the Yellow Pages of your telephone directory under "Buildings" or "Steel Buildings."

Want to Start an Industry?

Fifth of a series of articles on the new trends that make the big step easier than you think . . .

By *CLIFFORD FOWKE*

Keeping Costs Down

It's easier than ever to start a new plant today—if you have a hot product idea and a good credit rating.

There are "package plans" aplenty to smooth out wrinkles for new enterprise.

This is the new trend among developers, designers, builders and suppliers — a trend aimed at boosting business and beating tight money.

This series by FP's construction industries editor tells how the plans work, how they can help you.

Long before the new plant owner takes over his premises, he will be studying a problem that could spell the difference between red and black in the books of his new enterprise.

It is the old question of maintenance costs — the largest single item of operating expenses in any process industry.

But here again, modern business is streamlining its approach so much that a telephone call could relieve the owner of his worries and probably save him substantial production dollars as well.

The answer is contract maintenance — a field that important construction engineering companies are developing fast as a complete service to large and small clients.

Presently the services available vary widely in the degree of responsibility assumed. They range from the labor broker who will provide men for specific jobs on request on an hourly basis to the company that will shoulder full responsibility for a supervisory fee with the owner charged for labor and material costs.

But the trend is quite definitely toward assuming full responsibility. The people providing the services are specialists in the field and they feel they can do a better job for the owner if they accept full responsibility, whether the end product is cement, fuel oil or any other one of thousands.

Multiplant Scheme

With the growing use of such services, comes the opportunity for smaller plants to share the advantages. Full responsibility for a major plant on a contract maintenance basis means that the contractor's labor position is more flexible.

When the men are not needed on one job, they can be switched to another.

It means that where a contractor is maintaining one major plant in an area, he can offer smaller plants in the same area similar service at an economic rate.

A pioneer in the contract maintenance field, **Catalytic Construction of Canada Ltd.**, has already developed a multiplant service in the Sarnia district. It has maintenance contracts with major plants in a variety of fields across Canada and expects to see the multiplant scheme operating in more centres shortly with Montreal and Toronto possibly as the next targets.

Catalytic's vice-president and general manager, George E. Temple, declares that contract maintenance is the most effective system for reducing maintenance costs.

He backs up his point with an interesting cost table, based on the operations of two plants owned by one company and producing the same commodity.

One of the plants is owner-maintained and the other is contract-maintained by Catalytic.

The contract-maintained plant has twice the production capacity of the other and started production two years later. It also pays out a considerably higher average wage than the other.

Costs Comparison

Says Temple: "The contract-maintained plant has consistently produced in excess of design capacity, 10% to 15% more than the owner-maintained plant.

During the first operating year of these two plants, the number of maintenance hours consumed per ton of material produced was .245 in the contract-maintained plant and .568 in the owner-maintained plant."

With figures extrapolated to conceal actual dollar costs, here is the total cost of maintenance per ton of product at each of the plants in comparative periods:

	Maintained By Owner	Catalytic
Feb.	5.20	3.11
March	5.00	2.51
April	5.49	2.28
May	4.75	2.09
June	4.43	2.02
July	4.07	2.00

Other major companies like **Brown & Root Ltd., Provincial Engineering Ltd.** and **Canadian Comstock Co.** are into the contract maintenance field. In some cases, they installed the plant equipment and carried on maintenance from there. In others, they have taken over maintenance responsibilities for older operations.

HOSPITAL EXPANSION

From Our Own Correspondent

FREDERICTON — A $1.2-million expansion to Soldiers Memorial Hospital at Campbellton is scheduled to get under way in late spring.

Tenders for a new four-story wing plus renovations to the existing premises are expected to be called around May 1.

Counting present facilities, the project will result in a modern hospital of 107 beds and 19 bassinets. The present building will ultimately be used as a rehabilitation centre.

POWER CORP. OF CANADA LTD. Dec. 20 had 619,855 common shares outstanding.

U.S. Prosperity Omen: Smaller Hole in Doughnut

Special Correspondence

WASHINGTON, D.C. — U.S. doughnut bakers and Commerce Secretary Sinclair Weeks are optimistic about 1958.

It's been officially disclosed that the doughnut bakers in 1958 are reducing by a quarter inch the hole in doughnuts. Traditionally, the hole has been widened during depression and narrowed during prosperity. So, the quarter inch reduction in doughnut holes in 1958 has been taken as an omen of a healthy 1958 economy.

Agreeing with this line and opposing the pessimism of most American economists, is Commerce Secretary Weeks. He says in 1958 business will have stiff competition "which, of course, is the priceless ingredient of our system."

Weeks says: "1957 was spurt then sag; 1958 looks like mild dip, then climb.

"The immediate economic situation may not be as rosy as we all want, but from where I sit the 12 month outlook is far better than nail-biting pessimists think. The shower isn't over yet, but the sun shows signs of breaking through the clouds."

For the coming 12 months, Weeks sees many of what he calls "plus factors." He says, "Among plus factors in evidence are stepped-up defense orders, history's greatest highway project moving faster from blueprint to construction stage, continued population growth and private spending, reflecting confidence."

Sales for You in China?

How and what to sell in this hard-cash market . . .

OTTAWA (Staff) — Worried about exports falling off?

You may be able to find a market in Communist China.

The first comprehensive review of Chinese market possibilities is now available here. It shows:

- **Good demand** for raw materials.
- **Not much chance** of selling capital or consumer goods.
- **Now is the time** to make your pitch for the business.
- **And you must pitch directly** to one or more of the 16 state trading corporations.
- **Canadian controls** are unlikely to interfere.
- **Hard currency** is no problem for China.

This guide to the China market is given by the Department of Trade and Commerce which has now digested the reports by Hong Kong Trade Commissioner C. M. Forsyth-Smith.

He visited the country for three weeks last November.

Some trade experts here caution against premature optimism, but agree volume of trade could be increased with a little effort.

Most saleable commodities are pulp and paper, wheat, fertilizers, aluminum, chemicals, plastic raw materials, cellophane, synthetic fibres and non-ferrous metals.

(Exports in many of these have dwindled recently.)

If you have any of these to offer, this is the recommended procedure:

1. If you aren't already sure, check with Export-Import Control Branch of Trade and Commerce here on the exportability of your product.

All Canadian exports to China are subject to federal control because China is on an Area Control List which covers Communist countries, Hong Kong and Macao.

Strategic items and goods in short domestic supply may not be shipped.

But permission to export other items is readily available.

2. Write directly to the most appropriate of the 16 Chinese state trading companies' head offices listed below.

The Chinese buy only through such companies, not through agents.

And proposals must include details on item specifications, prices and quantities available.

If possible, a sample should also be sent along in the first instance.

They are reported particularly ready to buy now.

The latest five-year plan is just now ending and the next is being considered for implementation probably in the spring.

And they will pay cash.

3. Send Forsyth-Smith (P.O. Box 126, Shanghai Banking Corp. Bldg., Hong Kong) extra copies of your letters for follow-up.

He may also know of branches of the Chinese company with a more immediate awareness of local need for your product.

Canadian sales were just $2.4 million in 1956 and purchases just $5.7 million and the 1957 totals will be on about the same order.

This is only a tiny share of China's estimated total trade of $900 million with non-Communist countries.

Canadian sales at present are mostly ammonium sulphate ($870,000 in the first nine months of 1957), and kraft wrapping paper ($300,000).

Here is a list of the 16 trading companies (all in Peking) and the commodities they are most interested in:

China National Import and Export Corp., Erh Li Kou, Outside Hai Chih Men. Import and Export: chemicals, pharmaceuticals, medical instruments, fertilizers, dyestuffs, pigments, rubber and rubber products, petroleum and petroleum products.

China National Cereals, Oils & Fats Export Corp., 57 Chu Shih Ta Chieh. Import and Export: cereals — rice, wheat, horse beans, broad beans, pulses; oil seeds — soyabeans, groundnut kernels, sesameseed, linseed, rapeseed, copra, etc.; oils — wood, groundnut, aniseed, cocoanut, etc.; salt.

China National Animal By-Products Export Corp., 4, Wangchia Hutung, East City. Import: wool, wooltops and living animals. Export: bristles, horsetails, fur, fur plates, skins, hides, feathers, down, casings, wool, hair carpets, brushes, leather and leather products, fur products, etc.

China National Tea Export Corp., 57, Li Shih Hutung, Tung Sze Pai-low. Export and Import: tea (black, green, scented, oolong, compressed), coffee and cocoa.

China National Native Produce Export Corp., 46 Hu Fang Chiao St. Import: flue-cured tobacco, jute, manila fibre, gunny cloth, gunny bags, pepper, materials for making handicrafts, tropical medicines. Export: bast fibre and its manufactures, tobacco and its manufactures, various kinds of native products, wood and timber, nuts, dried vegetables and subsidiary foodstuffs, arts and crafts, medicines, spices, essential oils.

China National Foodstuffs Export Corp., 38 Chiao Tze Hutung, Kwang An Men St. Import and Export: livestock and poultry, meat and meat products, animal oils and fats, various kinds of fresh and preserved fruits and vegetables, eggs and products, liquors and wines, sugar and confectionery, canned food, sundry food-products.

China National Sundries Export Corp., 32A Chiu Tiao Hutung, East City. Export and Import: raw cotton, cotton piece goods, cotton yarns, cotton manufactured goods, ramie and woolen goods (gunny bags excluded), glass and glassware, sundry goods for daily use, paper, stationery and educational supplies, musical instruments, iron nail, galvanized wire and other hardware sundries, household electrical supplies, sanitary wares, woodware and building materials.

China National Minerals Corp., 3, Pao Chan Sze St. Import: chrome ore, titanium concentrates, borax, cobalt oxide, mica and mica products, cement, etc. Export: coal and coke, cement, pig iron, iron ore, antimony, talc, pyrophyllite, magnesite, dolomite powder, bauxite, clay, bentonite, graphite, pyrolusite, realgar, orpiment, arsenic oxide, apatite, alum, gypsum, quartz, feldspar, porcelain, clay, white clay, garnet, yellow mineral colors, float stone, round pebbles, limestone, vermiculite, chrysotile, fluorspar, barite, etc.

China National Silk Corp., 29, Nan Chi Tze. Import: rayon yarns and other kinds of artificial fibres. Export: raw silk steam filature, douppion silk, tussah silk, spun silk yarn and silk tops, silk waste and tussah silk waste, pure and mixed silk piece goods, tussah silk pongees, Fuji silk, Canton gauze and silk gambiered, silk wears, kerchiefs, embroideries and other ready-made silk products.

China National Machinery Import Corp., Erh Li Kou, Outside Hsi Chih Men. Import and Export: machine tools, power machineries, mining and metallurgical machineries, electric machineries and appliances, air compressors, cranes, excavators, precision measuring tools, cutting tools, tools.

China National Transport Machinery Import Corp., Erh Li Kou, Outside Hsi Chih Men. Import and export: transport and agricultural machinery (motor vehicles, trucks and parts), locomotives, aeroplanes and parts, ships, printing machines, papermaking machinery; pharmaceutical, food, architectural, chemical, textile and other light machinery.

China National Instruments Import Corp., Erh Li Kou, Outside Hsi Chih Men. Import and Export: various instruments, telecommunication supplies, photographic supplies, calculating machines, typewriters, etc.

China National Metals Import Corp., Erh Li Kou, Outside Hsi Chih Men. Import and Export: ferrous alloys, section steels, steel tubes, cast iron pipes, steel plates and sheets, railway materials, rolled materials, metallic semi-finished products, electrical cables and wires.

China National Technical Import Corp., Erh Li Kou, Outside Hsi Chih Men. Import and Export: Project and equipment of complete factories.

China National Foreign Trade Transportation Corp.; Erh Li Kou, Outside Hsi Chih Men. Principal business: acting as agents for arranging transportation, forwarding, insurance and storage of state-owned import, export and transit cargoes.

Sinofracht Chartering and Shipbroking Corp. Principal business: chartering of vessels and booking of shipping space for shipment of state-owned import and export cargoes; acting as agents for principals at home and abroad in chartering vessels and booking shipping space and cargoes for vessels on behalf of owners.

ANNOUNCEMENT

PAUL J. G. KIDD, Q.C.

Election of Paul J. G. Kidd, Q.C., as vice-president of Hiram Walker & Sons Limited is announced by Howard R. Walton, President. Mr. Kidd joined the firm's legal department in 1936. He was elected a director in 1952.

On-the-Cuff Buy Boom Levels Off

Buyers, borrowers and creditors get cagier . . .

By DALTON ROBERTSON

The big boom in on-the-cuff buying is over: Consumer credit outstanding is leveling out for the first time since 1953-54.

When year-end figures become available, they will likely show consumers owe about $2.5 billion, roughly the same as at the end of 1956.

This contrasts sharply with earlier year - to - year jumps — consumer debt rose 13.3% during 1956; it went up 18.6% in 1955.

Indications now are that (1) 1958's borrowing for consumer purchases will be lower than 1957's and (2) as repayments of old debts flow in, the total debt outstanding will decline.

If this turns out to be the case, 1957-58 will be repeating the pattern of 1953-54 in many respects. And part of that pattern was a scaling down of debt to the point where consumers were ready to borrow and buy again.

But right now both those who buy on time and those who make the necessary credit available are becoming a bit cagier.

More Apparent

The Christmas and New Year's spending spree tends to camouflage it, but these trends are becoming rapidly more apparent:

- Installment (and cash) buying of automobiles is down substantially, likely to stay down for some months.
- Total retail buying is tending to slip below year-earlier levels and this is checking the growth of charge and retail installment sales.
- Several sales finance companies are finding collections somewhat harder to make, especially on used cars — but most are still getting their money.
- Most small loan companies are screening applicants for cash loans more closely than they have at any point in the past few years.

Flattening out of credit buying is part of current trends in the larger field of consumer spending generally. In the first three quarters of 1957:

—Consumer spending ran only 2% higher than a year before and about half of this dollar increase is accounted for by higher prices.

—This increase is not only the smallest postwar but also represents a slight decline in real consumption on a per capita basis.

—After accounting for price increases, spending on services and nondurables is up 3% but purchases of durables are down 5%. (Decline is due to the drop in auto sales which more than offset rises in sales of other durables.)

Volatile Item

Auto sales on the installment plan have long been the most volatile item in the consumer credit field, although accounting for only one-third of it.

Cash personal loans from banks and small loan companies, charge accounts and other retail installment credit have all risen steadily over the past few years.

But the spectacular increases and the big push behind consumer credit generally has been from the installment sales of cars.

By year-end 1957, however, debt owed to installment finance companies was expected to be about the same as the total owed at the end of 1956. (**FP** Dec. 7). This follows hard on the heels of a 21% increase in 1956 and a 30% hike in 1955.

High level of spending on durables, particularly cars, in 1956 was associated with the very considerable expansion of consumer credit outstanding, notes DBS.

But in the first nine months of 1957, repayments on auto purchases were substantially larger than in the same period in 1956 while new credit extended was below 1956.

As a result:

- Balance outstanding on the books of sales finance companies are now a slightly lower percentage of consumers' after-tax income (3.8%, first downturn after a steady rise starting in 1954).
- Total consumer credit is now estimated to be less than 11.5% of disposable income, down from 12.4% at year-end 1956 and moving rapidly toward 1954's 10.9%.

Fast-mounting consumer credit worried some economists and bankers a year ago.

This was summed up in the annual report of the Bank of Canada:

"A large increase in consumer credit adds to the less healthy features of a boom and the need to pay back such increased loans may well coincide with a period of post-boom recession and increase its severity."

Few today consider consumer debt at 11.5% of disposable income too high. At the same time, the current high rate of repayments is generally considered to be paving the way for new buying, new borrowing—if jobs and incomes remain largely unaffected by the current business adjustment.

Are consumers beginning to default on any debts? Are repayment requirements causing car owners any difficulties?

From some sections of the U. S. come reports that auto loan repayments are slowing down, repossessions increasing.

But in Canada, most sales finance companies say there is little change in repayment rates —and repossessions are running at their usual seasonal pace of about 1%.

In Good Shape

One good reason: Tightening of terms in Canada over the past year has left most companies in fairly good shape.

Before October 1956, 42-month repayment periods for new cars were not unknown. For many time purchases, 36 months was the term.

Today there are far fewer contracts over 30 months. For example, in one company in October 1956, 8% of contracts were for a term of more than 30 months; today, only 4% are.

Average term of new and used cars combined has not changed much over the past three years. But this average masks the fact that the riskier, longer repayment periods are over.

The average has not dropped because more buyers are taking 25 to 30 months to pay instead of 18 to 24 months. Several sales finance companies contend that this is due to the rising prices of cars.

Most sales finance companies admit collections are "quite a bit tougher" than even six months ago. This applies particularly to loans made for the purchase of second-hand cars.

One company official told **FP**: "It's taking twice as much effort to collect, but we are trying to keep collections up and so far have been successful."

Stated another:

Even Keel

"Our collections have been on an even keel since July and we are satisfied that our losses are still well under ½% of all outstandings.

"But we started stressing collections in August. Higher losses could be incurred should dealers run into sales difficulties."

Sales finance companies are not, on the whole, anxious to see terms extended again or downpayments made smaller.

As terms stand now, repayment schedules usually ensure that the market value of the car remains greater than the repayment balance still due, right through the period of repayment. That is, if after $500 has been repaid on a $1,500 loan, the market value of the car would still exceed the $1,000 still owing on it.

Here is the record of new and used auto financing in the first 10 months of 1957 vs. a year earlier:

—150,393 new cars financed from January-October, 9.6% fewer than in first 10 months in 1956.

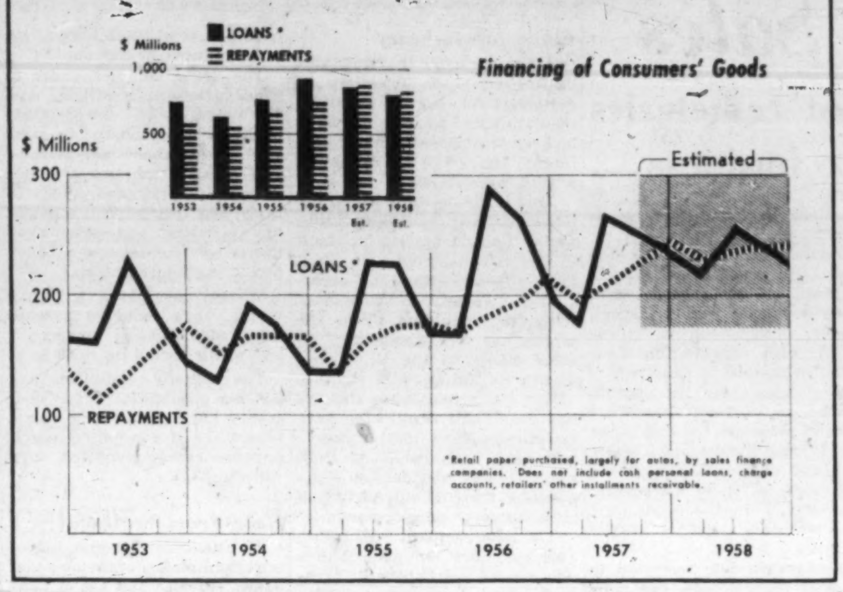
—$333.4 million involved in the financing, 5.8% less.

—322,900 used vehicles financed January-October 9, 4.4% fewer.

—$303.9 million involved in the used car financing, only 2% more than in the same months in 1956.

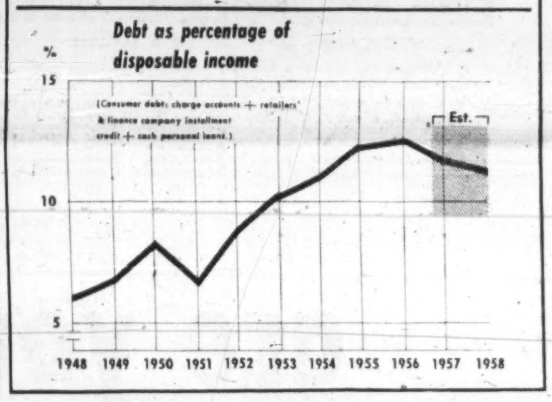
Total new car sales—whether bought on time or not—are currently running almost 7% below those in the comparable period in 1956. Total new commercial vehicle sales are off even more sharply, 14.5%.

New Installment Borrowing Falls Behind Repayments



*Retail paper purchased, largely for autos, by sales finance companies. Does not include cash personal loans, charge accounts, retailers' other installments receivable.

Total Consumer Debt Looms Less Large



Manitoba's 'Election' Road Costs May Top $32 Million

From Our Own Correspondent

WINNIPEG—A highway program for 1958 at least as large as the record one of 1957 will be submitted to the Legislature at its fifth and final session expected to start in late January or early February.

Counting money from the federal government for its half share of expenditures on the Trans-Canada Highway, the road bill for the election year will be about $32 million.

Approximately one third of this will be spent on the Trans-Canada to be completed in 1958 except for the perimeter route around the south side of the city of Winnipeg.

A small stretch of seal coating near the Ontario boundary is the only uncompleted part east of Winnipeg.

West, there is a stretch of uncompleted paving between Portage la Prairie and Brandon and a smaller piece west of Brandon. Both will be included in the 1958 program.

The costly perimeter route beyond the south limits of the city involves construction of two bridges, one over the Red River south of the University of Manitoba, the other over the Assiniboine at Charleswood.

Estimates of the public works department will include about $18 million for road purposes outside the Trans-Canada, most of it for new highways and replacements of parts of the province's 3,400-mile trunk highway system.

Potato Sales Program Slated

From Our Own Correspondent

FREDERICTON, N.B.—Potato-belt growers, shippers and fertilizer industry representatives have worked out a three-point promotion program to boost sales of N.B. table stock tubers in the Montreal market.

Under the plan, growers in Carleton, York, Victoria and Madawaska counties will donate from 17 to 20 cars of potatoes.

The shippers have agreed to pack, ship and sell the potatoes, with the entire proceeds to be turned into a sales' promotion fund.

The second phase of the project is to be worked out by the fertilizer companies supplying the potato growers.

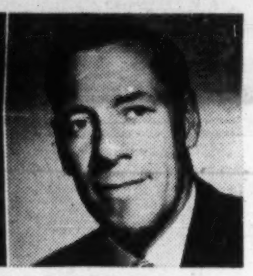
In addition to donations by the companies, a 50c a ton increase in fertilizer costs was suggested, with the money realized turned over to the fund.

Still only in the planning stage, the third point calls for setting up an entirely new potato industry council, to include all growers and shippers in the area.

ANNOUNCEMENT

GUTTA PERCHA APPOINTMENTS

J. M. ALLISON



J. B. PRENDERGAST

The appointment of J. M. Allison as Vice-President, Operations and J. B. Prendergast as Vice-President, Marketing, is announced by Mr. O. Simpson, Jr., President and General Manager of Gutta Percha & Rubber, Limited. Mr. Allison has served with the Company for 27 years acting in many capacities involving managerial responsibilities in finance, administration and manufacturing. HOW WALL STREET JOURNAL READERS WILL LIVE BETTER IN 1958

By a Subscriber

Since I started reading The Wall Street Journal, my income has increased from $9,000 to $14,000 a year.

But that is only part of the story. The Journal not only tells me how to earn more money—but also tells me how to get more value for the money I spend. That is why I believe that Journal readers will live better in 1958. Greater INCOME and greater VALUE for money spent.

For example, an automotive article in The Journal helped me trade in my old car at the right time. An article on building supplies gave me ideas on remodeling my home and showed me how to save $700.

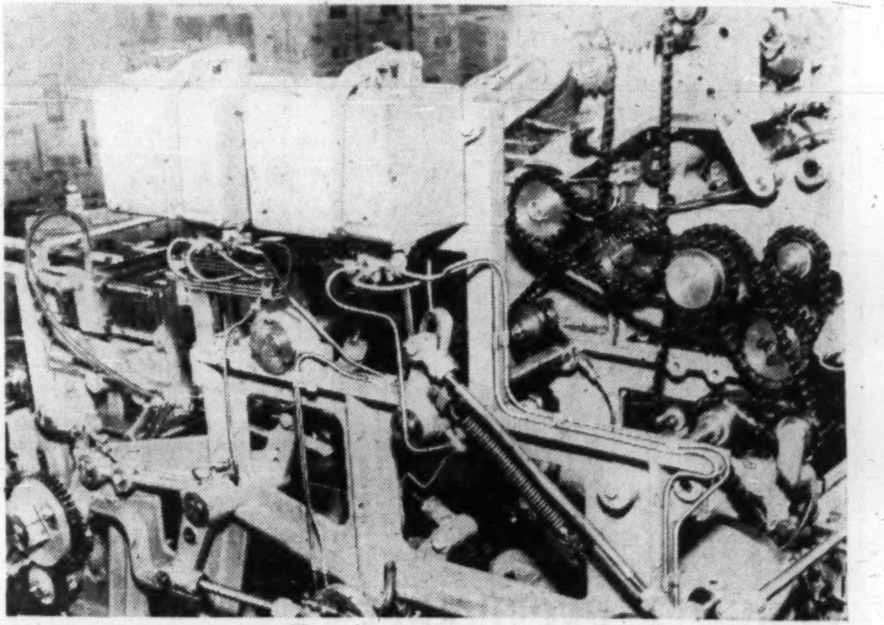
Articles on food and clothing point out the things to stock up on in order to save money. Articles on taxes guide me on what to do to keep my taxes down.

The Journal also gives me a better understanding of what is going on in the world. In conversation with other men I find that I know how to interpret business and government trends a little better than they do. They wonder where I get my "inside dope."

This story is typical. Because the reports in The Wall Street Journal come to you daily, you get quick warning of any new trend that may affect your income. You get the facts in time to protect your interests or seize a profit. The Journal is a wonderful aid to salaried men making $7,000 to $20,000 a year. It is valuable to owners of small business concerns. It can be of priceless benefit to ambitious young men. To assure speedy delivery to you anywhere in the U. S., The Journal is printed daily in five cities — New York, Washington, Chicago, Dallas, and San Francisco.

The Wall Street Journal is the complete business DAILY. Has largest staff of writers on business and finance. The only business paper served by all four big press associations. It costs $20 a year, but you can get a Trial Subscription for three months for $6. Just tear out this ad and attach check for $6 and mail. Or tell us to bill you. CFP 1-11

Address: The Wall Street Journal, 44 Broad St., New York 4, N.Y.



Colgate-Palmolive's Soap Wrapping Machines need no time-off for lubrication —because they're lubricated in action by

A TECALEMIT ONE-SHOT SYSTEM

These machines are one of the final links between Colgate-Palmolive and their customers. It's important that they're on the job, *all the time.*

They wrap the finished soap bars in their familiar green covers—several thousand of them per hour, many hours a day—without a single hour off for lubrication. This continuous production is achieved with a TECALEMIT One-Shot System that lubricates the machines in operation at the touch of a button. *It's just one of the many TECALEMIT Automatic* and Semi-Automatic Systems that are available to industry.

Colgate-Palmolive found that the TECALEMIT system not only saved them the down-for-lubrication time that they had previously accepted as inevitable, but considerably cut down on breakdowns, too. In fact so profitable was the initial TECALEMIT Lubrication installation to them, *that they have since installed additional systems on other machines.*

Solving lubricating problems is our one interest at TECALEMIT Ltd. If time off for lubrication means wasted production time in your factory, why not give us a call? We have world-wide experience and facilities behind us.

TECALEMIT

ANNOUNCEMENT

ELECTED VICE-PRESIDENT

ROBERT J. WHITLA

The appointment of Robert J. Whitla as a Vice-President of Grant Advertising of Canada Ltd., has been announced by J. G. Wren, Executive Vice-President and General Manager. A native of Toronto, Mr. Whitla joined the Grant Agency in 1955.

In making the announcement Mr. Wren pointed out that the parent company's Board of Directors recognized the importance of having its Canadian operation staffed with qualified Canadian advertising personnel to better serve the agency's growing list of important advertisers.

A Specialized Lighting Service

LUMINOUS CEILINGS

See better, feel better, work better with glare-free LUMINOUS CEILINGS.

Wall-to-wall lighting provides increased versatility in desk and partition location, and eliminates eye fatigue.

SPECIALIZED LIGHTING design combines beauty with utility, increases personnel efficiency, and reduces absenteeism.

TASTEFUL PROMOTION

Tombstone Men Pepping Sales

Non-monument cemeteries are cutting into business . . .

By JACK McARTHUR

MONTREAL (Staff) — Canada's $10-million-a-year tombstone industry finds life bitter-sweet.

The bitter: Memorial gardens and other non-monument cemeteries are cutting into its business.

The sweet: Under the prod of this competition, monument-makers are putting more emphasis on increased efficiency featuring modern business methods, sales techniques and a quiet and tasteful brand of public relations.

Production methods, too, have changed radically.

The picture of an engraver laboriously carving tombstones by hand is becoming as outdated as the handlebar moustache.

Craftsmen today, using the sand blast process, are capable of great and accurate detail in a much shorter period. Faces, figures, designs can be reproduced with considerable precision in marble or granite.

Key men in the actual production of letters and designs in stone are the draftsmen who lay out the desired inscription and design; the engraver who outlines it in sand blast composition on the stone; the sand blaster who cuts it into the stone.

Most memorials now are in granite. Marble was preferred years ago but it's softer, doesn't weather as well. More attention is given today to landscaping, over-all cemetery design and regulations to govern type, size and finish of memorials.

Far fewer crosses are used; and many more markers, which are slabs laid flat on the ground over the grave.

New Machines

In the manufacturing end, new automatic polishers, grinders and wire saws feature technical improvements.

In the U.S. **Rock of Ages Corp.** has adapted for granite the Keller die sinker developed by the auto and aircraft industries. It does rough copying of three-dimensional designs in stone. The craftsman can then concentrate on high-skill finishing.

Also, **White Granite Co.** of Barre, Vermont, worked out a process for rosary beads in monuments which reportedly increased business substantially. This is now owned by Rock of Ages.

Rock of Ages is probably the major company in the industry in North America. Its $6 million annual volume touches Canada through two manufacturing distributors — **Smith Monument Co.** of Toronto and **Brodie's Ltd.** of Iberville, Que.

Smith serves Ontario and the west; Brodie's, Quebec and the Maritimes.

Among other nationally known manufacturers and quarriers are **Stanstead Granite Co., Thompson Granite Co.** and **Ontario Marble Co.**

The quarry industry has been expanding, with a number of new quarries opened recently in Quebec, Ontario and New Brunswick. This boosts the amount of Canadian-produced granite used. Canadian pink granite is popular but in short supply.

Douglas King, of the Canadian Association of Memorial Craftsmen suggests $10 million would be a modest estimate of annual monument output.

There is no way of knowing how much larger this would be but for the growth of non-monument cemeteries.

Free Choice

Memorial craftsmen urge that the public be given a free choice of whether or not to buy a tombstone.

And they complain about the sales methods of memorial gardens operators.

They have found some support among churches.

The executive council of the Anglican Church of Canada last fall suggested that provincial governments put cemeteries established for profit under the jurisdiction of public utilities boards.

This followed a report from a church committee that memorial gardens-type cemeteries generally are profit-making businesses with intensive sales campaigns. It suggested that plot-holders be assured the right to buy markers or memorials from any supplier.

This competition for public favor between memorial gardens and tombstone-makers — plus technical advance in monument production — is giving a modern look to one of the world's most tradition-steeped industries.

NEW MILL

From Our Own Correspondent

LETHBRIDGE — A new lumber operation is to be established in the Alberta section of the Crow's Nest Pass early this year by **Atlas Lumber Co.**, and will prove a boon for the depressed area. The company has purchased an 80-acre site in the village of Frank, near the famous Frank Slide, for a planing mill.

LAURENTIDE ACCEPTANCE CORP. Dec. 10 had 193,057 class A shares outstanding.

Growth

Manufacturing plants new to Canada, expansions of existing industry across the nation

Areas, industries are invited to report their progress in this column

Fibre for Industry

A new industry that will fabricate and stock a variety of materials for use as electrical insulation and in some mechanical applications in many different fields will be operating within three months.

That is the deadline which the newly formed **Spaulding Fibre Co. of Canada** has set for itself in the establishment of a plant in the Toronto-Hamilton area.

The company is associated with the **Spaulding Fibre Co.** which has five plants and 30 sales offices in the U. S. and plants in France and Britain.

But its formation in Canada has come as a result of a long association with local markets and here it is confident that, while it faces considerable competition, there is still plenty of room for new developments.

The new company will fabricate and stock laminated phenolic, vulcanized fibre transformer pressboard, and Spauldo (rag paper) at the new plant which will represent an investment of around $250,000.

A branch sales office has been in operation at Port Credit, Ont. for over a year.

* * *

Precision Work

Aviation Electric Ltd. of Montreal has announced the completion of an addition of 35,000 sq. ft. to its Montreal plant.

The new area houses an air-conditioned manufacturing machine shop and special test facilities for jet fuel controls, fuel flowmeters, and hydraulic and other equipment associated with highly inflammable liquids.

The entire new section, which has been added to the existing plant in the form of a wing, has been equipped with air filtering, humidity and temperature control.

Temperature will be maintained at a standard 72 deg. F, with tolerance of ± 1 deg.

This will permit the manufacturing of precision instruments, accessories and components for the aircraft and other industries requiring extremely close tolerances.

The addition of the new wing brings the total floor area of the Montreal plant to 150,000 sq. ft.

* * *

Air Cleaners

Full manufacturing operations have been started by **Trion (Canada) Ltd.**, a subsidiary of **Trion, Inc.**, McKees Rocks, Pa., in its new Toronto factory.

The company is now marketing its electronic air cleaning units throughout Canada for industrial, commercial and residential uses. Sales representatives are located in all major Canadian cities.

Trions have been imported into Canada for some years but the expanding Canadian market and increased demand for Trion equipment justified opening a factory in Canada. This will enable the company to speed installations at lower prices, according to E. W. Meyers, Jr., president.

A world-wide organization, Trion has representatives in all 48 U. S. states and in 51 foreign countries.

Another subsidiary, **Trion Aktien-Gesellschaft**, is located in Zurich, Switzerland, with offices, manufacturing facilities and research laboratories in West Germany, and administrative offices in Tokyo, Japan.

* * *

Heating Sales

Continue-Flo Heating Products, Ltd., manufacturers and distributors of warm air heating and air conditioning equipment located at 503-523 James St. N., Hamilton, plans an immediate expansion of facilities to meet a sharp increase in the demand for its products.

President and General Manager B. H. Browning says: "We are launching an immediate addition of 5,000 sq. ft. to meet the expected increased volume requirements of 1958 and the future.

"Continue-Flo has also leased a further storage space of 28,000 sq. ft. to maintain and improve immediate delivery from stock.

"These expansion moves," stated Browning, "are necessitated by the fact that with the aid of our dealers and distributors throughout the Dominion we have attained an all-time record sales volume of over $2 million for 1957—an increase of 48% over our sales in 1956."

* * *

First in Canada?

Wire mesh conveyor belts, now being made at Hamilton, Ont. by **Frost Steel & Wire Co.** are claimed by that company to be the first of their kind to be manufactured in Canada.

The belts, for use under a wide variety of conditions, are of woven wire construction, made to specifications in mild steel, high carbon steel, galvanized steel, aluminum and the various stainless steel grades. It is claimed they provide a specially efficient, and economical means of continuous product processing and conveying.

Woven into right or left hand weave, they come in a wide range of meshes in any length and width from 6 in. to 60 in.

The recently-completed expansion program at Frost Steel & Wire has facilitated the manufacture of this product, which until now was imported, says the company.

* * *

Here From Scotland

Metropolitan Toronto Industrial Commission announces that **James Howden and Co. of Canada,** associate company of **James Howden and Co.**, Glasgow, Scotland, is now constructing a modern plant and office building at 1510 Birchmount road in Scarborough.

This British firm was founded in 1854 and has grown into one of the world's largest manufacturers of industrial and power plant ancillary equipment for both land and marine applications.

The new building will have an initial floor area of 37,000 sq. ft. and is located on a 12-acre site providing ample room for future expansion.

The company's products include various types of blowers, dust collectors, compressors, and air preheaters. Manufacturing machinery is now being produced in Scotland and will be installed early next spring.

The new operation is under the direction of W. MacOwan.

DRIVERS COURSE

The Ontario Safety League will conduct a course for trainers of commercial drivers at the league's Safety Training Institute in Toronto, April 21-25. Course director will be Harry D. Fletcher, institute of public safety, Pennsylvania State University.

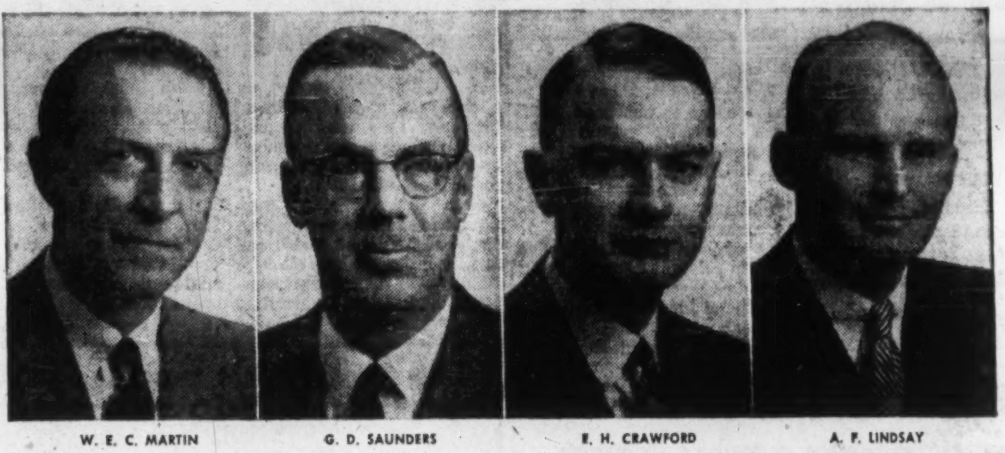
Canada Life Executive Appointments



W. E. C. MARTIN — G. D. SAUNDERS — E. H. CRAWFORD — A. F. LINDSAY

The Canada Life Assurance Company takes pleasure in announcing two promotions among the Officers in the Investment Division and the appointment of two new Officers.

W. E. C. Martin and G. D. Saunders, who have been Officers of the Company for a number of years, are now Associate Treasurers.

E. H. Crawford and A. F. Lindsay have been appointed Assistant Treasurers.

are you one of these?

- PRIVATE INVESTOR
- ACCOUNTANT
- TAX CONSULTANT
- LAWYER
- EXECUTOR
- TREASURER

In the course of business or personal affairs, most of us deal with income received through dividend payments made by Canadian companies. We must account for these dividends in income tax returns, reports to clients, etc.

Purchase or sale of securities — stock splits — extra payments — changes in payment rates — tax-free distributions — all of these can make such accounting difficult and time-consuming.

The Financial Post Corporation Service 1957 Dividend Record puts all this information at your fingertips. It gives an individual record of each of more than 3,000 dividend payments, made by some 700 companies on approximately 1,000 different securities. In addition to the amount of each dividend, it shows the payment date, record and (where applicable) ex-dividend date.

The 1957 Dividend Record will be published the middle of January, 1958. Price is $2.00 for a single copy, two copies for $2.50, three for $3.00. Use this order form now.

The Financial Post Corporation Service | 481 University Ave., Toronto 2, Ontario.

Six Years: Industrials Outstrip Mines and Oils

Six busy years of market activity have carried Canadian stocks into new high ground — and back down to more accustomed levels. The accompanying chart supplements the six-year record of individual stocks' price movements, on pages 28, 29, 30.

● INDUSTRIALS have scored the biggest gains. After dipping in late 1953 to only 83% of their values of January, 1952, they soared to a record high of 161% in the summer of 1956. Two attempts to move still higher failed in 1957, and four months' decline followed.

By the end of 1957, the DBS Investors' Price Index was 119% of its January, 1952, level.

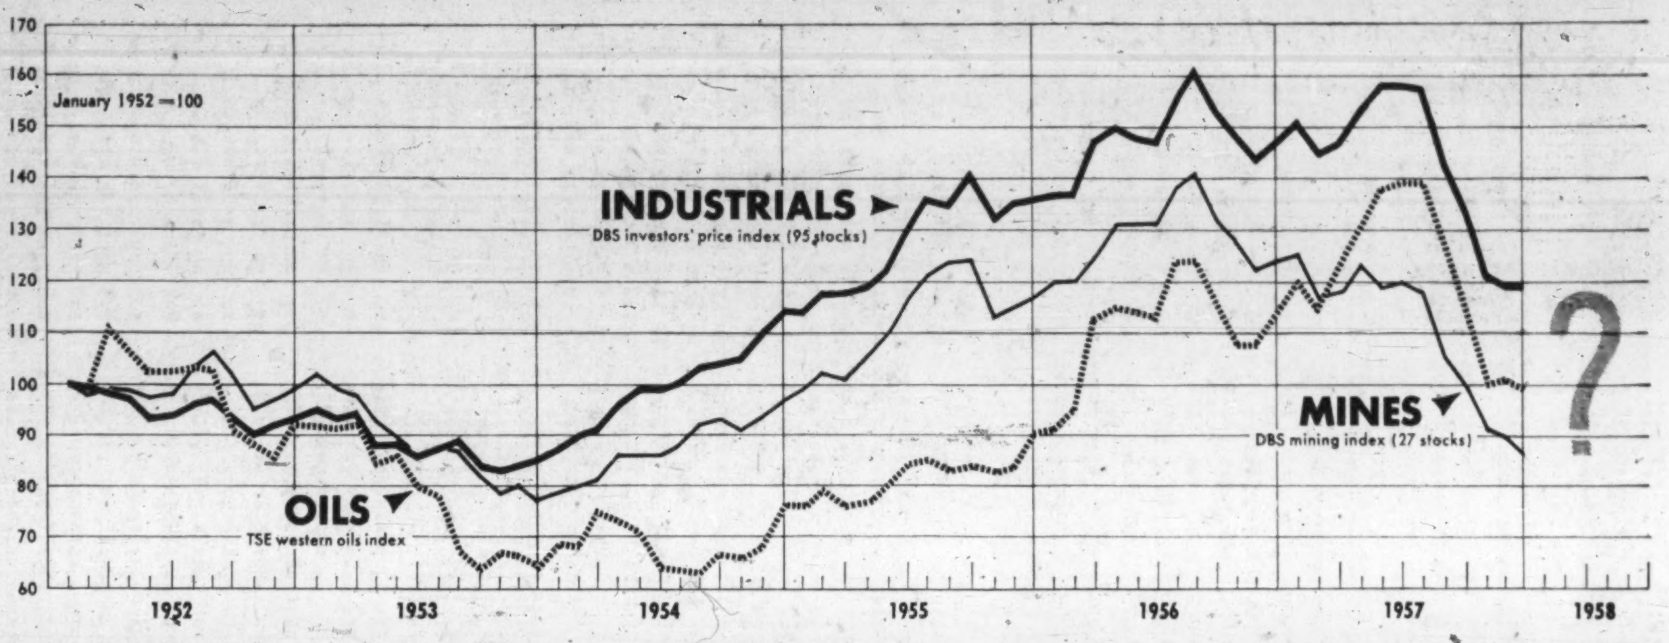
● MINING STOCKS have followed the same lines, but first dipped lower (77%), then peaked lower (141%) than Industrials.

In 1957, they fell farther (to 86%) because of over-supply and sagging metal prices.

● WESTERN OIL STOCKS had climbed high in investor favor by early 1952. As enthusiasm waned, values declined until a pick-up began late in 1954 and continued until mid-1956.

A brief setback followed, and then rising production brought oil stocks back into favor throughout early 1957.

But by mid-year, marketing difficulties weakened prices, and as 1957 ended oil stocks were 1% below their price levels of six years earlier.



January Dividends Down 7.4%

Canadian dividend payments and declarations for January, 1958, are down 7.4% on a year ago.

Preliminary total for 292 issues is $71.4 million, compared with $77.1 million for 328 issues in January, 1957.

It can be expected that the decline will be smaller when the final total for the month is known. At this date last year another 45 issues had still to declare dividends. The final total for the month was $2.2 million more than the preliminary figure.

Present figures show declines in all groups except the public utilities and industrials section. Here is a breakdown of the preliminary declarations for January, 1958, compared with the final total (in brackets) for January, 1957:

—In the industrial and public utilities section, payments declared total $48.9 million ($48.8 million), up 0.1% on 210 (235) issues.

—In the mining category, payments declared total $13.1 million ($17.7 million), down 26.1% on 10 (14) issues.

—In the oil group, payments declared total $3.6 million ($4.5 million), down 19% on 17 (18) issues.

—In the financial section, payments declared total $5.8 million ($5.9 million), down 2.6% on 55 (61) issues.

Following is a list of payments for January as compiled by **FP** from records available at Jan. 3:

U.S. Probers Going After Newsprint

Special Correspondence

WASHINGTON, D.C.—Washington "trust busters" are after the newsprint industry.

The Justice Department has launched an anti-trust investigation of U. S. newsprint companies that control Canadian newsprint producers or are affiliated with Canadian firms.

It has been stressed that the U. S. investigators are not entering the offices of strictly Canadian companies and are not seeking records that have to do solely with Canadian affairs.

The FBI is handling the enquiry on orders of Victor R. Hansen, assistant attorney general. Agents already have begun examining files of a number of companies, including several in the New York City area.

TOWN OF CHAPAIS, Que., has sold $25,500 5%, 1959-61 and $79,500 in 5½%, 1962-78 serial debentures to **Credit Anglo-Francais Ltee.** at 94.11 indicating net cost of 6.295%. Callable after Jan. 1, 1968. Proceeds for water works, sewers and purchase of equipment. At Dec. 31, 1956, net funded debt was $60,000 and population 1,800.

VILLAGE OF SHAWINIGAN SOUTH, Que., has sold $125,000 5%, 20-year serial debentures to a syndicate headed by **La Corporation de Prets de Quebec** at 97.82 indicating net cost of 5.264%. Callable after Dec. 1, 1967. Proceeds for consolidation of floating debt, purchase of equipment and land, water works, sewers, etc. At Dec. 31, 1956 net funded debt was $907,300. Population 11,206.

ANNOUNCEMENT

Canada Life Executive Promotions

J. D. MILNE, F.S.A. J. H. WAINWRIGHT T. R. WALSH, LL.B.

The Canada Life Assurance Company is pleased to announce three executive promotions. J. D. Milne, F.S.A. has been appointed Associate Secretary and Comptroller, J. H. Wainwright has been appointed Associate Secretary and Claims Officer. T. R. Walsh, LL.B. has been appointed Associate Secretary and General Counsel. All have been Officers of the Company for a number of years.

The nurse is saving regularly for a vacation trip
The father is saving for the things a growing child will need
Both have a bank account—and a purpose for saving

Nurse and father both agree that some things are too important to leave to chance. So, like most Canadians, each uses a chartered bank for planned saving, making regular deposits to accomplish a definite purpose.

Your own savings plan may be a short-term, modest one — maybe a vacation trip, or new drapes for the living room. Or your goal may be long-range, like providing more security, greater comfort and independence for you and your family.

But whatever use you find for the money you save, you'll always be glad you saved it!

Save at a bank — millions do!

THE CHARTERED BANKS SERVING YOUR COMMUNITY

'Moon Bouncing' Helping Our Scientists vs. ICBM

By LEONARD BERTIN

Canadian defense scientists have been bouncing signals off the moon in an attempt to beat the intercontinental ballistic missile.

Careful examination of the reflected signals tells them what to expect when Aurora Borealis, the famous "Northern Lights", take a hand in jamming the triple radar fence that rings the frozen northlands.

Data obtained in this way will certainly lead also to an improvement in long-range telecommunications for peaceful as well as military purposes.

The antenna used is a television-type bowl aerial 28 ft. in diameter.

Most of the existing radar defenses, known as the DEW or Distant Early Warning line were built to detect aircraft, however.

They will be useless against rockets.

To beat the new threat a program of fundamental research has been started and the whole emphasis of defense research in Canada has swung away from investigations likely to have immediate applications.

Only in this way, it is felt, can Canada hope to make a worthwhile contribution to the problem of beating weapons of the future, like the ICBM.

One of the new research aids being constructed this winter is a highly complex radar instrument for a new establishment near Prince Albert, Sask.

This will be a twin of the antenna at Massachusetts Institute of Technology, said to be the most advanced straight radar installation on the North American continent.

Another major priority is in the field of infra-red radiation, which is invisible and ranges in wavelength between visible red light and the longest of the normal radar wavelengths.

Infra-red detectors are difficult to jam. They are extremely sensitive and some of them are effective over very great distances.

An infra-red antenna carried by an aircraft in the stratosphere ought to be able to track a high-flying rocket, no matter how far away it was.

Other projects listed in a "Year-end Round-up" released by the Defense Research Board in Ottawa are:

- Experiments with a scale model of an ICBM in a simulated atmosphere of the type to be expected at very high altitudes.
- Researches in upper atmospheric physics.
- Use of infra-red radiation to guide missiles.
- Development of new propellants for very large rockets.
- Investigations of "hydrofoil" or planing boats that would skid along the surface of the water at very great speeds; trials began this fall in Halifax harbor.
- Tracking of satellites. Defense Research Board scientists in Canada claim to have been the first to plot accurately the course of Sputnik I.
- Glaciological researches that may lead to better knowledge of areas over which Canadian troops might need to operate.

Trans-Canada Lets Contracts

Trans-Canada Pipe Lines Ltd. has awarded the construction contracts on the 486 miles of pipeline to be built this year from Kapuskasing to Maple,, Ont.; near Toronto.

The work has been divided into seven separate construction spreads.

It is expected that contractors will have time to get work under way on clearing and brushing the right-of-way through the winter so that rock ditch drilling and shooting will be advanced for a start on pipe laying around May 1.

Here is a list of the different spreads and the successful contractors:

Spread eight - 82 miles between Kapuskasing River and vicinity of Potter, south of Cochrane — **Grayco Constructors Canadian Ltd.**

Spread nine - 83 miles from Potter to a point a few miles southwest of Kirkland Lake — **Majestic Contractors Ltd.**

Spread 10 - 57 miles between Kirkland Lake and Rib Lake — **Dutton-Williams Bros.**

Spread 11 - 47 miles from Rib Lake to a point near Tilden Lake — **Canadian Bechtel Ltd.**

Spread 12 - 62 miles between Tilden Lake and South River, passing through North Bay — **Morrison-Shivers Ltd.**

Spread 13 - 63 miles from South River to Bracebridge — **Price-Poole.**

Spread 14 - 92 miles from Bracebridge to the end of the line in the vicinity of Maple, Ont. 15 miles north of Toronto — **Oklahoma Constructors Inc.**

Philips Revamps Cdn. Operations

Philips Electronics Industries Ltd. has been incorporated to include the manufacturing, commercial activities and auxiliary services of Philips' companies in Canada.

Previous name was **Canadian Radio Manufacturing Corp.** It is the Canadian subsidiary of the giant **N. V. Philips**, Eindhoven, Holland.

D. C. F. van Eendenburg has been appointed president of the new company, announces Chairman R. Messier.

Philips Industries Ltd., Rogers Electronic Tubes & Components division, and the Industrial & Medical Equipment division, will be the company's three marketing sections.

Saskatoon Scores Building Record

From Our Own Correspondent

SASKATOON — Mark up Saskatoon as one of the fastest-moving places in Canada as far as building is concerned. Last year was a record in the amount of construction started.

And there's a good start for '58.

Last year $21,746,075 worth of construction was started compared to $16,590,000 in the previous record year of 1955. Another 1957 record was set up by the 2,118 building permits issued.

Housing starts totaled more in Saskatoon in 1957 than in any year since 1912. Value of the 1,040 homes started is close to $10 million.

Industrial and commercial building permits representing more than $1.5 million were taken out. Permits for churches, hospitals and public buildings totaled over $5.1 million.

Prospects for 1958 have been given a large-sized boost by an announcement by **Hudson's Bay Co.** to build a $3-million store in Saskatoon, beginning as soon as possible in the spring. It's said to be the biggest single retail project ever announced in the city.

BOAC Chief Says His Line Will Double Business Here

MONTREAL (Staff) — A visitor from Britain called in at Montreal, Ottawa and Toronto this week. He has some ambitious airline plans for Canada.

He is chairman of **British Overseas Airways**, Gerard D'Erlanger.

Within the next four years, he told **FP**, his line hopes to double its Canadian business.

It is no secret that BOAC has long been hoping for rights out of Toronto and Vancouver as well as Montreal, which it serves at present.

This week's visit was—in his words—to meet people. Details of bilateral air rights must be settled at governmental level.

But most airline observers were sure that the BOAC chief's visit would include some unofficial lobbying for the additional services.

D'Erlanger sits in possibly the hottest seat in a difficult industry.

BOAC has long had to obey the whims of successive U. K. governments. A shortage of dollars—plus an aggressive support-the-home-market policy—prevented the line from competing on many routes with the latest U. S. designs.

Now there has been an easing of that philosophy. BOAC has been allowed to buy a fleet of U. S. Douglas DC-7Cs for its Atlantic services and, later, Boeing 707 jets.

Coupled with orders over the next 10 years for U. K. designs a total of $500 million worth of planes will be delivered.

Faced with that sort of expense, BOAC is now launching an active expansion program. Canada, D'Erlanger said, plays a big part in this plan.

For the next two years turboprop Bristol Britannias should give BOAC a wide advantage over its competitors Canada-to-Europe. Montreal - to - London flight time will be 9½ hr. versus the 12 or more of present services.

If BOAC's ambitions are realized it will introduce Toronto-Vancouver-Tokyo services as well as increasing the frequency of its present flights to Montreal.

Loosened U.S. Barter Laws Not Good News for Canada

Special Correspondence

WASHINGTON, D.C.—A U. S. Department of Agriculture press release slipped out almost unnoticed during the holiday season "defining" the U. S. barter program. It is not good news for Canada.

For some time there has been a major drive in Washington to bring back wholesale barter deals, exchanging U. S. farm surpluses for strategic materials.

Canada has found this type of deal one of the most objectionable in the U. S. bag of tricks to get rid of surpluses in the world market.

Last May, wholesale barter deals were sharply reduced under a new ruling.

It was thought as much could be sold for dollars as has been bartered. This his not proved to be the case, and many quarters have demanded a loosening of the barter arrangements.

The "defining" press release helps to loosen the barter regulations, although it does not bring back wholesale barter deals. It will result in about a half-way return, according to officials here.

"It loosens some of the tightness on the earlier restrictions," one U.S.D.A. official told the **FP**.

Basically, here's what the definition means:

Up to now, a trader had to tell Washington in advance from where the strategic material is coming and to where the surplus commodity is going. Now, the trader does not have to specify in advance where the surplus is going.

There are two lists, however, which he must follow: One specifies a large number of countries with which it is alright to make barter deals; and the second **specifies** a smaller number of countries with which barter deals must be approved by U.S.D.A. for "additionality."

This means it must be proved that the barter deal gives a country surpluses over and above what that country normally would buy in dollars from U. S.

For these countries, the trader must get a signed statement from a responsible government official in the receiving country saying the barter deal would bring in food and fibre in addition to normal purchases for dollars.

It is not likely this complicated loosening of the restrictions will fully satisfy those Congressmen and lobby groups which have been demanding a return to wide-open barter deals.

The lead and zinc lobby is very much in favor of such a return because it was a major prop for lead and zinc in the world market, taking a lot of surplus production off the market and putting it into U. S. defense stockpiles.

There may be more demand at the current session of Congress for more barter arrangements, especially so as it looks like U. S. farm production will set more records in the next few years.

Another Retailers' Course

The Alberta Chambers of Commerce and Agriculture and the Western Business Research Institute are sponsoring a two-week seminar on "Managing a Small Business."

The seminar will be held at the Agricultural School at Olds, Alta., April 14-26. It is "designed to meet the challenge of competition of the large chain store."

It's the second such course announced recently. North York school board in Metropolitan Toronto began an evening course in October along the same lines (**FP**, Oct. 26, Nov. 2).

The Alberta course will be limited to 60 persons who own and operate businesses employing 15 persons or less. Students will be selected with the aim of securing wide geographical representation. Main subjects will be finance, taxation, merchandising and advertising.

Course moderators are Ben A. Lindberg, director, school of commerce, University of Alberta; Donald G. Colley, president, **Blodgett & Colley Inc.**, Boston, and John R. Munro, managing director, **Munro's Ltd.**

The case method — analysis and discussion of business problems — will be employed.

U.K. Government Again Offering Athlone Grants

The U.K. Government is again offering to Canadians 38 Athlone Fellowships for two years of postgraduate study in industrial establishments or universities in Britain.

The Athlone fellowship program was started in 1951. Twenty-eight of the fellowships go to engineering students in their final year and 10 to young engineers with "suitable" qualifications who have spent some time in industry. These last need not necessarily be graduates.

The fellowships cover travel costs, living expenses and academic fees.

P-A-X joins the Royal Canadian Navy

Internal communications on modern warships depend to a very large extent on automatic telephones. In port or at sea these telephones must function perfectly. Orders must be transmitted and received without delay, without interruption and with no possibility of error.

By the end of 1958 the R.C.N. expects to have 14 of the new St. Laurent class destroyer escorts in service, equipped with the latest submarine detection and tracking devices and weapons. And telephone systems in all these ships will be the famous P-A-X, specially designed for naval service and supplied by Automatic Electric.

Automatic Electric Sales (Canada) Limited,
185 Bartley Drive, Toronto 16, Ontario.
Branches across Canada.

AUTOMATIC ELECTRIC

Factory: Brockville, Ontario ORIGINATORS OF THE DIAL TELEPHONE PIONEERS IN ELECTRICAL CONTROL

New Firms Handle Modern Furniture

For the first time contemporary furniture collections designed by Paul McCobb will be manufactured in Canada.

Two new Toronto companies will distribute these lines exclusively. **Canadian Furniture Sales Co.** will handle the popular group for the home, and **Contemporary Distribution Ltd.** will handle the more expensive groupings including executive office furniture.

A complete program for marketing the Paul McCobb designs will take place this year, according to **B. G. Mesberg,** the U.S. sales agency, who have licensed the Canadian manufacturing and distribution.

Bank Staff Changes

P. C. RONEY, to be accountant, City View, Ont.

J. G. SAUNDERS, to be acting manager, Fogo, Nfld.

FERGUSON TRACTORS FIRST OVERLAND TO SOUTH POLE

For the first time in over 40 years the South Pole has been reached by an overland route—for the first time ever by tractor. The New Zealand party, led by Sir Edmund Hillary, reached the pole after a 400 mile dash—by Ferguson Tractors!

Ferguson System Tractors in Antarctic Conditions

The tractors employed on this expedition were modified Ferguson System tractors similar to the many thousands now in use on agricultural work throughout the world. Even in gruelling antarctic conditions these remarkable machines performed amazing trek and haulage tasks.

The world-famous Ferguson System was of particular value in the extremely hazardous snow and ice conditions. A member of the expedition has said: "These farm tractors, which no one ever before considered ideal for polar work, have been going magnificently."

This antarctic expedition has proved the greatest work-test any tractor could face. That Ferguson Tractors have withstood this unique test is a tribute to their outstanding engineering and design.

Congratulations to Sir Edmund Hillary and the entire expedition on their great achievement.

The Executive Wears Seaboots

The pitfalls, profits and prospects of a modern Bluenose fishing skipper . . .

By ROY K. COOKE

LIVERPOOL, N.S. — "Down East" the Atlantic still pounds a white lined surf against the coast, year in and year out.

Pirates, privateers and men o' war have all disappeared from this scene but the blood of these adventurers still flows strongly in their modern counterpart: The Bluenose fisherman.

For a real taste of adventure and hard work, ship aboard the Janet Irene, a 60-ft. longliner owned by her skipper, Warren Levy, of Liverpool.

To earn a living, Levy and his five-man crew spend about 10 months of each year fishing for cod, haddock, halibut, hake, cusk and the elusive swordfish anywhere up to 150 miles offshore.

They buck seas constantly that would make other men run for port.

They live for up to 14 days in a foc's'l so crowded that some of the men have to lie in their bunks when all hands are present.

This is another in an **FP** *series on unique jobs in unique fields.*

Other stories about men and women who earn pay and profits in unusual businesses will appear from time to time.

The table is set on hinges so it folds against the bulkhead out of the way.

The tiny oil cook stove would fit into an apple box.

Food is prepared by one of the crew who drops his ripping knife half an hour before meal time to peel potatoes and fry meat.

Because the 60-ft. hull is battered constantly it is impossible to get a good night's rest.

Longliner crews share with dragger crews top earnings among the fishermen on the coast.

Levy has probably the best earning average of any longliner skipper in Nova Scotia.

His $30,000 boat earned him $8,500 in 1956. He expects to pay income tax on about $8,000 in '57.

The crew who have no investment in the Janet Irene earn about $3,800 for 10 months' work, and that includes their food.

Warren settles his trips on a 40% gross of the total stock plus a share with the crew.

The gross stock is the total value of the catch without any expenses deducted.

For example, on 15,000 lb. of halibut, which would be an excellent catch, at 20c lb. the gross stock would be $3,000.

Levy's share at 40% is $1,200.

Out of the balance of $1,800 the cost of food, ice, oil and bait is deducted and on an average 10-day trip amounts to $500.

The balance of $1,300 is split six ways. Each man receiving approximately $216.

Skipper Pays

For the crew it is all take home pay apart from income tax, but the skipper has to pay for the upkeep of his boat.

At least once a year she goes on a slip for repairs to the hull and painting.

Repairs to the engine and electronic gear are also expensive and come out of the owner's pocket, as does the installation of new equipment.

For less than two weeks' work even aboard a bouncing longliner on the cold and spray swept Atlantic these are good earnings.

But unfortunately every trip isn't like this.

If it were, their women would be clad in mink and the rockbound coast of the province would be lined with a succession of luxury manors.

The high paying halibut are not caught every trip. The weather cuts down on fishing, too.

Levy estimates that it costs at least $10,000 a year just for repairs and insurance.

Almost over night fishing has been catapulted into the electronic age. Many fishing boats are using gear that would have sounded fantastic even a generation ago.

This equipment has helped to make fishing an expensive operation, but it has taken away many of the hazards.

Levy has two Loran units to estimate his position at sea, each costing $400.

An $800 sounder tracks the sea bottom on a chart.

The radio telephone costs $800.

Six months ago a radar set was installed, rented at $100 a month. The installation cost was $1,000.

The fishing skippers of even 30 years ago depended mainly on a chart, sextant and a compass.

How they could find their home port in thick of fog or a blinding snow storm is a mystery, but it happened time after time.

"We started to depend on electronics," says Levy, "and that took away our other ability, whatever it was.

"I've tried to get it back and it's gone because it just wasn't being used."

Longlining is a fairly recent development, dating from the 1940s. It has been a tremendous stimulus to the fishing industry.

In dozens of small fishing villages and communities, shore fishermen were eking out a marginal living with 25 ft. and 30 ft. boats.

Their craft were too small to go far out to sea for good catches, and the owners didn't have the money to invest in bigger boats.

A New Boat

To improve the situation, provincial and federal officials got together to work out a new type of boat called the longliner.

It would use the traditional trawl line gear from the deck instead of from dories, and it required fewer crew.

To stimulate the building of these boats the Fishermen's Loan Board assists fishermen with a subsidy and a loan. Apart from the necessary ability, the only stipulation is a one-third down payment.

The advantages:

- **With a reasonable** investment, more individuals can become skipper owners.
- **The boats also** provided new jobs for crews.
- **Many small fish plants** in isolated communities now have an improved steady source of fish which means more employment ashore for fish packers and handlers.

FISHING SKIPPER Levy and his boat.

Standing five ft. six in. in his stocking feet, Warren Levy weighs 155 lb. His body belies the amount of work he can do and the physical punishment he can stand.

At 46, he has been fishing 36 years for a living.

An average day's work at sea lasts 18 hours, but sometimes runs into 24 hours:

When the fish are running they have to be taken off the trawl, gutted and stowed on ice in the hold.

Time is all important; sleep means least of all.

Muscles may be screaming for rest but almost mechanically the work goes on with perhaps 15 minutes off for meals.

Levy works alongside the crew; and is mate, bos'n, engineer, navigator and counsellor.

Lunenburg Boy

Warren, a Lunenburg boy, managed to pick up a Grade 3 education before he was shipped out as a throater aboard the celebrated Bluenose, with skipper Angus Walters.

He was 10 and too small for a dory. His job was to work on deck slitting the fish with a razor edged knife.

Levy graduated from the lowly throater's job to a dory and a man's pay when he was 16.

His schooner was the Mahaska. A few weeks later while anchored on the banks at night she was run down by a French beam trawler.

The schooner split open like a sardine can, sank so fast that the crew, asleep in the foc's'l barely had time to pull their braces over their shoulders and scramble for the deck.

Two of the men were drowned.

Warren Levy is thinking of building a new boat.

It will be the culmination of all his experiences.

Instead of wood he wants a steel hull about 75 ft. long, with a walk-in refrigerator to store bait, ice and if necessary fish.

Levy believes the refrigerator will cut down on bait bills by several thousand dollars each year and will reduce ice loss.

Right now, the dream boat is still a dream, but no doubt by about 1960 it will be a reality.

The cost? Perhaps $60,000 when fitted for sea. But it will make bigger catches, and earn more money.

EUROPE LOOKS AT CANADA

Our Economic 'Pause' Won't Last Very Long

"Unless there were to be an unexpectedly sharp decline in resource development in Canada, the present pause is not likely to be too prolonged."

That is the opinion of the Organization for European Economic Co-operation, in a study on Canada prepared in November and just published.

Here is the text of OEEC's conclusions:

In recent months, while prices have continued to increase, the danger of demand-induced inflation seems to have receded.

The development of productive capital in certain industrial sectors appears to have out-run growth of demand, and selective inventory adjustments have contributed to some indications of weakness.

The mining sector is suffering from the effects of the recent slump in non-ferrous metal prices, wheat sales have been lagging as a result of better crop prospects in Europe and increased competition in world markets.

The buoyant petroleum industry has been affected by the renewed importance of imports to North America from the Middle East, with the re-opening of the Suez Canal.

At home, the sharp decline in demand for houses has not been fully offset by the high level of non-residential construction and industries producing building materials, such as lumber and cement, appear to be temporarily over-expanded.

The consumers' durable goods industries are also experiencing sluggish sales and a number of manufacturing sectors may shortly be meeting stronger foreign competition, as in the 1954 recession.

Some of these changes reflect the restraining influence of monetary policy which has been designed to check expansion in certain industrial sectors before more serious excess could develop.

Monetary Policy

Throughout the period when inflationary pressures were developing, the Canadian authorities made very effective use of monetary policy.

The effectiveness of this weapon was, under the prevailing circumstances in Canada, enhanced by the existence of a floating exchange rate.

A tightening of monetary conditions not only served to restrain investment and to encourage internal savings but, by attracting foreign capital, contributed to the appreciation of the Canadian dollar and thus helped directly to stabilize internal prices.

The increase in imports financed by the capital inflow provided a significant supplement to domestic resources.

In this way, policies designed to restrain excessive internal demand also brought about an automatic financing of the foreign trade deficit.

Resource Development

Unless there were to be an unexpectedly sharp decline in resource development in Canada, the present pause is not likely to be too prolonged.

In considering whether some change in monetary and fiscal restraints may become necessary, the authorities will have to take into account the need to avoid an aggravation of the upward movement in costs and prices.

On the other hand, the present indications are that cost pressures are moderating and that demand may not expand sufficiently to avoid further cutbacks in certain sectors, with the possibility of a more marked rise in unemployment.

The outlook is to an important extent affected by the uncertainty of further immediate expansion in the U. S.

If present areas of weakness become too pronounced and widespread, the Canadian authorities may find it desirable to relax monetary and fiscal restraints to some extent.

Foreign Exchange

The large balance of payments deficit has been financed to a significant extent by a long-term capital inflow, particularly in the form of portfolio investment.

This has provided an important supplement of both physical and financial resources to the high levels of real domestic savings, and has facilitated a rapid rate of development.

The premium on the Canadian dollar recently experienced reflects the favorable attitude taken toward investment in Canada by residents of other countries as well as the relative tightness of monetary conditions in Canada.

An easing of those conditions might be associated with a smaller capital inflow.

But with the present strength of the Canadian currency and substantial reserves, the authorities are able to adjust policy to domestic requirements without undue apprehension about the foreign exchange position.

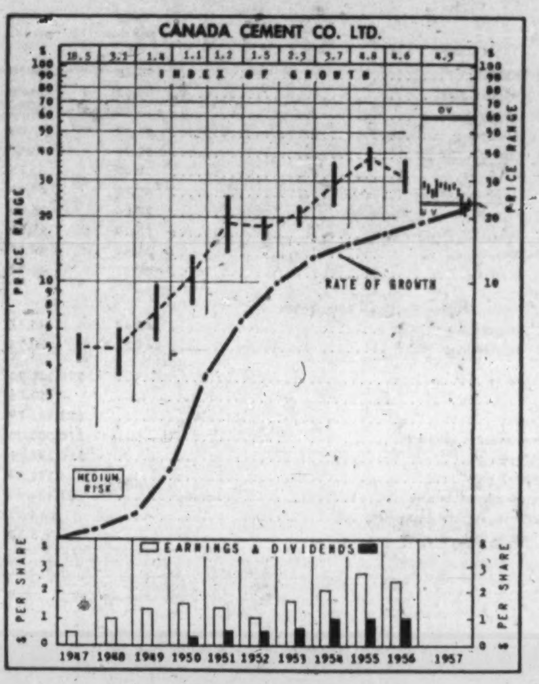
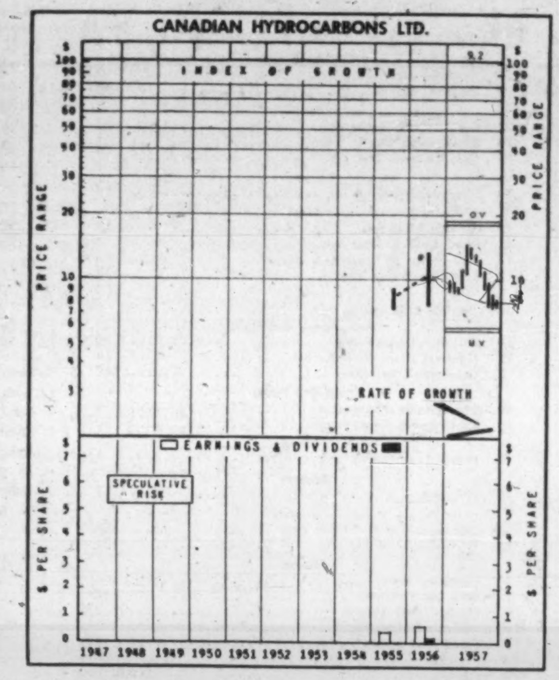
Selected Growth Stocks

This exclusive FP series of Selected Growth Stocks was chosen by one of the continent's most prominent and successful investment advisers. The reasons for choice shown below the accompanying charts were those given when stocks were chosen in January 1953. Each will be reviewed quarterly. This series in FP does not constitute a recommendation to buy these stocks.

— Quarterly Report —

By NESTOR





Canada Cement

Canada Cement Co., trading at recent $25, is 39% above UV level ($18), has room to rise 136% to reach OV level ($59). Price is 9.2 times '56 earnings of $2.62 per share. At indicated annual dividend rate of $1 per share, yield is 4.0%. Price in 1957-58 has ranged between a high of $30½ and a low of $24½.

Results for 1957, expected later this month, should be similar to those in 1956.

The country's largest cement-maker, Canada Cement at year end had an installed annual capacity of 24 million bbl.

Company's expansion program, which in the postwar period doubled capacity at a cost of $100 million, is now complete. No further expansions are under consideration.

Last spring, company put into operation a second kiln at its Woodstock, Ont., plant, increasing capacity by 1.5 million bbl. annually. In the Montreal East plant new grinding facilities are being installed to increase efficiency.

Sales in 1957 have been satisfactory and prospects for this year are considered "reasonably optimistic." Although 1958 is the last major pouring year on the St. Lawrence Seaway, there are a number of big industrial and hydro-electric projects under development or on drawing boards.

This industry is also hopeful of deriving impetus from highway construction programs. With cement now in free supply, a larger amount is being used in road-building. It is felt that the present level of unemployment may lead to more road-building in Canada in 1958. This is the current trend in the U. S.

In the Montreal area alone, the cross-island metropolitan boulevard and the Laurentian toll highway will both be major cement users.

The industry is also looking for a renewed spurt of home construction spurred by the Federal government's recent easing of home-building loans.

While no major price increases are forecast, it is likely that prices will follow the present upward trend in costs.

Total Canadian cement shipments in the first nine months of 1957, at 4.7 million tons, were up 22% from 3.8 million tons shipped in the corresponding period of 1956. Total for the whole of 1956 was five million tons.

Some of the increase is due to abnormally high cement shipments to the U. S. during the strikes in the cement industry there.

CANADA CEMENT — Aside from the more immediate benefits from building of the St. Lawrence Seaway, demand for cement, in keeping with the upward trend in general construction, is expected to be forward over the years ahead. Canada Cement, already holding a dominant position in its industry, promises to continue the progressive gain in earnings and asset values it has made in the postwar period.

Canadian Hydrocarbons

Canadian Hydrocarbons Ltd., at recent market price of $7, is 17% above UV level ($6), could rise 157% before reaching OV level ($18). Price is 13.7 times 1956 earnings of 51c a share. Price in 1957-58 has ranged between a high of $15 and a low of $6⅞.

Sales in 1957 are believed to have been about the same as 1956. Earnings per share have been below earlier expectations, probably 45-50c vs. 51c in 1956.

There is no dividend for 1957. The rate in 1956 was 12½c.

The company has been undergoing considerable reorganization in the last few weeks. The president, W. F. Davey, resigned Nov. 13. No new president has been appointed yet.

A full-time general manager has been appointed to take over the marketing operation in Saskatchewan. He was formerly sales manager of **Sturdie Propane Ltd.**, Calgary, a wholly owned subsidiary.

Saskatchewan is regarded as the area with the greatest sales potential in the company's territory. There are 116,000 farms not yet served with propane. There are also estimated to be 106,000 tractors, of which only 178 are using propane as a fuel.

At present, propane for tractor use is being sold at about the same price per gallon as gasoline, yet it allows fewer miles per gallon. The company does not expect a major boost in sales in this field until local supplies are sufficient to bring the price down to 7c or 8c below gasoline.

In some areas of the U. S., propane-powered tractors are accounting for 25% of total tractor sales.

The company is not anticipating any substantial increase in supplies of propane during 1958, apart from some four million gallons expected from Fort St. John. This will increase sales by about 15%.

The Fort St. John supplies will be marketed in the Peace River district. Edmonton production, which is the least expensive (at 5¾c gal.) will be used to extend the company's sales area further east.

Supplies from Fort St. John will, however, make it unnecessary to go on importing Louisiana propane. Cost from this source, delivered in southern Saskatchewan, is 23c gal.

The company is looking forward to achieving major increases in sales and profits when plentiful supplies are available. A number of new Canadian processing plants are due to come on stream in 1959.

CANADIAN HYDROCARBONS—Company is in expanding phase, distributing propane throughout the West, from Lakehead to the Rockies. Long-range plans incorporate an endeavor to develop a pipeline to transmit propane, butane, raw gasoline and refinery products from Alberta to Eastern Canada, in which Canadian Hydrocarbons would have substantial interest.

How to Read Nestor's Special Stock Charts

INDEX OF GROWTH: The rate at which the value of the equity behind the stock is doubling as determined by the growth rate at which it entered the year. A figure of 5.6 for the present year would indicate that at its current growth rate the equity value is doubling every 5.6 years.

PRICE RANGE: The annual high, low and mean price. Monthly ranges for the current year.

UNDERVALUATION AND OVERVALUATION PRICE LEVELS: Shown by the narrow horizontal lines above and below the stock's price range indicating price at which the particular stock is adjusted as underestimating or overestimating its future rate of growth. A stock showing a fast-growth rate will sometimes anticipate growth by two or three years. In this case it may not be so attractive a purchase relatively as some other fast-growing stock that is not anticipating its growth beyond the immediate present. Other factors such as rate of growth and investment quality will also enter into the comparison an investor will want to make.

Without these UV and OV levels a current quotation of say, 55 or 75 would carry no significance regarding long-range value. The UV/OV levels also permit judgment as between one stock and another. They are not designated points of purchase or sale nor do they attempt to show what will be a stock's bottom or top figures in any given year.

RATE OF GROWTH: The rate as based on Nestor's tests at which the company is showing underlying or long-term growth. This will determine the price trend of the company's common stock over a period of years and in most instances the trend of dividend payments.

**Background and principles behind the selection by Nestor were discussed in a special article in FP, Jan. 10, 1953. A limited number of reprints are available on request.*

Company Reports

To assist readers in appraising and comparing company financial statements, The Financial Post has a uniform method of presenting corporation accounts. Variations from the companies' published reports are footnoted.

Coal

COLEMAN COLLIERIES LTD., Coleman, Alta., net profit was $1,975 for year ended June 30, 1957, compared with previous fiscal year's $5,963. These net profits were equal in each case to the net loss for the year on disposal of fixed assets. Company's report showed no profit in either year.

Sales of coal to railways continued to decline, says President F. J. Harquail.

Profits on coal mining operations before provision for depreciation, depletion, and bond interest amounted to $323,953. Because of steadily declining coal markets, the entire amount was appropriated to write down investment in an open pit coal mining operation.

As a result of this write-down, valuation of $215,768 on a substantial body of coal from which the overburden has been removed is now a nominal one. Company anticipates this coal will be sold in an orderly manner over a period of time at a considerable profit.

Company entered into the general construction business, including construction of highways and bridges, and erection of steel, etc. Operations resulted in a profit of $315,410. Investment in construction equipment such as shovels, trucks, bulldozers, etc. has replacement value of $1.4 million, an increase of $300,000 over past year. Construction operations are being carried on in a normal manner and at a profit.

Operations of the subsidiary not included in consolidated statement have resulted in neither profit nor a loss.

Textiles

FIBRE PRODUCTS OF CANADA LTD., Brantford, Ont., net loss was $72,490 for year ended June 30, 1957, compared with net loss of $20,595 for previous fiscal year.

To broaden operations, a new line of plasticized jute was introduced, says President Samuel J. Zacks. New equipment which proved costly had to be built, and the product after considerable experimentation was put on a satisfactory production basis.

In order to bolster the working capital position, a mortgage of $76,800 was obtained from **Canada Life Assurance Co.** on the old Windsor property. This property is 90% rented and after depreciation of $7,297 on building and $534 on equipment showed an operating profit of $8,296.

The automobile industry had a difficult year and company working as a supplier shared this industry's problems. A substantial loss was suffered owing to heavy write-offs. This was partly set off by listing of inventory repair parts of $49,468 which were valued at lower of cost or market. Competition has been very keen.

Company is endeavoring to further diversify. Repayments of mortgage on Brantford property may permit some new financing next year to improve liquid position.

Annual meeting is Jan. 27.

The Changes and the Gains

Compton's account shows the following changes:

— **A capital gain** of $18,234 on the original $10,000 (DBS common stock index up about 180%).

— **A capital loss** of $7,459 or 20.9% in the last year (DBS index down about 18½%).

— **A gain in annual income** of $1,141 or 289.6% over the 13-year period, but a slight loss over the past year ($1,535 indicated now against $1,543 at the end of 1956 and $394 originally).

— **An income return** of 15.35% on the original investment and 5.43% on the current market value.

— **A decrease in mining stocks** to 16.8% of the portfolio's market value (51.6% a year earlier).

— **An addition of four new stocks**, and elimination of one, raising number of companies represented from 10 to 13.

Here is the distribution of the account:

MARKET VALUE (at mid-December each year)

	1957		1956		1949		1944	
	$	%	$	%	$	%	$	%

Total	28,234	100	35,693	100	16,114	100	10,000	100

MacNab's account shows the following changes:

— A capital gain of $20,856 or 208% (DBS common stock index up about 180%) since Dec. 15, 1944.

— A capital loss of $4,569 or 12.99% over the past year (DBS index down about 18½%).

— A gain in annual income of $1,184 or 267.8% in the 13-year period and an increase of $96 or 6.3% in the past year ($1,626 now in prospect against $1,530 a year ago and $442 originally).

— An income return of 16.26% on the original investment and 5.27% on the current market value.

—A larger percentage in bonds (7.1% of the portfolio vs. 5.4% a year ago).

— A drop in preferred stock holdings (5.6% vs. 8.1% a year ago).

— An addition of three new securities and elimination of three. Number of companies represented stands at 20.

Here is the distribution of the account:

Principles: How the Accounts Work

The Compton and MacNab accounts are under the direction of two anonymous investment managers, carefully selected because of their high standing in the investment community, their integrity and their training.

Using a definite investment plan of his own — changed occasionally to meet changing conditions — each manager recommends buying and selling as if he were managing the portfolio of an actual client. FP assumes no responsibility for these recommendations.

Investment is a personal matter. A good investment policy for one person may be unsound for another person in another situation.

A tailor-made policy offers the investor the greatest chance of financial success.

To make Managed Investment as realistic and as valuable as possible, the two hypothetical clients, Compton and MacNab, were carefully described 13 years ago:

Compton was 38, married, had two children but no dependent relatives. His objective was divided about equally between capital appreciation and income.

MacNab was 57, married, with his wife as his only dependent. His objective was maximum income consistent with safety of capital.

It was assumed that each person owned his house, had substantial life insurance by 1944 standards, and a backlog of Victory Bonds and War Savings Certificates.

Compton's and MacNab's managers advise FP of any transactions as soon as they are made. Therefore, it is not possible for the transactions to be the result of hindsight although, for mechanical reasons, the transactions may not be reported in FP until a week or more later.

Managed Investment is designed to illustrate, by actual example, the principles of sound investing based on experience, knowledge and constant attention.

Purchase or sale of any stock should not be interpreted as a recommendation that other investors should take similar action.

Market Comment

What stocks and bonds are doing and what prominent observers say

Is this week's spirited market performance more in the nature of the long-awaited year-end rally or does it represent some recently brightening developments on the business and/or political front?

So far most market analysts are playing it "cautious" and calling it a technical upturn that is not likely to get very far. No sustained market upturn can get under way—they claim—until there are more clearcut evidences of a general pick-up in orders in many business lines.

The sudden spurt in gas pipeline shares this week was accompanied by varying rumors; the most persistent: that Prime Minister Diefenbaker was planning an early statement on the gas export situation.

* * *

RICHARD LOCKE; Leggat, Bell, Gouinlock Ltd. (Montreal)

The stock market continues its desultory performance, reflecting a myriad of unfavorable trends evident throughout most industries and in the majority of economic indicators. It is a truism that all stocks do not rise or fall simultaneously nor do they all fluctuate to the same extent, so that a closer look at individual industries seems warranted.

Base Metals: The near collapse of the price structures of the trinity metals recently has revealed to investors the international excesses which have existed for some time. It appears, however, that almost all unfavorable factors have been adequately discounted in the prices of many copper and nickel producers. The outlook for lead and zinc is still rather nebulous at this time.

Forest Industries: The short term picture for newsprint is clouded by temporary over-supply, increasing costs, and to a lesser degree, the premium on the U. S. dollar; lumber markets have deteriorated because of weakness in housing starts here, in the U. S. and the U. K. The decline in paper stocks has ranged from 40% to 60%, and many of these equities appear to be in a buying range for the intermediate and longer terms.

Oil & Gas: The major proportion of Canadian producers are faced with the prospects of shrinking allowables, decreasing U. S. imports, distress tanker shipments from abroad, and domestic marketing difficulties. Although the longer range outlook is still attractive, the problems are such that immediate commitments could safely be deferred until more definite trends assert themselves.

Natural Gas: The impressive future for the industry in general remains unchanged in spite of the rumblings in Ottawa; with much of the speculative padding removed from the prices of many securities, positions could be taken in some of the better producers and carriers.

Steel: Demand for steel and steel products continues to show pronounced weakness and major producers are not expected to record any significant gains in earnings this year. Few of the equities in this group have much attraction at the present.

Others: The near, medium and long-term outlook for banks, public utilities and merchandising, brewing, distilling, tobacco and similar industries continues to be good, and some commitments, particularly in the utilities and banks, seem singularly appropriate at present levels.

For the patient investor, the prevalent level of equity prices offers interesting possibilities. Although the present state of economic affairs is not particularly exciting, it is unquestionably temporary. As the news improves and investor confidence strengthens, a new base will be laid for another prolonged upsurge in common stock prices. In spite of what many investment advisory services would have us believe, there is no known device for ascertaining "the bottom."

In the interim, the bond market offers many lucrative compromises, particularly in the more reasonably priced convertible issues, for those investors awaiting the emergence of more positive economic trends.

* * *

J. B. HOW; G. H. Rennie & Co. (Toronto)

Many financial writers agree that Canada is now in a period of adjustment, which may continue for a few months but out of which will emerge a further important period of prosperity.

Canadians have become so used to sustained progress in the postwar years that even a brief period of lessened activity produces unwarranted pessimism.

Look at the facts: Canada possesses all of the elements for a prosperous future and is capable of surmounting the obstacles which now temporarily retard her progress.

"If winter comes, can spring be far behind?"

The present financial climate may be somewhat severe but spring will surely return and investors who use the present opportunity to add to their holdings in successful Canadian companies will be rewarded. The shares of many of these successful companies are now selling at prices which ensure not only an adequate interest return but contain also great growth potential.

A moderate program of investment at present price levels, with reserve buying power, should prove profitable.

Mack Truck is Expanding Gaskin Switches From S-P

Mack Trucks of Canada Ltd. this week announced long-term plans for manufacturing in Canada. The company is a wholly owned subsidiary of **Mack Truck Co.**, Plainfield, N.J.

D. C. Gaskin, formerly president of **Studebaker-Packard of Canada Ltd.**, has been appointed executive vice-president of Mack Trucks of Canada. He will direct the company's major expansion program.

Main details of the program:

- Expenditure of $3 million in 1958 for new executive offices in Toronto, new sales and service centres in Winnipeg and Regina.
- Construction of an assembly plant at Three Rivers, Que.

Land for this has already been purchased.

Mack Trucks of Canada claims a 54% share of Canada's market for heavy-duty diesel trucks.

Sales have grown from $2 million in 1947 to a current average of $20 million a year. The Canadian company has been here 37 years.

Total sales of the U. S. parent company last year were $201 million.

There are no plans yet to offer shares in the Canadian company. This move will be made when it "is justified from the investors' side," company officials state.

Dosco Coal Output Dips

From Our Own Correspondent

HALIFAX — Some 5,254,494 tons of coal were produced by **Dosco** coal mines in N.S. during 1957.

This was only 31,811 tons less than in 1956, despite closing of several operations including No. 4 mine in Springhill where an explosion in November, 1956, claimed 39 lives.

Of the 5,254,494 tons produced, Dosco mines yielded 3,920,485 tons (229,757 more than in the previous year), **Cumberland Railway and Coal Co.** pits produced 384,886, **Old Sydney Collieries Ltd.** mines produced 758,467, and **Acadia Coal Co.** mines produced 190,656.

Dosco's No. 12 marked its biggest production year with 768,448 tons.

The company's No. 20 and No. 26 followed closely with 766,656 and 764,071.

Company Report

To assist readers in appraising and comparing company financial statements, The Financial Post has a uniform method of presenting corporation accounts. Variations from the companies' published reports are footnoted.

Publishing

SUN PUBLISHING CO., Vancouver, consolidated net profit of $840,307 for the year ended Aug. 31, 1957, was 11.6% lower than the previous fiscal year's $950,407.

Profit does not include an allowance for depreciation on assets of "The Vancouver Sun" transferred to **Pacific Press Ltd.**, but does include operating revenues from the Vancouver Sun up to June 13, 1957.

There was a further profit in 1957 of $222,120 from sale of the commercial printing and lithographing division of the company (Sunprinting), says President Donald Cromie.

In May, company and **Southam Co.** agreed the two Vancouver newspapers The Vancouver Sun and The Province would be produced by Pacific Press Ltd. owned equally by the two parties and incorporated for this purpose.

Certain assets of the Vancouver Sun were transferred to Pacific Press which assumed liability for the Sun's outstanding bonds and debentures. The Sun received $8.5 million in the form of 800,000 Pacific Press common shares, $1 par and $7.7 million 5½% redeemable debentures. Sun immediately sold half of these debentures to Southam Co. for $3,850,000.

Company under agreement with Pacific Press Ltd. continues to be responsible for publishing the Vancouver Sun and is solely responsible for the editorial, advertising and circulation departments.

Average net paid circulation in August 1957 was 209,666, an increase of slightly over 10% over the same month a year earlier. The Sun reaches an estimated 75% of the homes in Greater Vancouver.

Total advertising was a record at 28 1/3 million lines, up 4% over 1956. Advertising rates were adjusted in April and in July.

Transition of the Garden Grove News, published semi-weekly, to The Daily News (Aug. 31 circulation 13,600) was completed. The loss incurred by this move was $132,994. Company anticipates a small profit in 1957-58 after full payment of interest on advances.

Fiscal year end of **Standard Broadcasting Co.** has been changed from June 30 to Aug. 31. This subsidiary had higher net revenues and profits. It is capitalizing $65,000 bank loan and shareholders' advance of $29,000 by issue of preferred shares to parent company.

Grouse Mountain Resorts Ltd., operating results have not permitted any repayment of principal or interest on advances from company.

Graphic Arts Building was retained as a real estate investment following the sale of Sunprinting and revenue of $30,600 after full allowance for depreciation is included with parent company's revenues. Company is considering converting this industrial property to first class office space and adding three stories and parking facilities.

Company deducted $180,000 from retained earnings account for decline in market value of portfolio of preferred and common shares. Maturing short-term investments were replaced by Government of Canada bonds.

"in continuous change"

Investment is a difficult art because of the circumstances surrounding it. The field of operations is moving—in continuous change; market action is directed not so much to the known past as to an unknown future. Security, income and capital gain can best be obtained by careful selection, diversification and constant supervision.

Perhaps we could be of help to you . . .

Beverages

JOHN LABATT LTD., London, Ont., consolidated net profit of $2,605,703 for year ended Sept. 30, 1957, was 10% higher than previous fiscal year's $2,371,341.

Sales volume was higher in major markets, due to more favorable weather, increased population and continued prosperity, says President W. H. R. Jarvis.

Government's action in Manitoba reduced prices paid brewers by the government Liquor Control Commission. Such action must be approved by the Municipal and Public Utility Board before becoming effective. Company with others is protesting this action on the grounds it is not a public utility.

In Ontario a substantial increase in the provincial gallonage tax was made, but company was allowed to increase price for bottled beer. Prices received by brewers for sales through licensed outlets was unchanged.

In Quebec a modest increase in retail and wholesale prices was approved.

In Manitoba, company's market position improved despite competition.

In Ontario regular gains were achieved and also in Quebec.

Sales in other provinces increased, and exports to the U.S. showed steady gains. Company's products are now available in Bermuda and some of the British West Indies.

Increased profits were caused by increased sales, economies and improved plant efficiency. Transportation savings resulted from supplying eastern Ontario and the Maritimes from Montreal, and improved operating efficiency of the Ontario truck fleet. Offsetting factors were loss of revenue from Manitoba price reduction and increased costs.

A number of minor capital expenditures were made for more economical handling of packaged beer at London plant, a garage building at Montreal brewery, and installation of new machinery.

Company has installed yeast drying equipment at London. Dried yeast, in addition to dried grains, is now marketed in agricultural feed field.

The board of directors was increased by three.

Company had 5,810 shareholders at Sept. 30, 1957.

Annual meeting is Jan. 17.

ANNOUNCEMENT

GREAT NORTHERN GAS APPOINTMENTS

S. REESOR KAUFMAN, C.A.

Charles E. Garnett, P.Eng., Chairman of the Board of Directors of Great Northern Gas Utilities Ltd., announces the appointment of Mr. S. Reesor Kaufman, C.A., as Vice-President and General Manager of the Company, succeeding Mr. F. J. Simington who has resigned as General Manager and Director, and who will be succeeded on the Board by Mr. David B. Mansur, President of Consolidated Toronto Development Corporation and formerly President of Central Mortgage and Housing Corporation. Mr. Garnett also announces with regret that Mr. Walter F. Thorn has resigned from the Board on account of ill health and Mr. Carman G. King, a director of Gairdner & Co. Ltd. has been appointed in his place to the Board.

Mr. Garnett also announces the appointment of Mr. Eric Sherwood, P.Eng., as Vice-President — Engineering of Great Northern Gas Utilities Ltd. and Mr. D. Ross McRae and Mr. Patrick H. Bibby as Vice-Presidents of two subsidiary companies, Rockgas Propane Ltd. and Bibby's Pacific Propane Ltd.

The Board of Great Northern Gas Utilities Ltd. now consists of Charles E. Garnett, P.Eng., L. Sanford Reis, Alan T. Christie, David B. Mansur, Bruce V. Massie, Q.C., Carman G. King and Roland O. Bull. The Principal officers are Charles E. Garnett, Chairman; L. Sanford Reis, President; S. Reesor Kaufman, Vice-President and General Manager, and Eric Sherwood, Vice-President — Engineering.

ANNOUNCEMENT

Mr. C. W. Michel, President of Dome Mines Limited, announces that Dr. W. F. James has been elected a Director of the Company, effective January 1st.

Dr. James replaced Mr. J. H. Stovel, who has retired as Director and Vice-President but will continue as Consultant. Dr. James is a prominent Canadian Consulting Geologist of the firm of W. F. James and B. S. W. Buffam. He is a Director of many mining companies, including Campbell Red Lake Mines Limited and Falconbridge Nickel Mines Limited, and serves as a Consultant for several mining companies.

Lowlands Play Still in Gear But Winter Program Slackens

Some oil and gas interests are in the field, others are on the sidelines.

That's the picture in the St. Lawrence lowlands where natural gas exploration has been bowling along over the past year.

A series of disappointing drill ventures — following Quebec's first big gas discovery last spring — is taking some steam out of the lowlands drive.

But so far, most companies are staying with the play, convinced that there's gas to be found in commercial quantities. However, several firms are curtailing field activities and pausing to reassess results of 1957.

Big incentive in the area is the substantial wellhead price which an operator would command for natural gas.

Direction the search would take depended to a large extent on the drilling program of **Bald Mountain Oil Co.** which made the big find near Three Rivers last March.

The program was disappointing. Coupled with generally reduced exploration throughout the oil and gas industry, it has sharply affected 1958 plans for the lowlands.

But geological opinion is still strong that the area holds good promise for further discoveries.

No Pull-out

Exploration plans could change sharply. There is still some field activity, and any success could spark another drive to find gas. A general industry upswing in exploration would also spur work in the lowlands.

"We are certainly not pulling out of the lowlands. The possibilities here still justify further work," an **Imperial Oil** official told **FP**.

Last year, about 30 or more companies had varying interests in the lowlands — an area lying along the St. Lawrence from Montreal to Quebec City, and extending south along the Richelieu River.

A substantial part of 1957 drilling was shallow. Many of these shallow test holes can be drilled to greater depths if necessary.

Bald Mountain Oil drilled 15 wells in the last 15 months, totalling 26,425 ft. in depth.

The company's Louiseville No. 2 well, where there have been some gas showings, was recently at 1,120 ft. Drilling was to be resumed shortly.

Another hole, La Perade No. 2, is at 150 ft. with drilling scheduled to be resumed soon, according to the company. Gas zone, encountered at 120 ft., "did not develop substantial volume."

Bald Mountain officials say the company and associates plan to continue drilling through the winter both in the lowlands and in the Gaspe Peninsula.

The Bald Mountain group has so far drilled 28 wells in Quebec to combined depth of 74,790 ft.

It was a Bald Mountain well, 12 miles east of Three Rivers, which sparked renewed lowland interest in March last year. The well reportedly tested at over three million cu. ft. daily.

Drilling in the discovery area proved disappointing, but Bald Mountain kept up a lively exploration pace through the year. Company recently had spent over $400,000 in field work since mid-1956.

Study Results

Major operator, Imperial Oil, is carrying on search through a wholly owned subsidiary, **Lowlands Exploration.**

Gravitymeter and geological surveys, shallow test drilling and exploratory drilling have been carried out, with interest centring chiefly in the Yamaska-Pierreville and Nicolet areas.

Imperial has drilled six wells in the lowlands. Although gas showings have been obtained, there have been no commercial finds.

Imperial is now assembling results of its program to reassess its position.

Field activity has been curtailed in keeping with an overall policy of reduced exploration. But the company says it will remain in the lowlands picture.

Quonto Petroleums, successor to **Oil Selections,** has a tentative deep drilling program involving 10 locations.

Company is manager-operator for **Okalta Oils** and **Oilmont Petroleums** in the area.

Seaway Gas & Oil has carried out surveys and test drilling on its concession around Three Rivers. Several of these shallow holes have surface casings set, so that drilling could be resumed to greater depth.

The company has said it anticipates a deep drilling program on the basis of preliminary results.

Eastern Canada Gas & Oil has been awaiting results from other companies' exploration in the area.

This decision followed the abandoning of No. 5 well in the St. Johns district where company holds a concession. Eastern Canada has not been active in a major way since last March.

Mineral Output

	1956 Vol. 000	1956 $ 000	1957 Vol. 000	1957 $ 000
Copper (lb.)	709,750	292,958	692,053	199,543

Minerals Top $2.1 Billion Uranium Up, Base Metals Down

Canada's mineral production in 1957 is estimated at $2,133,941,087, a 2.5% rise over 1956, according to a preliminary report by the Dominion Bureau of Statistics.

Uranium oxide output soared by 185% to nearly $131 million while copper, lead and zinc combined value dropped by $125 million.

Crude petroleum maintained its top rank position with a 9% rise from 1956, while nickel displaced copper in second spot.

Value of metal production alone showed a slight decline from $1,146 million in 1956 to $1,136 million last year. Totals for non-metallics, fuels and structural materials all showed increases over the previous year.

New uranium mines, coming into production in 1957, helped nearly triple uranium output value. Quebec's iron ore shipments were up but lower shipments from Ontario mines offset the gains, leaving little change between the two years.

Gold output was higher by volume but the high premium on Canadian funds sliced into prices received by the mines. Average gold price through the year was $33.54 per oz.

In non-metallics, asbestos registered a gain from $99.8 million to $106.3 million.

Among the provinces, Ontario maintained a substantial lead with output accounting for 34.6% of Canada's total. Alberta was second with 19.3%, Quebec third with 18%.

Dome Ex. Spuds Wildcat Well

Dome Exploration (Western) has spudded a wildcat 21 miles northwest of the nearest potential gas production in the Nig Creek Triassic gasfield in northeastern B.C.

Dome acquired a 50,755-acre permit from **Basco Oil & Gas** of which Basco retains a 25% net carried interest.

N.B. CONTRACT SIGNED

From Our Own Correspondent

FREDERICTON — A Canadian Shipping Federation offer of an 8c per hr. wage hike has been accepted by the Shipliners Local 1039.

Voted at Saint John, the new scale boosts the members' hourly pay to $2.15, including 23c pension and sick benefits. The local originally asked for a 13c per hr. increase.

Following meetings with federal labor officials, the union dropped its demand to 10c and the federation countered with the 8c offer.

ANNOUNCEMENT

PEACE RIVER GLASS APPOINTMENT

GORDON C. DOW

W. H. W. Schuller, President, is pleased to announce the appointment of Gordon C. Dow as General Sales Manager of Peace River Glass Company, Fort Saskatchewan, Alberta; manufacturers of Glass Pipe Wrap, Glass Pipe Covering and Glass Roofing materials. The Peace River Glass Company is associated with Regina Glass Fibre Ltd.; England; Glaswerke Schuller G.M.B.H.; Germany; and American Glass Fibres Inc., of the United States.

Oil

CHARTER OIL CO. had net loss of $436,210 in the year ended July 31, 1957, compared with net loss of $224,198 the previous year.

Since the fiscal year end, working capital has been increased by proceeds from a debenture issue, President Ralph K. Farris says. Marketable value of securities at July 31 was $1.4 million higher than that shown in the balance sheet, he points out.

A net profit of $52,770 was earned by **Charter Drilling Co.** in the year. Drilling activity in western Canada has dropped but Charter recently had two of three rigs employed in the field.

The company's oil production in the fiscal year amounted to 63,247 bbl., down from 78,511 bbl. the previous year, Mr. Farris says.

This reflects the shutdown of four wells in the Redwater and one in Joarcam, and a reduction in production allowables.

This year, reductions in allowables at Redwater should be more than offset by wells at Youngstown now producing at a 43,000-bbl. net annual rate to Charter, he reports.

Charter has varying interests in 2.8 million acres compared with 3.2 million in 1956 fiscal year. In the year, the company acquired 148,046 acres in the Eagle Plains area of the Yukon, allowing its interest in a block of land in the North West Territories to lapse.

At Youngstown, drilling has been suspended until next May when an appraisal of the production behavior of existing wells can be made, Mr. Farris says.

Eight wells were drilled at Youngstown during the year, of which five were successful. Charter owns three outright and has a half interest in the other two.

Mining

CASSIAR ASBESTOS CORP. had net profit of $2,811,295 equal to 74c a share in the year ended Sept. 30, 1957, an increase of over 25% from net profit of $2,225,088 equal to 59c per share in the previous year.

Further reductions in mining and milling costs are expected as development of the mining area and other improvements become effective, President F. M. Connell says.

The company will carry out a policy of exploration for asbestos in the northern B.C. and North West Territories area, he says.

Further work is planned on the three asbestos properties optioned from **Conwest Exploration Co.** during the year, Mr. Connell reports. Cassiar spent $229,398 on these prospects during the fiscal year.

The ore body on the Clinton Creek property is being developed by open cuts and two adits. Mill tests of the ore will be made this year.

Further efficiency is expected in trucking the company's products from Cassiar to Whitehorse by replacement of gasoline with diesel-powered units, Mr. Connell says.

At the mine, a new adit may be driven this year to explore the ore body about 200 ft. below the present adit level, General Manager J. D. Christian reports.

Sales volume this year should remain at the same level as last year, he says.

UNITED KENO HILL MINES, reflecting lower metal prices, reports a drop in net profit of 50% to $1,001,748 in the year ended Sept. 30, 1957, from $2,005,306 in the previous year.

Of the 159,885 tons treated in the mill, 78,774 tons were mined from the Hector; 70,604 tons from Calumet and 10,043 tons from exploration and development work in the Elsa mine, F. M. Connell, president, reports.

Value of ore produced from exploration development in the Elsa and Jock mines exceeded direct operating costs. Annual coal requirements will be reduced with installation of a 3,000 hp electrical generating unit at the Mayo power site.

OVER TWO HUNDRED RECOMMENDATIONS were offered which made or saved money for our readers during 1957. Among these were:

Stock	Approx. Buy Price	Approx. High Since Purchase	Approx. Advance
Perron Gold	$ .45	$ .88	95%
Stanleigh Uranium	3.70	6.40	72%
Britalta Oil	2.50	3.60	44%
Home "A"	13.00	23.75	82%
Dominion Glass	40.00	69.00	72%

These are only a few of the results arising from our analysis of conditions surrounding the market and individual stocks during the past year. Traders begin selling nickel when International was near $100, deploying profits into primary trading vehicles for fast gains as per Area going to near $1.80 within weeks following clients' purchase near 54c. In early Sept. when the uranium index was rising we said the group was headed for trouble over the near term — enabling our readers to move out of CONSOLIDATED DENISON near $19 and CAN-MET near $3.80 before the "hydrogen scare" carried uranium down. When gold was "doomed" our traders moved into EAST MALARTIC and MADSEN RED LAKE to realize up to 50% gains on short term buying and selling.

FROM THE SHORT SIDE Before oil difficulties became serious they shorted CONSOLIDATED WESTERN PETE near $10, NORTH CANADIAN near $5.50, MIDCON around $1.65, SCURRY-RAINBOW near $3.50 — then watched as these situations skidded from approximately fifty - seventy percent.

OVER 150 IMMEDIATE RECOMMENDATIONS Many experts believe 1958 will be an excellent trading and investment year for anyone making sound decisions. We agree and have started our clients off in the right direction by offering recommendations (in two special holiday bulletins) on over 150 situations we believe require close attention going into 1958 — suggesting whether to buy, sell, hold, or average down. The list includes stocks which should be shorted as well as ones we don't think will recover from present lows.

If you feel you didn't get the right results from your 1957 market activity, or feel you are not prepared for the new year, then possibly The Canadian Forecaster can help you. We'll start off by sending you our "immediate recommendation" bulletins (offer good only as long as present supply lasts). We'll follow this up with personal analysis of your Canadian "problem stocks" — the ones which have or may possibly cost you money — and give you our frank opinion on their future trading prospects. (There is no charge for this or other individual assistance we give our subscribers.)

Each week thereafter we'll send you our 8-page advisory bulletin which keeps you up to date on important developments in mining, oil, and industry, and on investment and speculative trends; explains in easy to understand language what affect these developments and trends will have on the market and individual stocks; and then suggests exactly what stocks to buy, when to sell, and explains why these moves should be made.

For a $5 trial subscription we believe we can show you why traders, speculators, and investors all over the world consider The Canadian Forecaster to be an invaluable aid to their activity in the Canadian stock market. Our annual fee is $35. Address The Canadian Forecaster, 231 Examiner Building, Calgary, Alberta, Canada. If you wish, you may include your "problem stocks" for analysis and opinion on future trading prospects.

Make sure you get all this newness in your new truck!

These handsome 1958 FARGO POWER-MASTERS introduce brand-new standards of cost-cutting performance...safer, easier operation... big-load strength... and style that does a public relations job for you, too!

This is newness that makes sense all the way. For example, Fargo's new high-performance V-8 engines. They're bigger, more powerful. Yet they're designed with exclusive Power-Dome combustion—to reach the most *economical* level of truck operation ever. You'll find Fargo Sixes thrifty and power-packed, too.

To match these work-horse engines, there are rugged new chassis components to permit bigger recommended loads, and bigger brakes for safer, quicker stops.

There's new prestige-building style, too, in the beautiful Sweptside 100 model and throughout the line—inside and outside. A new Fargo safety-centre steering wheel. A new Fargo dual headlamp system that casts light up to 75 feet farther for safer night-time hauls.

★ ★ ★

New Easy-Shift Manual Transmission or push-button LoadFlite automatic drive is available on light-duty Fargo models.

New on Sweptside 100, and standard D100 models—rear springs that automatically adjust tension to varying load weights. You get a smooth, passenger-car ride whether truck is loaded or empty.

New Sure-Grip Differential assures better traction, prevents wheelspin on ice or snow.

You get more of the future with

FARGO POWER-MASTERS

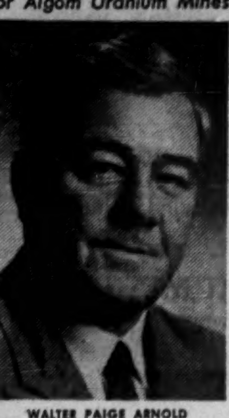
ANNOUNCEMENT

Managing Director Named For Algom Uranium Mines



WALTER PAIGE ARNOLD

who has been appointed as managing director of Algom Uranium Mines Limited.

Mr Arnold succeeds H. E. Nelems, who was recently promoted to the post of vice-president of the Rio Tinto Mining Company of Canada Limited in charge of operations for the Rio Tinto Group. Mr. Nelems continues as managing director of Northspan Uranium Mines Limited and Milliken Lake Uranium Mines Limited.

Born in Johannesburg, in 1909, and a graduate of Witwatersrand Technical College, Mr. Arnold more recently served as Manager of Freddies Consolidated Gold Mines Limited, Orange Free State. Previously, he was assistant general manager, Randfontein Estates Gold Mines Limited, Johannesburg.

Grade Up At Rayrock $67 a Ton

Production of **Rayrock Mines** for November and December — first two months of commercial output — amounted to $415,450 from 6,650 tons milled, President J. C. Byrne reports.

Average grade of ore milled was $67 per ton and indicated mill recovery was 97%. Estimated operating profit for the two months was $117,500.

In December, output was $219,450 from 3,484 tons milled. Grade was higher, averaging $70.50 a ton and recovery slightly higher at 97.1%.

Estimated operating profit after head office and bank interest charges was $67,500.

S. American Net Up 75%

South American Gold & Platinum had estimated net profit of $3,110,342 equal to $1.59 per share for the first nine months of 1957, an increase of 74.7% from net profit of $1,790,303 equal to 91c a share in the same period of 1956.

Sales of metals which had been temporarily suspended in the 3rd quarter pending clarification of certain Colombian export regulations were resumed in the 4th quarter, President L. B. Harder reports.

Figures for the nine months do not include earnings of Frontino Gold Mines which was acquired in 1956, he points out.

	9-Mos. 1957	9-Mos. 1956
Operating profit	$2,145,157	$1,930,221
Other income	2,064,671	691,400

Taking Stock

What's going on in the mining and oil markets — the facts and rumors.

By RAY MAGLADRY

Despite the downturn of oil and gas stocks in the last half of 1957, some issues are trading at the same or higher than early-1957 levels.

Strength is centred in companies in the exploration and development spotlight and in firms starting to benefit from gas deliveries.

Here's how some of these stocks have moved:

	Latest Price $	Early 1957 $	1957-58 High $	1957-58 Low $
Fargo	5.50	2.98	9.55	2.93
Home Oil B	15½	10⅞	23.25	10.50
Jupiter	2.25	1.87	3.90	1.65
Provo Gas	2.63	1.71	4.25	1.70
Security	4.35	3.60	8.75	3.60
United Oils	2.55	1.85	4.40	1.73
West Maygill	1.70	1.15	2.70	1.12
Western Naco	1.49	1.20	3.90	.70

• • • •

Western oil and gas stocks rebound strongly in general market rally that extends over a week into the New Year. Production figures, however, are not bright with Alberta output dipping to an average of 253,000 bbl. daily in last week of 1957. That's 41% below the same week at the end of 1956.

Street talk that Canada may permit natural gas exports sparks buying interest in gas stocks.

Conflicting rumors of results from Virginia Hills follow-up well by **Home Oil.** After a brief dip, Home Oil A climbs from $14⅞ to $16 in strong oil markets.

Home also drilling stepouts from its Edith Lake discovery well in the same area and plans to have five rigs operating shortly.

• • •

Some forecasters are still calling golds to set the pace in the first part of 1958. About a dozen gold stocks ended 1957 at higher than opening prices for the year.

Standouts include **Cochenour Willans** at $1.89 compared with 72c a year ago. Cochenour's exploration drive will take it to boundary of **Consolidated Marcus** property. Marcus, now 33c as against 23c in early 1957, has been reflecting the Cochenour interest.

Among other strong golds, **New Dickenson** trades at $2.05 up from an early-1957 price of $1.43, **Macassa Mines** up from $1.82 to a recent $2.56. Bright speculative spot is **Taurcanis Mines,** developing a NWT gold prospect, now at the 45c level compared with 35c a year ago. It swung between 28c and 55c last year.

• • •

Earnings per share of **Kerr-Addison Gold Mines** in 1957 are estimated at $1.10 by **Biggar & Crawford,** Toronto brokerage house. Net in 1956 was $1.05 a share, has climbed each year from a level of 70c a share in 1953. Kerr-Addison at $15⅜ compares with a recent $14¼ and an opening 1957 price of $16¾.

For first time, oil investment provides biggest revenue item for **O'Brien Gold Mines,** amounting to over $75,000 in year ended September 30 compared with $35,000 the previous year. O'Brien participates in **Home Oil** program through **Alminex Ltd.,** syndicate representing several mining companies. O'Brien at 51c compares with a recent level of 47c.

Upper Canada mildly firmer as company maps out underground development program on its gold property. The issue edges quietly from 55c to 65c.

• • •

Asbestos stocks are mildly higher, led by **Cassiar Asbestos Corp.** which reports a 25% rise in earnings to 74c per share for year ending September 30. Cassiar climbs to $6 from a recent $5, settles around $5.75.

Also attracting attention, **United Asbestos** moves to $5.70 from around $5.20, drops back to $5.60 and **Advocate Mines** bounces up sharply from $2.35 to $2.70.

• • •

Interest in columbium, particularly in U. S., appears to spark buying in **Coulee Lead & Zinc** and **Headway Red Lake** which jointly control a developing columbium prospect in the Oka, Que., area.

Officials report tests are still under way, with bulk continuous runs scheduled shortly, leading up to pilot plant stage. Coulee flips up from 35c to 49c, settles at 48c, and Headway follows in the same range, also settling at 48c.

Company Report

To assist readers in appraising and comparing company financial statements, The Financial Post has a uniform method of presenting corporation accounts. Variations from the companies' published reports are footnoted.

Mining

O'BRIEN GOLD MINES had a net profit of $28,949 in the year ended Sept. 30, 1957, compared with a loss of $78,181 in the previous year. The company's report showed a net of $35,715 in 1957 and a loss of $49,230 in 1956 including profit on sale of investments.

No write-off was made on the company's cost portion in participating in oil and gas ventures during the year. The report notes that if such write-offs had been made on the same basis as in previous years, charge to profit and loss would have amounted to approximately $248,700.

Participations were held in 108 producing oil wells, 11 producing gas wells and 23 capped gas wells. Net revenue of $75,537 from oil production is an increase of 110%, J. Barry O'Brien, president, comments. Company has 3% of **Home Oil's** interest in Virginia Hills-Swan Hills and Grizzly Mountain. **Alminex,** in which the company has a 10% interest, has started deliveries of gas from the Buffalo-Bindloss area.

Cleanup at the Cadillac property resulted in a net profit of $124,461 from sale of plant and buildings. Clean-up of gold will be completed this year.

MINING INVESTMENTS

Mines Face 2 Official Moves

Canada's mining industry is faced with two possibly major government moves — one by the U. S. and other domestic — that could have an important impact on operations.

1. For gold mines. Revised cost-aid legislation is expected to be introduced in the House of Commons next session.

2. Recommendations of the U. S. tariff commission covering duties on lead and zinc will likely be given to President Eisenhower sometime this month.

For Canada's gold mines, the news is expected to be good. Some improvement is expected in the Emergency Gold Mining Assistance Act. This could involve an increase in the rate of assistance which presently is:

—Two thirds of the amount by which the average cost of production of an ounce of gold exceeded $26.50. Maximum rate of assistance is $12.33 an ounce.

In addition, the gold mines seek a longer term in cost-aid. They argue that for good mining practice, the legislature should extend for a minimum of three years and preferably five years. Mines Minister Paul Comtois has announced a two-year extension with "other matters still under study."

For lead and zinc producers, the news could be bleak. Pressure has been heavy in the U. S. for substantial increases in barriers against foreign lead and zinc.

But, so far there is no definite word on what might be recommended by the U. S. Tariff Commission. And following these recommendations, a special sub-committee of the U. S. cabinet will consider the proposals before advising Eisenhower on implementation.

• • •

Klockner, Others Still Interested

German and U. S. steel interests are still interested in the potential output of **Aconic Mining's** iron sands property, a company report to shareholders says.

Klockner & Co., the West German firm which originally had a marketing-financing contract with Aconic, has said it would resume negotiations for a new contract, the Aconic report says.

The previous Klockner contract expired Aug. 31, shortly after Aconic stock plunged from $11 to $1 in one morning session on the Toronto Stock Exchange. The stock was later suspended from trading on the TSE.

Aconic has been advised to carry out further technical and economic studies of the property by a Cleveland iron ore concern which was called in to make a preliminary study, the report says.

• • •

Mosher Waits For Gold Upturn

Sinking of No. 1 development shaft at **Consolidated Mosher** Mines will permit exploration of three more levels below the known ore, President J. M. Cunningham-Dunlop says in the annual report for the year ended June 30.

The shaft was sunk 130 ft. to present depth of 2,530 ft. Further exploration will be carried out when gold mining conditions improve, he says.

Work at the Geraldton, Ont. area property was stopped last summer.

Underground drilling appeared to verify the westward continuation of the ore. Reserves are estimated at slightly over four million tons averaging .155 oz. gold per ton.

Current assets at June 30 were $550,830 including cash of $221,174, while current liabilities were $17,199.

• • •

Hold Stockpile For Better Prices

Temagami Mining Co. continued underground development work from July 1 to Sept. 30, first quarter of the company's current fiscal year, President N. B. Keevil says in a progress report to shareholders.

Development is proceeding on two levels with emphasis on chalcopyrite ore zones. The 400 level east drive is approaching the No. 4 ore zone while the 500 level west drive has opened a new vein of around 30% copper over a length of 75 ft., Mr. Keevil says.

The vein reaches widths of 3 ft. and averages 18 in. in drift length exposed, he says.

Working capital of company at Sept. 30 was $852,727.

The stockpile of high grade copper ore at the property is being held pending improvement in copper prices, Mr. Keevil says in the Temagami annual report for the year ended June 30.

ANNOUNCEMENT

MARKETING MANAGER
FRY-CADBURY LTD.

J. ROBERT BERRY

whose promotion to Marketing Manager was recently announced by J. E. B. Greeves, Chairman of the Board, Fry-Cadbury Ltd.

Born in Montreal, J. R. Berry was educated at Montreal High and McGill University, where he graduated with a B.Sc. Degree.

Prior to joining the Sales Department of Fry-Cadbury in 1953, he was engaged in widespread market research with a prominent Canadian textile company.

Years of Experience from Coast to Coast

Letter from London

by Adelphi

"War at any level will become more difficult and absurd . . ."

The New Year's Honors List has come and gone to the usual accompaniment of cheers, mild applause, keen disappointment and pretended boredom.

The inevitable criticisms are made that the selection lacks imagination, that too many politicians are rewarded and that sportsmen are left until the barrel has been scraped nearly to the bottom.

Field-Marshal Sir John Harding who took on the cruel and thankless task of governing the fiery island of Cyprus has now been given a peerage, but the Cyprus problem remains unsolved.

It is not without interest that Sir Hugh Foot who went from the tranquility of Government House in Jamaica to the inferno of Cyprus has wisely brought a new technique to the job.

By walking the streets unarmed and unguarded he has created a fresh approach.

But it remains to be seen whether the Cypriot agitators will ultimately regard the whole affair as courage or bluff.

Foot Family Remarkable Group

The Foot family is a remarkable one.

The father, Isaac Foot, was a fiery Liberal reformer. His eldest son Hugh chose the traditional path of the civil servant and rose to be governor of Jamaica, where he did much to plan the Caribbean Confederation.

Sir Hugh's brother Dingle, who was a Liberal until the Liberal party disintegrated, is now a Socialist MP.

If Sir Hugh succeeds in his Cyprus policy of man-to-man forthrightness, then the Foot family is bound to recover some of the influence exerted in the period of Isaac, the mighty reformer.

Sterling at Peak To Start Off '58

(Editor's Note: This column was written before the sudden resignation this week of Peter Thorneycroft from the Exchequer.)

It is not without interest that Britain entered 1958 with sterling at a new peak.

The rate against the U.S. dollar was $2.80 15/16, being the highest level reached since May 17, 1956.

There were some extraneous reasons for this high peak, but the fact remains that while government spending is only fractionally above the level of the previous year the revenue is coming in at a greater rate.

Yet there are bad patches on the general scene which are none the less hurtful because they are not of basic importance.

For example, the film industry continues to be badly hit by the advance of the all-conquering TV.

The living theatre, the cinema, the magazine and the newspaper are all bleeding from the wounds imposed by TV.

As a result the film addicts will have to wait for the mammoth screen epic of Macbeth which was on the J. Arthur Rank list.

This will not only relieve the studio of a heavy financial outlay, but will prevent a minor civil war with the Scots.

There are a large number of people in Scotland who claim that Lady Macbeth was much slandered by "Shakespeare the Sassenach," and that she was in fact a most hospitable and thoughtful hostess.

But while these academic discussions go on the crowd actors are informed that there is no work for them and even the leading actors are put out to graze.

Nevertheless, Britain's financial and industrial health continues to improve.

Can it then be assumed that Macmillan's popularity will steadily rise until, choosing his moment, he will ask for the mandate of the electorate which has never been given to him?

There is a traditional feeling in Britain that a prime minister who has never won the verdict of the electorate should go to the country as soon as circumstances allow.

General Election Certainty This Year

Therefore, I would think that a general election this year is almost a certainty.

But once again the question of nervous strain arises.

Can a British prime minister conduct affairs of state and lead the government in the House of Commons from day to day and yet find the necessary detachment for consideration of world problems?

It is true that Churchill did it in the war, but he had a Parliament united in purpose.

Also the strain of political leadership today has been intensified by the facilities of airplane travel.

The danger of Macmillan's political situation is that he will become "The Unknown Prime Minister."

Paris, Washington, London, and even Moscow may know him but in Manchester, Glasgow, Swansea or Sheffield he becomes a mere figure in the headlines or on the screen.

Despite the service of TV, Mr. Macmillan is not known to Britain as Churchill was when we could only listen to him on the radio.

In the meantime, Nye Bevan is behaving as if he not only intends to be the next tenant of No. 10, but has the key already in his pocket.

That Friday afternoon ovation, when Prime Minister Diefenbaker was looking on, is still ringing in Bevan's ears and he likes the sound of it.

Another such speech and another such ovation and Hugh Gaitskell will be off to the salt mines.

In such a setting there is a cruel irony in the announcement that Sir Anthony Eden has been loaned a country house nearer to London.

He is no longer big news, but there is the invariable front page photograph of him in his car looking weary in mind and body. The gods can be very relentless.

Great Politeness In London, Moscow

The arrival of the New Year has been marked by great politeness between London and Moscow.

It is now almost certain that there will be a foreign ministers' meeting between the West and Russia within the next few months.

These talks, it is understood, will be motivated so as to lead up to the concept of a neutralized zone in Central Europe, coupled with provisions for mutual inspection and control.

A powerful section of the British Labor Party has already come out with a pamphlet called: "A Neutral Belt in Europe?"

The pamphlet urges the evacuation of all East and West foreign forces, a banning of atomic weapons in the neutral zone, agreement for mutual inspection, maintenance of conventional forces, willingness by the western powers to use atomic weapons in a "limited atomic war" in the event of a breach of the neutral zone by Russia.

Massive Retaliation Not the Answer

The author of the pamphlet admits that the plan presents many problems and difficulties, but he claims that somehow or other the European powers must find an alternative to massive retaliation.

When he was charged with fathering a plan that would weaken NATO, he replied that NATO is disintegrating now before our eyes because it still remains frozen in the rigid posture it adopted in the days of Stalin.

In other words, peace is being waged in all directions and tempers are becoming more than a bit frayed as a result.

Nevertheless, there is a growing confidence that war at any level will become more and more difficult and absurd.

The age of sanity may be only 100 years away.

Go-Ahead Given Largest Of CP 'Empress' Liners

MONTREAL (Staff)—Continuing modernization of its passenger fleet, **Canadian Pacific Steamships** this week announced it had signed a $23 million contract with **Vickers Armstrongs** of England for construction of a new 27,500-ton "White Empress" liner.

The ship—as yet unnamed—will enter transAtlantic service in spring of 1961.

The new addition will raise CP's active passenger fleet to four vessels. The three sister ships are the Empresses of England, Britain and France.

A fifth passenger liner—Empress of Scotland—was de-commissioned last fall, is now resting in a Scottish "boneyard." Sale of the liner to German interests is being rumored, but has not been confirmed by the company.

Oldest liner of the CP fleet—Empress of France—this winter is scheduled to enter drydock for a major face-lifting and overhaul. The vessel, formerly the Duchess of Bedford—is a veteran of the transAtlantic run.

The new CP liner will have accommodation for 200 first and 875 tourist class passengers and will be air conditioned throughout. She will be the largest vessel of the CP fleet.

An appreciable amount of hull design and related matters have already been carried out at Vickers' ship-model experiment tank at St. Albans, Herts.

The liner will be built at Vickers' naval yard at Walker-on-Tyne while machinery will be built at Barrow-on-Furness.

BAD YEAR FOR STRIKES

A bad year for strikes in 1957. Department of Labor reports that for the first 11 months of 1957 there were 243 strikes and lock-outs involving 85,973 workers who lost 1,526,245 days. Comparable figures for 1956: 223 stoppages, 88,210 workers, 1,231,695 days lost. Strikes in B. C.'s pulp and paper and fishing industries accounted for 45% of the 191,125 days lost in November, result of 38 stoppages involving 12,321.

U.S. Tariff Findings Help Our Hardboards Industry

Special Correspondence

WASHINGTON, D.C. — U. S. has handed Canada a belated Christmas present.

Canadian hardboard is once again flowing unhindered across the border to the U. S. market.

The Tariff Commission has found that Canadian hardboard is not being dumped into U. S. as the U. S. Treasury Department had suggested.

Therefore, orders have been issued to U. S. Customs field officers to discontinue the withholding of appraisement on entries of hardboard from Canada and the Union of South Africa.

For years the domestic industry has been trying to keep out Canadian hardboard which has found a profitable market in U. S. Bills have been all but passed, statements issued and warnings voiced about the great danger of hardboard imports.

The domestic industry thought it had won last fall when Customs officers began to ban imports of hardboard pending a Treasury investigation.

The Treasury enquiry said hardboard was being dumped and it passed its recommendations on to the Tariff Commission.

Washington protectionists were sailing high with this recommendation. The Tariff Commission, however, took the wind out of the protectionist sails, by finding the Treasury Department wrong and therefore allowing hardboard to enter the U. S. market as before.

No Word Yet On Baloise Planning

No announcement has been made regarding over-all underwriting plans of **Baloise Fire Insurance Co. of Canada** which has been purchased by **Imperial Investment Corp.**, Vancouver. (See p. 14.)

Company was acquired to offer auto insurance facilities to dealers involved in the financing of autos through Imperial Investment.

Street rumors suggest, however, that Baloise may limit its future auto insurance sales to cars financed by Imperial Investment. It is also thought company may cease underwriting fire insurance and the various forms of other general insurance which it now sells.

Premium earnings on Baloise fire insurance account in 1956—latest year for which figures are available—came to $151,950.

Loss ratio (claims as a percent of premiums earned) was 88.23% as against the 55% average of all Canadian companies.

Premium earnings in 1956 on auto insurance reached $445,780. Loss ratio was 81.16% as against the Canadian average of 66.33%.

Until its purchase, Baloise of Canada was a wholly-owned subsidiary of the **Baloise Fire Insurance Co.** of Basle, Switzerland. It began operations in January, 1955, taking over the Canadian business of its parent organization.

Made $500,000 Crossing Rainbow

From Our Own Correspondent

NIAGARA FALLS — Rainbow Bridge, link between Canada and the U. S., realized $500,000 net profit during 1957.

The Bridge Commission has decided to retire bridge revenue bonds amounting to $250,000, thus reducing the debt to $800,000. Original debt was $4 million.
